SIR,

Navigation fince the discovery of America, it may well be thought strange that a very considerable part of the globe on which we live, should still have remained unknown; that it should still have been the subject of speculation, whether a great portion of the Southern Hemisphere is land or water; and, even where land had been discovered, that neither its extent nor sigure should have been ascertained. But the cause has probably been, that sovereign Princes have seldom any other motive for attempting the discovery of new countries than to conquer them, that the advantages of conquering countries which must first be discovered are remote and uncertain, and that ambition has always found objects nearer home.

It is the distinguishing characteristic of Your Majesty to act from more liberal motives; and having the best sleet, and the bravest as well as most able navigators in Europe, Your

# DEDICATION.

Majesty has, not with a view to the acquisition of treasure, or the extent of dominion, but the improvement of commerce and the increase and dissussion of knowledge, undertaken what has so long been neglected; and under Your Majesty's auspices, in little more than seven years, discoveries have been made, far greater than those of all the navigators in the world collectively, from the expedition of Columbus to the present time.

To have been appointed to record them, and permitted to inscribe the Narrative to Your Majesty, is an honour, the sense of which will always be retained with the warmest gratitude, by

YOUR MAJESTY's

T

# GENERAL INTRODUCTION.

TIS Majesty, soon after his accession to the crown, I formed a design of sending out vessels for making discoveries of countries hitherto unknown, and in the year 1764, the kingdom being then in a state of profound peace, he proceeded to put it into execution. The Dolphin and the Tamar were dispatched under the command of Commodore Byron, and the best account of his Majesty's motives and defign that can be given, will be found in the following preamble to Commodore Byron's instructions, which are

dated the 17th June in that year.

"Whereas nothing can redound more to the honour of this nation, as a maritime power, to the dignity of the · Crown of Great Britain, and to the advancement of the trade and navigation thereof, than to make discoveries of countries hitherto unknown; and whereas there is reason to believe that lands and islands of great extent, hitherto unvisited by any European power, may be ' found in the Atlantic Ocean, between the Cape of Good Hope and the Magellanic Streight, within the latitudes convenient for navigation, and in climates adapted to the produce of commodities useful in commerce; and where-'as his Majesty's islands called Pepys' Island, and Falk-'land's Islands, lying within the faid tract, notwithstanding their having been first discovered and visited by Bri-"tish navigators, have never yet been so sufficiently sur-"veyed as that an accurate judgment may be formed of "their coasts and product; his Majesty taking the premi-" ses into consideration, and conceiving no conjuncture so " proper for an enterprise of this nature, as a time of pro-"found peace, which his kingdoms at present happily en-"joy, has thought fit that it should now be undertaken."

The Dolphin was a man of war of the fixth rate, moun- 380 tone ting twenty four guns: her complement was 150 men, with three Lieutenants, and thirty-seven petty officers.

The Tamar was a floop, mounting fixteen guns: her complement was ninety men, with three Lieutenants, and

two and twenty petty officers, and the command of her

was given to Captain Mouat.

Commodore Byron returned in the month of May in the year 1766, and in the month of August following, the Dolphin was again sent out, under the command of Cap. tain Wallis, with the Swallow, commanded by Captain Carteret, in profecution of the same general design of making discoveries in the southern hemisphere. The equip. ment of the Dolphin was the same as before. The Swallow was a floop mounting fourteen guns; her complement was ninety men, with one Lieutenant, and twenty-two petty officers.

These vessels proceeded together till they came within fight of the South Sea, at the western entrance of the Streight of Magellan, and from thence returned by diffe

rent routs to England.

In the latter part of the year 1767, it was resolved, by the Royal Society, that it would be proper to send persons into some part of the South Sea to observe a transit of the planet Venus over the fun's life, which, according to astronomical calculation, would happen in the year 1769; and that the islands called Marquesas de Mendoza or those of Rotterdam or Amsterdam, were the propered

places then known for making fuch observation.

In consequence of these resolutions, it was recommend ed to his Majesty, in a memorial from the Society, dated February 1768, that he would be pleased to order such a observation to be made; upon which his Majesty signified to the Lords Commissioners of the Admiralty his pleasure that a ship should be provided to carry such observers as the king Society should think fit to the South Seas; and in the beathese ginning of April following, the Society received a letter cour from the Secretary of the Admiralty, informing them that ome a bark of three hundred and feventy tons had been taken up for that purpose. This vessel was called the Endeavour, Com and the command of her given to Lieutenant James Cook, and a gentleman of undoubted abilities in astronomy and navi-purp gation, who was foon after, by the Royal Society, appointed, with Macharles Green, a gentleman who had long have been affistant to Dr Bradley at the Royal bservatory at her v Greenwich, to observe the transit.

While this vessel was getting ready for her expedition, ther is

Captain Wallis returned; and it having been recommended to him by Lord Morton, when he went out, to fix on a proper place for this astronomical observation, he, by letter, dated on board the Dolphin, the 18th of May 1768, the day before he landed at Hastings, mentioned Port Royal harbour, in an island which he had discovered, then called George's Island, and since Otaheite: the Royal Society, therefore, by letter, dated the beginning of June, in answer to an application from the Admiralty to be informed whither they would have their observers sent, made choice of that place.

The Endeavour had been built for the coal trade, and a vellel of that construction was preferred for many reasons, the particularly because she was what the failors call a good sealiffe boat, was more roomy, would take and lie on the ground better, and might be navigated by fewer men than other

, by vessels of the same burden. Her complement of officers and men was Lieutenant ansit Cook the Commander, with two Lieutenants under him, ding a Master and Boatswain, with each two mates, a surgeon and carpenter, with each one mate, a gunner, a cook, a derk and steward, two quarter-masters, an armourer, a perel fail-maker, three midshipmen, forty-one able seamen, twelve marines, and nine servants, in all eighty four persons beides the Commander: she was victualled for eighteen nend dated months, and took on board ten carriage and twelve swivel ch at guns, with good store of ammunition and other necessaries. nified The Endeavour also, after the astronomical observation hould be made, was ordered to profecute the design of maeafun as the ting discoveries in the South Seas. What was effected by ne be these vessels in their several voyages, will appear in the letter course of this work, of which it is now necessary to give n that ome account.

taken It is drawn up from the journals that were kept by the avour Commanders of the several ships, which were put into my Cook hands by the Lords Commissioners of the Admiralty for that navi-purpose: and, with respect to the voyage of the Endeavour, point rom other papers equally authentic; an affiliance which I long have acknowledged in an introduction to the account of ory at her voyage.

When I first undertook the work, it was debated, whedition, ther it should be written in the first or third person: it was b 2 readily

readily acknowledged on all hands, that a narrative in the first person would, by bringing the Adventurer and the Reader nearer together, without the intervention of a stran. ger, more strongly excite an interest, and consequently af. ford more entertainment; but it was objected, that if it was written in the name of the several Commanders, I could exhibit only a naked narrative, without any opinion or fentiment of my own, however fair the occasion, and without noting the fimilitude or diffimilitude between the o. pinions, customs or manners of the people now first discovered, and those of nations that have been long known, or remarking on any other incident or particular that might occur. In answer to this objection, however, it was said, that as the manuscript would be submitted to the gentlemen in whose names it would be written, supposing the narrative to be in the first person, and nothing published without their approbation, it would fignify little who conceived the sentiments that should be expressed, and therefore I might still be at liberty to express my own. In this opinion all parties acquiesced, and it was determined that the narrative should be written in the first person, and that I might notwithstanding intersperse such sentiments and observations as my subject should suggest: they are not indeed numerous, and when they occur, are always curfory and short; for nothing would have been more absurd than to interrupt an interesting narrative, or new descriptions, by hypothesis and differtation. They will however be found most frequent in the account of the voyage of the Endeavour, and the principal reason is, that although it stands last in the series, great part of it was printed before the others were written, so that several remarks, which would naturally have been suggested by the incidents and descriptions that would have occurred in the preceding voyages, were anticipated by fimilar incidents and descriptions which occurred in this.

Some particulars that are related in one voyage will perhaps appear to be repeated in another, as they would necessarily have been if the several Commanders had written the account of their voyages themselves; for a digest could not have been made of the whole, without invading the right of each navigator to appropriate the relation of what he

he had feen: these repetitions however taken together will be found to fill but a few pages of the book.

That no doubt might remain of the fidelity with which I have related the events recorded in my materials, the manuscript account of each voyage was read to the respective Commanders at the Admiralty, by the appointment of Lord Sandwich, who was himfelf present during much the greatest part of the time. The account of the voyage of the Endeavour was also read to Mr Banks and Dr Solander, in whose hands, as well as in those of Captain Cook, the manuscript was left for a considerable time after the reading. Commodore Byron also, Captain Wallis, and Captain Carteret, had the manuscripts of their respective voyages to peruse, after they had been read at the Admiralty in their presence, and such emendations as they fuggested were made. In order thus to authenticate the voyage of Captain Cook, the account of it was first written, because it was expected when his journal was put into my hands, that he would have failed on the voyage he

is now making in less than five months.

It will probably be thought by many Readers, that I have related the nautical events too minutely; but it must be remembered, that minutely to relate these events was the great object of the work. It was in particular thought necessary to insert the situation of the ship at different hours of the day, with the bearings of different parts of the land while she was navigating seas, and examining shores that hitherto have been altogether unknown, in order to ascertain her track more minutely than could be done in any chart, however large the scale, and to describe with critical exactness the bays, headlands, and other irregularities of the coast; the appearance of the country, its hills, vallies, mountains, and woods, with the depth of water, and every other particular that might enable future navigators easily to find, and safely to visit every part of it. I was not indeed myself sufficiently apprised of the minuteness that was necessary in this part of the work, so that I was obliged to make many additions to it, after I had prepared my manuscript. It is however hoped, that those who read merely for entertainment will be compensated by the description of countries which no European had before visited, and manners which in many instances exhibit

a new picture of human life. In this part, the relation of little circumstances requires no apology, for it is from little circumstances that the relation of great events derives its power over the mind. An account that ten thousand men perished in a battle, that twice the number were swallowed up by an earthquake, or that a whole nation was swept away by a pestilence, is read in the naked brevity of an index, without the least emotion, by those who feel themselves strongly interested even for Pamela, the imaginary heroine of a novel that is remarkable for the enumeration of particulars in themselves so trisling, that we almost wonder how they could occur to the author's mind.

This work is illustrated and adorned by a great number of cuts, from which every class of readers, whether their object is knowledge or pleasure, will find equal advantage, as they consist not only of maps and charts, drawn with great skill and attention, but of views and figures, design-

ed and executed by the best artists in this country.

The most effectual way to prevent obscurity and confusion in relating events, is to range them in order of time, which however cannot be done in an unbroken series when the complicated and multifarious objects of history are to be recorded; but as each of the narratives in this work is a single thread, the transactions of every day are set down in a regular succession, and the time noted in the beginning

of the paragraphs.

Great care has been taken to make the charts and the nautical part of the narrative coincide; if there should be any difference, which it is hoped will not be the case, the charts are to be consided in, as of unquestionable authority. By the charts as well as by the narrative, especially by that on which the tracks of the several vessels are marked, it will be seen how far the existence or non-existence of a southern continent is already ascertained, and what land has in the course of these voyages been discovered. The charts also will at one view prevent any mistake which might arise from the same name having been given to different islands by the several Commanders in these voyages, without the trouble of comparing the latitudes and longitudes assigned them in the narrative.

As it is but a very few years fince the existence of a race of men above the common stature upon the coast of Patagonia,

gonia, was the subject of eager dispute among all ranks of people in this country, I have brought together the whole of the evidence on the question, as I find it in a collection of voyages lately printed in France, under the title of " Hif-

toire des Navigationes aux Terres Australes."

" It must be acknowledged, that the contrarity of the reports that have been made, by ocular witnesses, concerning a fact easy to be determined, does not deviate less from the common course of things than the gigantic stature of the people in question. It appears, that during an hundred years, almost all navigators, of whatever country, agree in affirming the existence of a race of giants upon the coast of Patagonia; and that during another century, the much greater number agree in denying the fact, treating their predecessors as idle fabulists, and imputing their reports either to the terror which the rude sierceness of a savage people inspired, or to the natural propensity of mankind to assume importance, by pretending to have seen wonderful things. That men have a strange propensity to the marvellous cannot be denied, nor that fear naturally magnifies its object; but though it be allowed that the accounts of the Patagonians have in some instances been exaggerated, it is certain, that all who have affirmed their flature to be gigantic, were not under the influence of fear; and it is very strange, that nations who have an hereditary. hatred to each other, and an acknowledged opposition of interest, should agree in afferting an evident falsehood,

In the first place it is well known to have been an opinion long established, both in our ancient world and in America, that there was once a race of giants upon earth

who distinguished themselves by violence and guilt.

"Barbenais was told by the inhabitants of South America, that a deluge having laid Peru under water, the Indians retired to the mountains till the flood should subside, and that when they came again down to the plain, they found there men of an enormous stature, who attacked lands them with great ferocity, killing many, and driving the rell to the caves of the rocks; but that having continued in their hiding-places many years, they faw in the air a young man who had destroyed the giants by thunderbolts, and thus restored to them the possession of their country. His guides also shewed him many marks upon a rock

a race Pataronia,

which they said were impressed by the thunderbolts, and many bones of an extraordinary size, which they believed to be remains of the giants; but they did not pretend to

know when the deluge happened.

"The Ynca Garcilasso de la Vega, in his history of Peru, relates, that according to a tradition universally received, a number of vessels or junks came to point Saint Helena with a company of giants on board, of a stature so enormous that the natives of the country were not higher than their knees: that their eyes were as broad as the bottom of a plate, and their limbs proportionably large: that fome of them were naked, and others flightly covered with the skins of beasts. That when they came on shore, they dug a pit of an astonishing depth in the rock, and each of them confuming as much provisions as would be sufficient for fifty men, the country was soon exhausted, and they were obliged to live upon fish: that they seized the women of the country, to whom their brutality was fatal, and afterwards giving themselves up to worse vices, the whole race was deltroyed by fire from heaven, which however left their bones unconfumed, as a lasting memorial of Divine vengeance. Bones of an amazing fize are faid to have been found in this country, and fragments of teeth, which, if they were whole, must have weighed half a pound.

"Those who wish to know all the particulars of these American traditions may fatisfy their curiofity by reading Torquemado, lib. 1. chap. 13 and 14. where they will find that these fables are very similar to those relative to the same subject in other parts of the world. The bones, said to have been the bones of giants, which have been found in America, and which were shewn at Mexico and other places in the year 1550, are probably the bones of some animal unknown; and indeed nothing less than the fight of fuch a race of human beings, or of an entire skeleton, can be admitted as a proof of their existence. Turner, the naturalist, reports, that in the year 1610, the thigh bone of a man was shewn in London, who must have been of an enormous fize; but this testimony is not decisive, though the author adds, that he had himself seen near the river Plata, upon the coast of Brazil, a race of giants who went stark naked; that the hinder part of their heads was flat, and

not round; that the women had long black hair, as coarse as a horse's mane; that the men were excellent archers, and, besides their bow and arrows, carried two massive balls or bullets, each sastened to one end of a thong, a weapon which they used with great dexterity and force, either by striking with it, or throwing it like a stone from a sling. One of these giants, he says, was twelve feet high; but acknowledges that he saw no other so tall.

" Of this fact there are other ocular witnesses who perhaps may be thought more worthy of credit; among the Spaniards, Magellan, Loaifa, Sarmiento, and Nodal; among the English, Cavendish, Hawkins, and Knivet; among the Dutch, Sebald, de Noort, le Maire, and Spilberg; and among the French, those who went in the expedition from Marfeiles and Saint Maloes. Those who bear testimony to the contrary, are Winter, the Dutch Admiral Hermite, Froger in de Gennes's narrative, and Sir John Narborough. Winter, after having himself seen the inhabitants of Patagonia, fays in direct terms, that the accounts of their being giants are falsehoods invented by the Spaniards; and it must be confessed that the testimony of these navigators at least counterbalances the evidence on the other fide, especially as they were best acquainted with the Streight of Magellan, and the neighbouring country. Such navigators as have vifited this country, and are filent with respect to the stature of the inhabitants, particularly Sir Francis Drake, must be considered as witnesses against the fact in question; for their silence is a proof that they saw nothing extraordinary. It must however be observed, in the first place, that the greater part of those who hold the affirmative in this question, speak of people that inhabited the defert coast of Patagonia to the east and west; and that, on the contrary, those who hold the negative, speak of those who inhabit the Streight upon the sides of the utmost point of America to the northand fouth. The nations of these two districts are certainly not the same; and if the first have sometimes been seen in the Streight, it cannot be thought strange, considering how short the distance is from Port Saint Julian, which appears to be their ordinary habitation. Magellan, and his people saw them there very often, and trafficked with them sometimes on board his ships, and sometimes on shore;

nor was this all, he seized two of them, and kept them prisoners in his vessel, one of whom was baptized some time before his death, and taught several words of his language to Pigasette, who formed them into a little dictionary: these are facts than which nothing can be more

politive, or less subject to illusion.

" I affirm, fays Knivet, that when I was at Port Defire I measured several dead bodies that I found buried there, which were from fourteen to fixteen spans high, and saw tracks in the fand which must have been left by people of nearly the same stature. I have also frequently seen at Brazil, one of the Patagonians who had been taken at Port Saint Julian, and though he was but a youth, he measured no less than thirteen spans: and our English prifoners at Brazil have affured me that they had seen many men of the same stature upon the coasts of the Streight." Sebald de Wert says, that when he was in the Streight, he saw giants of the same bulk, who tore up trees by the roots, that were a span in diameter, with great facility; he also faw women that were gigantic, and others of the common stature. Oliver de Noort reports, that he saw savages of a gigantic stature at Port Desire, but does not call them giants: that he took fix of them prisoners, and carried them on board his ship, one of whom afterwards told him that the country was inhabited by many different nations, four of which were of the ordinary stature; but that farther within the land, in a territory called Coin, there was a gigantic people, distinguished by the name of Tiremenen, who were continually making war upon the other nations. Spilberg relates, that he saw a man of an extraordinary stature upon the coast of Terra del Fuego, but that the sepulchres which he found, had received men of the common height. Aris-Clasz, who was on board La Maire's fleet in the character of Commissary, a man well worthy of credit, declares, that having vifited the fepulchres which he discovered upon the coast of Patagonia, he found the bones of men who were between ten and eleven feet high, which convinced him that the reports of former navigators were true; and here it must be confessed that the examination was made in cold blood, when it cannot be pretended that the object was magnified by fear. Some others, particularly Nodal and Sir Richard Hawkins, content

em ine his dicore Deere, faw e of at at he priany nt." ght, the ity; the r fanot and ards rent but Join, e of the f an ego, en of La well pul-, he even rmer that nnot ome

con-

tent

ent themselves with saying that these savages were a head aller than the inhabitants of Europe, and of such a stature hat the people on board their vessels called them giants. Such is the evidence of past times; we shall now consider hat of the age in which we now live. In 1704, the Captains Harrington and Carman, who commanded two French ressels, one from Saint Maloes, and the other from Mareilles, saw at one time seven of these giants in Possession Bay, at another time fix, and at a third time they had an nterview with a company of more than four hundred men, part of whom were gigantic, and part of the common staure. That Harrington and Carman reported this fact, is ttested by M. Frezier, superintendent of the fortifications f Bretagne, a man well known, and universally esteemed. Frezier never saw any of these savages himself, but he says, hat being upon the coast of Chili, Don Pedro Molina, Governor of the isle of Chiloe, and many other eye-witeffes, told him, that there was at a confiderable distance vithin the country, an Indian nation, called by their eighbours Caucobues, who sometimes came down to the spanish settlements, that were more than nine feet high, nd were the same race with the Patagonians who live on he eastern coast, and have been mentioned in førmer relaons. We are told by Reaveneau de Lussan, that the paniards who live upon the sea coast in South America, eport that certain white Indians inhabit part of Chili, ith whom they are always at war: that they are of an normous bulk and stature, and that whenever they ake a Spaniard prisoner, they force up the breast-bone, they would the shell of a tortoise, and tear out his heart. arborough, on the contrary, though he agrees that the ndians who inhabit the mountains near the Spanish settleents at Chili, and perpetually commit hostilities against nem, are tall, expressly denies that their stature is giganc. He had often measured the skulls and the prints of he feet of the savages on the coasts of the Streight of lagellan, which, he says, were of the common fize: he ad also several times seen numerous companies of them en at Port Saint Julian, and these he declares not to be ller or bigger than other men. Narborough is certainly credible witness, and his evidence is directly to the point: 18 confirmed by that of L'Hermite, who fays, that the people

people he saw upon the coast of Terra del Fuego, though they were robust and well-proportioned, were not larger than the inhabitants of Europe; and lastly M. de Gennes bears testimony that none of the people he saw at Port Famine were six feet high.

"Those who diligently consider these different relations will find reason to believe, that all the parties have spoken truth, each of them faithfully reporting what he saw, and therefore that the existence of a gigantic race in these parts is a real fact, not to be questioned merely because they were not seen by every mariner that visited the country.

"It appears to be well established, that the inhabitant of the two borders of the Streight are of the common sta ture; and that the race distinguished by the name of Pa tagonians, made their constant residence upon the desar coasts, either in some miserable hovels in the depth of the woods, or in some caverns of the rocks, scarcely accessible to any but themselves: and it appears from the account of Oliver de Noort, that when the Streight began to be fre quented by European vessels, they hid themselves as soo as the ships were in fight, which accounts both for the not being feen, and for the recent marks of inhabitant upon a coast that appeared to be desart. Perhaps the fre quent appearance of our ships upon this coast, at lengt determined them to quit it as a settled habitation, retun ing only at particular seasons of the year, and taking u their constant residence in the interior part of the country Lord Anson was of opinion, that they resided statedly the western side of the Cordeliers, and visited the easter fide occasionally, but not often: so that if they have bee rarely seen by the vessels which have touched at the con of Patagonia for the last hundred years, the reason probab ly is, that being, like other Indian nations, desirous conceal themselves from strangers, they retired to the mountains. It is indeed to be regretted, that no skeleto of these people has been brought into Europe; and it ma at first feem strange, that no such evidence of their uncon mon stature should have been produced, as it is know that several of them who had been made prisoners by the Commanders of European vessels, died on board soon after they came into a hot climate; but the wonder will ceal when it is considered that all mariners have a superstition opinio

themselves,

pinion that the compass will not traverse if there is a dead ody on board the vessel." Upon the whole, it may reaonably be presumed, that the concurrent testimony of late avigators, particularly Commodore Byron, Captain Walis, and Captain Carteret, Gentlemen of unquestionable veacity, who are still living, and who not only faw and conersed with these people, but measured them, will put an nd to all the doubts that have been hitherto entertained f their existence.

Having thus brought together the whole of the evidence or and against a fact which has long been the object both f popular and philosophical curiofity, I shall not anticiate any opinion that the Reader may form concerning fuure navigations in the tract which has been described by ny of the vessels whose voyages are here related, except hat although it is the opinion of Commodore Byron, who pent seven weeks and two days in passing through the treight of Magellan, that it may be passed in three weeks t the proper season; yet the passage cost Captain Wallis ear four months, though he performed it precisely at the ime recommended by the Commodore, having reached the aftern entrance about the middle of December.

I cannot however dismiss my Readers to the following arratives, without expressing the regret with which I have ecorded the destruction of poor naked savages, by our re-arms, in the course of these expeditions, when they ndeavoured to repress the invaders of their country; a reret which I am confident my Readers will participate with ne: this however appears to be an evil which, if discoveies of new countries are attempted, cannot be avoided: efistance will always be made, and if those who resist are ot overpowered, the attempt must be relinquished. It hay perhaps be said, that the expence of life upon these ccasions is more than is necessary to convince the natives hat farther contest is hopeless, and perhaps this may someimes have been true: but it must be considered, that if uch expeditions are undertaken, the execution of them hust be intrusted to persons not exempt from human fraily; to men who are liable to provocation by fudden injury, o impremeditated violence by fudden danger, to error by he defect of judgment or the strength of passion, and alrays disposed to transfer laws by which they are bound opinio

themselves, to others who are not subject to their obligathat tion; so that every excess thus produced is also an inevi

If it should be said, that supposing these mischiefs to be inevitable in attempting discoveries, discoveries ough not to be attempted; it must be considered, that upon the only principles on which this opinion can be support and ed, the risk of life, for advantages of the same king erve with those proposed in discovering new countries, is i every other instance unlawful. If it is not lawful to pur rev the life of an Indian in hazard, by an attempt to examin side the country in which he lives, with a view to increal erp commerce or knowledge; it is not lawful to risk the lift fer of our own people in carrying on commerce with countrie over already known. If it be faid that the rifk of life in ou han own people is voluntary, and that the Indian is brough tem into danger without his consent, the consequence will fill edg follow; for it is universally agreed, at least upon the prin ciples of Christianity, that men have no more right ow their own lives than over the lives of others, and suicide be ing deemed the worlt species of murder, a man must be pro portionably criminal in exposing his own life, for any pur pole that would not justify his exposing the life of another arti If the gratification of artificial wants, or the increase of his knowledge, are justifiable causes for the risk of life, the phic landing by force on a newly discovered country, in order ame to examine its produce, may be justified; if not, ever one trade and profession that exposes life for advantages of the be same kind is unlawful; and by what trade or profession Chri is not life exposed? Let us examine all the multitudes the with art has employed, from the refiner who sweats at the fur nace to the fedentary artificer who grows pale at the loom and perhaps none can be found in which life is not in som degree facrificed to the artificial necessities of civil society But will it therefore be said, that civil society, to which this sacrifice is made, is for that reason a combination con seive trary to the great original principles of morality, which wil? are the basis of all duty? Will it be said, that to exercise the faculties which are the distinguishing characteristics of our nature is unnatural? and that being endowed with the various powers which in civil societies only can be brough into action, it was incongruous to the will of our Creator

hat any such society should be formed, and that it would be pleasing to him if, still continuing in a savage state, hese powers should lie torpid in our nature, like life in an only on the whole of our existence? This surely nust appear extravagant and absurd in the highest degree, specially as it must be allowed, that although commerce and arts in some instances expose life, in others they prevent it; they supply the wants of Nature, without rapine and violence, and by producing a common interest, they revent the inhabitants of the same country from being dided in different claus, which among savages are almost created in the same of the same country from the prevent the inhabitants of the same country from the same created in the same of the same country from the same country from being dided in different claus, which among savages are almost created in the same country same has been same and literary knowledge have meliorated the same reasonable to conclude, that the increase of knowledge and commerce are ultimately common benefits; and print that the loss of life which happens in the attempt, is among the partial evils that terminate in general good.

de be I have now only to request of such of my Readers as e pro may be disposed to censure me for not having attributed put my of the critical escapes that I have recorded, to the other articular interposition of Providence, that they would, in ase his particular, allow me the right of private judgment, , the which I claim with the greater confidence, as the very order ame principle which would have determined them to have ever one it, has determined me to the contrary. As I firmof the y believe the divine precept delivered by the Author of Christianity, "there is not a sparrow falls to the ground ithout my Father," and cannot admit the agency of fur hance in the government of the world, I must necessarily loom efer every event to one cause, as well the danger as the som scape, as well the sufferings as the enjoyments of life: ciety and for this opinion, I have, among other respectable auwhich horities that of the bible. "Shall we," fays Job, " recon leive good from the hand of God and shall we not receive which wil?" The Supreme Being is equally wife and benevolent ercile in the dispensation of both evil and good, as means of efch the ions; so that whether we consider ourselves as christians ought or philosophers, we must acknowledge that he deserves reated sleffing not more when he gives than when he takes away.

If the fall of a sparrow, as well as its preservation, is imputed to Providence, why not the fall as well as the prefervation of a man? and why should we attribute to Providence only what appears to be good in its immediate ef. fect, when we suppose that the whole concatenation of events, whether the preservation or destruction of particu. lar parts, tends ultimately to the good of the whole? The same voice commissions the wind to plough up the deep, which at the appointed time rebukes them, faying, " Peace, be still." If the adorable author and preserver of Nature was such a being as Baal is represented to have been by the prophet, when he derided his worshippers; if he was sometimes on a journey, and sometimes asleep, we might with propriety say that a fire bappened to break out, or a storm to rise, but that by the interposition of Providence life was preserved, expressions which imply that the mischief had one origin, and the remedy another; but fuch language certainly derogates from the honour of the great Universal Cause, who, acting through all duration, and sublisting in all space, fills immensity with his presence, and eternity with his power.

It will perhaps be said, that in particular instances evil necessarily results from that constitution of things which is belt upon the whole, and that Providence occasionally interferes, and supplies the defects of the constitution in these particulars: but this notion will appear not to be supported by those facts which are said to be providential; it will always be found that Providence interposes too late, and only moderates the mischief which it might have prevented. But who can suppose an extraordinary interposition of Providence to supply peculiar defects in the constitution of nature, who sees those defects supplied but in part? It is true that when the Endeavour was upon the rock off the coast of New Holland, the wind ceased, and that otherwise she must have been beaten to pieces; but either the subsiding of the wind was a mere natural event or not; if it was a natural event, Providence is out of the question, at least we can with no more propriety say that providentially the wind ceased, than that providentially the fun rose in the morning. If it was not a mere natural event, but produced by an extraordinary interpolition, correcting a defect in the constitution of nature, tending to mischief,

mischief, it will lie upon those who maintain the position, to shew, why an extraordinary interposition did not take place rather to prevent the ship's striking, than to prevent her being beaten to pieces after she had struck: a very flight impulse upon the ship's course would have caused her to steer clear of the rock, and if all things were not equally easy to Omnipotence, we should say that this might have been done with less difficulty than a calm could be produced by suspending the general laws of Nature which had brought on the gale.

I have, however, paid my homage to the Supreme Be-; if ing, consonant to my own ideas of his agency and perfections; and those who are of opinion that my notions are erroneous, must allow, that he who does what he thinks to be right and abstains from what he thinks to be wrong. acquits himself equally of moral obligation, whether his opinions are false or true.

CEMERAL INTRODUCTION

# EXPLANATION of the NAUTICAL TERMS

not generally understood, which occur in this Work.

A.

A BACK, the situation of the sails when their surfaces are slatted against the masts by the force of the wind. The sails are said to be taken aback, when they are brought into this situation, either by a sudden change of the wind, or by an alteration in the ship's course. They are laid aback, to effect an immediate retreat, without turning to the right or left; in order to avoid some danger.

ABAFT, the hinder part of a thip.

AFI, behind, or near the stern of the ship.

ANCHOR, the principal are the sheet anchor, the best bower and the small bower, so called from their situation in the ship's bows. The smaller anchors, are the stream anchor, the kedge anchor, and the grappling.

AWNING, a canopy of canvass extending over the decks of a ship

in hot weather.

AZIMUTH-Compass, an instrument employed to discover the magnetical azimuth or amplitude of any heavenly object. This operation is performed at sea, to find the exact variation of the magnetical needle.

B.

To BALANCE, to contract a sail into a narrower compass, in a storm, by retrenching or folding up a part of it at one corner.

BEAMS, strong thick pieces of timber, stretching across the ship from side to side, to support the decks, and retain the sides at their proper distance. On the weather beam, is on the weather side of the ship.

To BELAY, to fasten a rope by winding it several times round a

eleat, belaying-pin, or kevel.

BENDING a fail, fastening it to its yard or stay.

BIGHT, the double part of a rope when it is folded, in contra-

BIGHT, is also a small bay between two points of land.

BULGE, or BILGE, that part of the floor of a ship, on either side of the keel, which approaches nearer to an horizontal than to a perpendicular direction, and on which the ship would rest if laid on the ground: or more particularly, those parts of the bottom which are opposite to the heads of the floor-timbers amidships on each side of the keel. Hence, when a ship receives a fracture in this place, she is said to be bilged.

BIRTH, the station in which a ship rides at anchor.

B

BIRTH, also signifies the room or apartment where any particular number of the officers or ship's company usually mess and reside.

BOARD, the line over which the ship runs between tack and tack, when she is turning to windward, or sailing against the direction of the wind.

BOW, the rounding part of a ship's side forward, beginning at the place where the planks arch inwards, and terminating where they close at the stern or prow.

BREAKERS, billows that break violently over rocks lying under the furface of the sea.

To BRING-TO, to check the course of a ship when she is advancing, by arranging the sails in such a manner as that they should counteract each other, and prevent her either from retreating or moving forward. In this situation the ship is said to lie-by, or lie-to. BULK-HEADS, certain partitions, or walls, built up in several

places of a ship between two decks, either lengthways or across, to form and separate the various apartments.

BUOY, a fort of closs cask, or block of wood, fastened by a rope to the anchor, to determine the place where the anchor is situated.

CABLE's length, a hundred and twenty fathom.

place,

RTH

CAP, a strong, thick block of wood, used to confine two masts together, when the one is erected at the head of the other, in order to lengthen it. It is for this purpose furnished with two holes perpendicular to its length and breadth, and parallel to its thickness; one of these is square, and the other round; the former being solidly sixed upon the upper end of the lower mast, whilst the latter receives the mast employed to lengthen it, and secures it in this position.

CAPSTERN, or CAPSTAN, a strong, massy column of timber, formed like a truncated cone, and having its upper extremity pierced with a number of holes to receive the bars or levers. It is let down perpendicularly through the decks of a ship, and is fixed in such manner, that the men, by turning it horizontally with their bars, may perform any work which requires an extraordinary effort.

CASTING, the motion of falling off, so as to bring the direction of the wind on either side of the ship after it had blown for some time right a-head.

GHAINS, strong links or plates of iron, the lower ends of which are bolted through the ship's side to the timbers. They are placed at short distances from each other on the ship's outside, as being used to contain the blocks called dead-eyes, by which the strongs of the masts are extended.

CHEEKS of the mast, the faces or projecting parts on each side of the masts, used to sustain the frame of the top, together with the top-mast, which rests immediately upon them.

CLAWING, or CLAWING-OFF, the act of beating or turning to windward from a lee shore, so as to acquire a sufficient distance from it, to escape the dangers of ship-wreck.

CLEATS, pieces of wood of different shapes, used occasionally to fasten ropes upon in a ship.

CLENCH,

CLENCH, or CLINCH, that part of a cable, or other rope, which is fastened to the ring of the anchor.

To CLEW, or CLUE-UP, to truss the fails up to the yards by

tackles fastened to their lower corners, called their clues.

CLOSF upon a wind, or CLOSE-HAULED, the general arrangement or trim of a ship's fails, when she endeavours to make a progress in the nearest direction possible towards that point of the compass from which the wind blows.

COCKSWAIN, or Coxen, the officer who manages and steers a

boat, and has the command of the boat's crew.

or stair-case of the master's cabbin in a merchant ship.

COURSES, a name by which the principal fails of a ship are usu-

ally distinguished, viz. the main-sail, fore-sail, and mizen.

CRANK, the quality of a ship which for want of a sufficient quanty of ballast or cargo, is rendered incapable of carrying sail without being exposed to the danger of overturning.

D.

- Half-DECK, a space under the quarter-deck of a ship of war, contained between the foremost bulk head of the steerage and the forepart of the quarter-deck.

of the water, by a storm or current; it is generally expressed of a

thip when broken loose from her anchors or moorings.

E,

To EDGE away, to decline gradually from the shore, or from the line of the course which the ship formerly steered.

F.

FALL, the loofe end of a tackle; or that part upon which the people pull, or hoift, to produce the required effect.

To FILL, to brace the fails in such a manner, as that the wind, entering their cavities from behind, dilates them so as to advance

the ship in her course.

FISH, is a long piece of oak, convex on one side, and concave on the other. It is used to fasten upon the outside of the lower mast, as an additional security, to strengthen them when it becomes necessary to carry an extraordinary pressure of fail. The sishes are also employed for the same purpose on any yard, which happens to be sprung or fractured.

FLAW, a fudden breeze, or gust of wind.

FLOOR, the bottom of a ship.

FOOT of a fail, lower edge or bottom.

FOOT-ROPE, the rope to which the foot of a fail is fewed.

FORE, all that part of a ship's frame and machinery which lies

near the head.

GAFF, a fort of boom or pole, used to extend the upper edge of the mizen. The foremost, or inner extremity of it, is furnished with two cheeks forming a semicircle, which inclose the after-part of the mast so as to confine the gast closeto its respective mast, whilst the sail is hoisting or lowering.

GANGWAY, a narrow platform, or range of planks, laid horizon

ontally along the upper part of the ship's side, from the quarter-deck o the fore-calle, for the convenience of walking more expeditious-

y fore and aft, than by descending into the waist.

GANGWAY, is also that part of a ship's side, both within and without, by which the passengers enter and depart. It is for this urpose provided with a sufficient number of steps, or cleats, nailed pon the ship's side, nearly as low as the surface of the water; and ometimes furnished with a railed accommodation-ladder, whose lower nd projects from the ship's side, being secured in this position by ron braces, fo as to render the afcent and defcent convenient.

GRAPPLING, a small anchor, fitted with four or five flukes or

laws, commonly used to ride a boat or other small vessel.

GUNNEL, or GUNWALE, the upper edge of a ship's side.

HANDING the fails, rolling them up close to the yard or mast to hich they belong.

HAMMACOES, the same with Hammoc.

To HAUL, an expression peculiar to seamen, implying to pull a ingle rope, without the affistance of blocks, or other mechanical owers.

To HAUL the wind, direct the ship's course nearer to that point f the compass from which the wind arises.

HAWSER, a large rope which holds the middle degree between

he table and tow-line.

0

HEAVING short, is the drawing so much of the cable into the hip, by means of the capstern or windlas, as that by advancing, she ill be almost perpendicularly above the anchor, and in a proper siuation to fet fail.

HEAVING taught, the act of heaving about the capstern, till the ope applied thereto becomes streight and ready for action.

To HEEL, to stoop or incline to either side.

HUMMOCK, a little hill.

JERKED, cured with falt.

GIB, or JIB-BOOM, a boom run out from the extremity of the owsprit, parallel to its length, and serving to extend the bottom of he jib, and the stay of the fore-topgallant-mast.

KEDGE, a small anchor, used to keep a ship steady whilst she ides in a harbour or river.

False KEEL, a strong, thick piece of timber, bolted to the main ul to preserve its lower-side.

KNEE, a crooked piece of timber, having two branches or arms, and generally used to connect the beams of a ship with her sides or imbers.

A Souciares Very

LAGOON, a lake.

LARBOARD, the left side of a ship when the eye of a spectator s directed forward.

LASHING, a piece of rope employed to fasten or secure any moveable body in a ship, or about her masts, sails, and rigging; also the act of fastening or securing any thing by means of the rope used

for this purpose.

LOG, a machine used to measure the ship's head-way, or the rate of her velocity as the advances through the fea. It is composed of a ree! and line, to which is fixed a small piece of wood, forming the quadrant of a circle. The term 1 g however is more particularly applied to the latter. The log, is generally about a quarter of an inch thick, and five or fix inches from the angular point to the circumference. It is balanced by a thin plate of lead, nailed upon the arch, fo as to swim perpendicularly in the water, with about two thirds impressed under the surface. The line is fastened to the log by means of two legs, one of which passes through a hole at the corner, and is knotted on the opposite side; whilst the other leg is attached to the arch by a pin, fixed in another hole, so as to draw out occasionally. By these legs the log is hung in equilibrio, and the line, which is united to it, is divided into certain spaces, which are in proportion to an equal number of geographical miles, as a half minute or quarter minute is to an hour of time.

LUG-SAIL, a square sail, hoisted occasionally on the mast of a boat, or small vessel, upon a yard which hangs nearly at right angles

with the mast.

M

To MAKE the land, is to discover it from a distant situation, in consequence of approaching it after a sea-voyage.

MIZEN, the aftermost or hindmost of the fixed sails of a ship.

MOORING, the act of confining and securing a ship in a particular station, by chains or cables, which are either sastened to the adjacent shore, or to anchors in the bottom.

N.

NEAPED, the fituation of a ship which is left aground on the height of a spring-tide, so that she cannot be floated off till the return of the next spring.

OFFING, implies out at sea; or at a competent distance from

the shore, and generally out of anchor-ground.

open, is expressed of any distant object, to which the sight or passage is not intercepted by something lying, or coming between. Thus, to be open with any place, is to be opposite to it; as the en-

try of a port, road, or haven.

OVER-HAULING, the act of opening and extending the several parts of a tackle, or other assemblage of ropes, communicating with blocks, or dead-eyes. It is used to remove those blocks to a sufficient distance from each other, that they may again be placed in a state of action, so as to produce the effect required.

P. PAINTER, a rope employed to fasten a boat either alongside of the ship to which she belongs, or to some wharf or key.

PALM of the anchor, the same with fluke, the broad barbed ends

of the two arms at the bottom of the shank.

PARCELING, certain long narrow slips of canvas, daubed with tar, and frequently bound about a rope, in the same manner as bandages are applied to a broken limb in surgery.

To

To PAY, to daub or anoint the surface of any body, in order to preserve it from the injuries of the water, and weather, &c.

wherein the artillery is ranged in battery upon the decks above and below.

HALF-PORTS, are what stops that part of the port which when the gun is pushed out is lest open.

PURCHASE, any mechanical power employed in raising or removing heavy bodies, or in fixing or extending the ship's rigging.

QUARTER, that part of a ship's side which lies towards the stern.

QUARTER-CLOTHS, long pieces of painted canvas, extended on
the outside of the quarter-netting from the upper-part of the gallery
to the gangway.

RANGE, a sufficient length of the cable, drawn up on the deck, before the anchor is cast loose from the bow, to let it sink to the bottom, without being interrupted, that the flukes may be forced the deeper into the ground, by the additional weight which the apchor acquires in sinking.

REEF, a certain portion of a fail, comprehended between the top or bottom, and a row of eyelet-holes parallel thereto.

To REEF, is to reduce the surface of the sail in proportion to the increase of the wind.

REEF also implies a chain of rocks, lying near the surface of the water.

RIGGING, a general name given to all the ropes employed to support the masts; and to extend or reduce the sails, or arrange them to the disposition of the wind.

RIGHTING, the act of restoring a ship to her upright position, after she has been laid on a careen. A ship is also said to right at sea when she rises, with her masts erected, after having been pressed down on one side by the effort of her sails, or a heavy squall of wind.

SCARING, when two pieces of timber are to be joined together by the ends, if the ends are cut square, another piece is laid upon and sastened to both, and this is called scarsing.

SETING, the act of observing the situation of any distant object by the compass, in order to discover the angle which it makes with the nearest meridian.

SHEET, a rope fastened to one or both the lower corners of a sil to extend and retain it in a particular station.

SHROUDS, a range of large ropes extended from the mast-heads to the right and left side of the ship, to support the masts and en-

SKIDS, or Skeeds, are long compassing pieces of timber, sormed as to answer the vertical curve of a ship's side. They are notched below so as to sit closely upon the wales; and as they are intended to preserve the planks of the side, when any weighty body is hoisted or lowered, they extend from the main wale to the top of the side; and they are retained in this position by holts or spikenails.

SPRING, a crack or breach running transversely or obliquely through

through any part of a mast or yard, so as to render it unsafe to can

ry the usual quantity of sai! thereon.

Spring is also a rope passed out of one extremity of a ship and at tached to a cable proceeding from the other, when she lies at anchor It is usually done to bring the ship's broadside, or battery of cannot to bear upon some distant object.

SPRITSAIL, a fail attached to a yard which hangs under the

bowsprit.

SQUAL, a sudden and violent blast of wind, usually occasioned the interruption and reverbation of the wind from high mountains,

STANCHION, a fort of small pillar of wood or iron used for na rious purposes in a ship; as to support the decks, the quarter-rails the netings and awnings.

STANDING, the movement by which a ship advances towards

certain object, or departs from it.

STARBOARD, the right side of a ship when the eye of the spectator is directed forward.

To STAY, the same as to tack; the contrary to wear, which see the phrase to miss stays when she fails in the operation.

STIFF, the quality by which a ship is enabled to carry a sufficient quantity of sail, without hazard of over-setting.

STREAKS, or STRAKES, the uniform ranges of planks on the bottom and fides of the ship.

To STRIKE, to run ashore, or to beat upon the ground in pa

fing over a bank or shallow.

STUDDING-SAILS, certain light sails extended, in moderate and steady breezes, beyond the skirts of the principal sails, who they appear as wings upon the yard-arms.

SURF, the swell of the sea which breaks upon the shore, or an

rock lying near the surface of the water.

SWEEPING, the act of dragging the bight, or loofe part of small rope, along the surface of the ground, in a harbour or road in order to hook and recover some anchor, wreck, or other materia sunk at the bottom. It is performed by fastening the two ends to this rope to the sides of two boats which are abreast of each other at some distance. To the middle of the rope are suspended to cannon shot, or something which weighs heavy, in order to sink to the ground: so that, as the boats advance by rowing a-head, the rope drags along the bottom, to hook any thing for which they ar searching.

SWEEPS, are long oars sometimes used on board a ship to pu

her round.

T

TACK, a rope used to confine the foremost lowest corners of the courses and stay-sails in a fixed position, when the wind crosses the ship's course obliquely.

TACK-CHAIN plates, strong links or plates of iron, the lower ends of which are holted through the ship's side to the timbers, so the purpose of holding the rope called a tack.

MAIN-TACK, the tack of the main-fail.

TAFFAREL, the upper part of a ship's stern, being a curre piece of wood, usually ornamented with sculpture.

TAUGHT, the state of being extended or stretched out. It is ally applied to a rope or fail, in opposition to flack.

TENDING, the movement by which a ship turns or swings and her anchor in a tide-way, at the beginning of the flood or ebb. THWART, the feat or bench of a boat whereon the rowers sit manage the oars.

TILER, the bar or lever employed to turn the rudder in steering. TIMBERS, the ribs of a ship.

TRANSOMS, certain beams or timbers extended across the stern f of a ship to fortify her after part, and give it the figure most suitle to the service for which she is calculated.

TRUSSEL or TRESTLE-TREES, two strong bars of timber ed horizontally on the opposite sides of the lower mast-head, to port the frame of the top, and the weight of the top-mast.

TRIM, the state or disposition by which a ship is best calculated r the several purposes of navigation.

To TREND. to run off in a certain direction.

TRIPING, the movement by which an anchor is loosened from e bottom by its cable or buoy-ropes.

VEERING, the same as wearing, which see.

To VEER away the cable, is to flacken it, that it may run out of e ship.

WAKE, the print or track impressed by the course of a ship on e furface of the water.

WALES, an affemblage of strong planks extending along a ship's e, throughout her whole length, at different heights, and ferving reinforce the decks, and form the curves by which the vessel apars light and graceful on the water.

WARP, a small rope employed occasionally to remove a ship om one place to another, in a port, road, or river. And hence To Warp, is to change the situation of a ship, by pulling her nateria om one part of a harbour, &c. to some other, by means of warps. WASH BOARD, a broad thin plank, fixed occasionally on the p of a boat's fide, so as to raise it, and be removed at pleasure. is used to prevent the sea from breaking into the vestel, particuly when the furface is rough.

To WEATHER, is to fail to windward of some ship, bank, or ad land.

To WEAR, the same as to veer, to perform the operation by nich a ship, in changing her course from one board to the other. rns her stern to windward; it is the opposite to tacking, in which e head is turned to the windward and the stern to leeward.

WINDLASS, a machine used in merchant-ships to heave up eanchors. It is a large cylindrical piece of timber, supported at e two ends by two frames of wood, placed on the opposite sides of e deck near the fore-mast, and is turned about as upon an axis, levers called handspecs, which are for this purpose thrust into oles bored through the body of the machine.

### ACCOUNT

OFA

# Voyage round the World,

IN THE YEARS

IDCCLXIV, MDCCLXV, and MDCCLXV

By the Honourable COMMODORE BYRON,

In his Majesty's ship the DOLPHIN.

### CHAP. I.

The Passage from the Downs to Rio de Janeiro.

The longitude in this voyage is reckoned from the meridian of London, west to 180 degrees, and east afterwards.

N Thursday the 21st of June 1764, I sailed from the Downs, with his Majesty's ship the Dolphin, and he Tamar frigate, which I had received orders to take nder my command: as I was coming down the river, the Jolphin got a-ground; I therefore put into Plymouth, here she was docked, but did not appear to have received by damage. At this place we changed some of our men, nd having paid the people two months wages in advance, hoisted the broad pendant, and sailed again on Tuesday he 3d of July; on Wednesday the 4th we were off the izard, and made the best of our way with a fine breeze, to had the mortification to find the Tamar a very heavy iler. In the night of Friday the 6th, the officer of the It watch saw either a ship on fire, or an extraordinaphenomenon which greatly refembled it, at some hance; it continued to blaze for about half an hour, d then disappeared. In the evening, Thursday, law the rocks near the island of Madeira, which people call the Deserters; from desertes, a name which D 2 has

my

has been given them from their barren and desolate appear. ance: the next day, Friday 13. we stood in for the road of Funchiale, where about three o'clock in the afternoon, we came to an anchor. In the morning of Saturday 14. I waited upon the Governor, who received me with great politeness, and saluted me with eleven guns, which I returned from the ship. The next day Sunday 15. he resurned my visit at the house of the Consul, upon which I saluted him with eleven guns, which he returned from the fort. I oth found here his Majesty's ship the Crown, and the Ferret

floop, who also saluted the broad pendant.

Having completed our water, and procured all the refreshment I was able for the companies of both the ships every man having twenty pounds weight of onions for his fea stock, we weighed anchor on Thursday 19. and proceeded on our voyage. On Saturday 21. we made the island of Palma, one of the Canaries, and soon after examining our water, we found it would be necessary to touch at one of the Cape de Verd islands for a fresh supply. During the whole of our course from the Lizard, we ob ferved that no fish followed the ship, which I judged to be owing to her being sheathed with copper. By Thursday 26. our water was become foul, and stunk intolerably, but we purified it with a machine, which had been put on board for that purpose: it was a kind of ventilator, by which air was forced through the water in a continual Aream, as long as it was necessary.

In the morning of Friday 27. we made the island of Sal, one of the Cape de Verds, and seeing several turtle upon the water, we hoisted out our jolly boat, and attempt greated to strike them, but they all went down before our and ted to strike them, but they all went down before ow people could come within reach of them. On the morning of Saturday 28. we were very near the island of Bona Vill ta, the next day Sunday, 29. off the Isle of May, and on Monday 30. we came to an anchor in Port Praya bay The rainy season was already set in, which renders this place very unsafe; a large swell that rolls in from the fouthward, makes a frightful furf upon the shore, and then is reason every hour to expect a tornado, of which as it very violent, and blows directly in, the confequences an likely to be fatal; fo that after the 15th of August m thip comes hither till the rainy season is over, which hap

ear. pens in November; for this reason I made all possible haste d of to fill my water and get away. I procured three bullocks we for the people, but they were little better than carrion, 14. and the weather was so hot, that the flesh stunk in a few reat hours after they were killed.

re. On Thursday, August 2. we got again under sail, with med a large cargo of fowls, lean goats, and monkies, which the people contrived to procure for old shirts, jackets, and I other articles of the like kind. The intolerable heat, and erret almost incessant rain, very soon affected our health, and the men began to fall down in fevers, notwithstanding all my re- attention and diligence to make them shift themselves be-

d on

the

then

s it i

s an

lt no

liap

fore they stept, when they were wet.

On Wednesday 8. the Tamar fired a gun, upon which we shortened sail till she came up: we found that she had the fuffered no damage but the carrying away of her top-sail ex- yard; however, as we were obliged to make an easy fail y to till she had got up another, and the wind seemed to be oply, coming again to the fouthward, we lost a good deal of ob way. We continued, to our great mortification, to obfday bottom for us to strike, though we saw the sea as it were ably quickened with them at a little distance. Ships in these put not latitudes generally take fish in plenty, but, except harks, we were not able to catch one.

No event worthy of notice happened till Tuesday, Sep-

tember 11. when, about three o'clock in the afternoon, nd of we saw Cape Frio, on the coast of Brazil; and about noon, curtle on Thursday 13. we anchored in eighteen fathom, in the emp great road of Rio de Janeiro. The city, which is large, ow and makes a handsome appearance, is governed by the rning Viceroy of Brazil, who is perhaps in fact, as absolute a Vil lovereign as any upon earth. When I visited him, he received me in great form; above frxty officers were drawn bay up before the palace, as well as a captain's guard, who this were men of a good appearance, and extremely well clothed: his Excellency, with a number of persons of the first distinction, belonging to the place, met me at the head of the stairs, upon which fifteen guns were fired from the nearest port: we then entered the room of state, and after conversing about a quarter of an hour in French, I took my leave, and was dismissed with the same form that had

been used at my reception. He offered to return my vila at a house which I had hired on shore, but this I declined and soon after he returned it on board.

The people in my own ship, who had as much fresh meat and greens as they could eat every day, were very healthy, but there being many fick on board the Tamar, I procured a place for them on shore, where they soon recovered. I also engaged a number of Portuguese caulkers as the seams of both the ships were very open, who, after having worked some time, rendered them perfectly tight.

While we lay here, Lord Clive, in the Kent Indiaman came to the port. This ship had sailed from England month before us, and had not touched any where, yet he came in a month after us; so that her passage was just two months longer than ours, notwithstanding the time we lot in waiting for the Tamar, which, though the Dolphin wa by no means a good sailer, sailed so much worse, that we feldom spread more than half our canvas. The Kent had

many of her people down in the scurvy.

On Tuesday October 16. we weighed anchor, being impatient to get to fea, for the heat here was into lerable; but we lay four or five days above the bar, wait ing for the land breeze to carry us out, for there is no get ting out with the sea breeze, and the entrance between the two first forts is so narrow, and so great a sea breaks in w pon them, that it was not without much danger and diffe culty we got out at last, and if we had followed the advice of the Portuguese Pilot, we had certainly lost the ship As this narrative is published for the advantage of future navigators, particularly those of our own nation, it is all necessary I should observe, that the Portuguese here, car inder rying on a great trade, make it their business to attend & very time a boat comes on shore, and practise every artista in their power to entice away the crew: if other method do not succeed, they make them drunk, and immediate ly fend them up the country, taking effectual care to prevent their return, till the ship to which they belong has left the place: by this practice I lost five of my men and the Tamar nine: mine I never recovered, but the olera Tamar had the good fortune to learn where her's were do tained, and by fending out a party in the night, surprise them, and brought them back.

AP

ON Monday the 22d of October, being now once more at sea, I called all hands upon deck, and informed hem, that I was not, as they imagined, bound immediatey to the East Indies, but upon certain discoveries, which t was thought might be of great importance to our counry, in consideration of which, the Lords Commissioners of he Admiralty had been pleased to promise them double ay, and several other advantages, if during the voyage hey should behave to my satisfaction. They all expressed he greatest joy imaginable upon the occasion, and assured ne, that there was no danger or difficulty that they would eing not with the utmost cheerfulness undergo in the service of nto heir country, nor any order that I could give them which

hey would not implicitly and zealoufly obey.

We continued our course till Monday 29. having freuently hard gales with fudden gufts, which obliged us to trike our top-gallant-masts, and get up our stumps; but his day it blew a storm, with a terrible sea, and the ship aboured so much, that to ease her, I ordered the two foreship wost, and two aftermost guns to be thrown over-board: tun he gale continued with nearly equal violence all the rest of he day, and all night, so that we were obliged to lie to car inder a double-reefed main-sail; but in the morning, Thesnd e ay 30. it being more moderate, and veering from N. W. tific o S. by W. we made fail again, and stood to the westward. hod We were now in latitude 35° 50' S. and found the weather liate s cold as it is at the same season in England, although the re to nonth of November here is a spring month, answering to g has ur May, and we were near twenty degrees nearer the line: men ous, who within little more than a week had suffered inthe olerable heat, this change was severely felt: and the men, the supposing they were to continue in a hot climate during he whole voyage, had contrived to fell not only all their farm clothes, but their bedding, at the different ports where

where we had touched, now applied in great distress for

flops, and were all furnished for the climate.

On Friday, November 2. after administering the proper oaths to the Lieutenants of both ships, I delivered them their commissions; for till this time they acted only under verbal orders from me, and expected to receive their commissions in India, whither they imagined we were bound We now began to fee a great number of birds about the ship, many of them very large, of which some were brown and white, and some black: there were among them large flocks of pintadoes, which are fomewhat larger than pigeon, and spotted black and white. On Sunday 4. w faw a great quantity of rock weed, and feveral feals: ou latitude was 38° 53' S., longitude 51° W.; the variation 13° E.: the prevailing winds here were westerly, so that being continually driven to the eastward, we foresaw that it would not be easy to get in with the coast of Patagonia On Saturday 10. we observed the water to change colour but we had no ground with one hundred and forty fathom our latitude was now 41° 16' S.; our longitude 55° 17 W.; the variation was 18° 20' E. The next day, Sun day 11. we stood in for the land till eight in the evening when we had ground of red fand with forty-five fathon We steered S. W. by W. all night and the next morning Monday 12. we had fifty-two fathom with the same ground our latitude was 42° 34' S., longitude 58° 17' W.; the variation 1103 E.

On Monday 12. about four o'clock in the afternoon as I was walking on the quarter-deck, all the people upor I im the forecastle called out once " Land right a-head;" it a ap was then very black almost round the horizon, and w had much thunder and lightning; I looked forward under the forefail, and upon the lee-bow, and faw what at fir appeared to be an island, rising in two rude craggy hills but upon looking to leeward I saw land joining to it, and running a long way to the southeast: we were the steering S. W. and I fent officers to the mast head to look out upon the weather-beam, and they called out the they faw land also a great way to the windward. I im mediately brought to, and founded; we had still fifty two fathom, but I thought that we were embayed and a ther wished than hoped that we should get clear before night

ight. We made fail and steered E. S. E. the land still wing the same appearance, and the hills looking blue, they generally do at a little distance in dark rainy weaer, and now many of the people said that they saw the a break upon the fandy beaches; but having steered out rabout an hour, what we had taken for land, vanished lat once, and to our great astonilhment appeared to have een a fog-bank. Though I had been almost continually fea for seven and-twenty years, I had never seen such a rge eception before; others however have been equally deceied; for the master of a ship, not long since, made oath, hat he had seen an island between the west end of Ireland nd Newfoundland, and even distinguished the trees that rew upon it. Yet it is certain that no such island exists, hat least it could never be found, though several ships were the fterwards sent out on purpose to seek it. And I am sure, hat if the weather had not cleared up soon enough for us fee what we had taken for land disappear, every man on om poard would freely have made oath, that land had been dif-17 overed in this fituation. Our latitude this day was 43° 6' S. longitude 60° 5' W.; and the variation 19° 30' E. The next day, Tuesday 13. at four o'clock in the afon ernoon, the weather being extremely fine, the wind shiftd at once to the S. W. and began to blow fresh, the sky and the same time becoming black to windward: in a few the minutes all the people that were upon the deck were alarmd with a sudden and unusual noise, like the breaking of con the sea upon the shore. I ordered the topsails to be handipoi d'immediately; but before it could be done, I saw the " a approaching at some distance, in vast billows covered we ith foam; I called to the people to hawl up the forefail. nd let go the main sheet instantly; for I was persuaded hat if we had any fail out when the gust reached us, we ould either be overset, or lose all our masts. It reached s however before we could raise the main tack, and laid s upon our beam ends: the main tack was then cut, for was become impossible to cast it off; and the main sheet ruck down the First Lieutenant, bruised him dreadfully, nd beat out three of his teeth: the main topfail, which as not quite handed, was split to pieces. If this squall, d ra hich came on with less warning and more violence than by I had ever seen, had taken us in the night, I think

the ship must have been lost. When it came on we observed several hundreds of birds slying before it, which expensed their terror by loud shrieks; it lasted about twenty in nutes, and then gradually subsided. The Tamar split he main sail, but as she was to leeward of us, she had more time to prepare. In a short time it began to blow ver hard again, so that we reested our main sail, and lay to us der it all night. As morning approached, Wednesday to the gale became more moderate, but we had still a greater, and the wind shifting to S. by W. we stood to the westward under our courses. Soon after it was light, the sea appeared as red as blood, being covered with a small shell-sish of that colour, somewhat resembling our craysh but less, of which we took up great quantities in basket

Thursday November 15. At half an hour past four in the morning, we saw land, which had the appearance of island about eight or nine leagues long; there being no lan in fight either to the northward or fouthward, though by the charts it should be Cape Saint Helena, which projects from the coast to a considerable distance, and forms two bay one to the north, and the other to the fouth. As the weather was very fine, I tacked and stood in for it about ten o'clock; but as there were many funken rocks at bout two leagues distance from it, upon which the se broke very high, and the wind feemed to be gradually dy ing away, I tacked again and stood off. The land as peared to be barren and rocky, without either tree or but when I was nearest to it I sounded and had forty-five to thom, with black muddy ground. To my great mistor tune, my three Lieutenants and the Master were at the time to ill as to be incapable of duty, though the rest the ship's company were in good health. Our latitude wa 45° 21' S., longitude 63° 2' W.; the variation 19° 41'

The next day, Friday 16. I shaped my course by the chart in the account of Lord Anson's voyage, for Cape Blanco. In the evening it blew extremely hard at S. W. by S so that we brought to for the night under our main fall Saturday 17. In the morning we made fail again, but we had a great sea; and although it was now almost midsum mer in these parts, the weather was, in every respect, much worse than it is in the Bay of Biscay at the depth of win ter. About six in the evening, having carried all the six

by S fall of w Hum much ould, we made land, bearing about S. S. W. which as had a good observation of the sun, we knew to be Cape nco; but it now began to blow with more violence n ever, and the storm continued all night, with a sea t was continually breaking over us, fo that the ship oured very much. Sunday 18. At four in the morning, founded and had forty fathom, with rocky ground; ing stood off in the night, we now wore and stood in in, the storm still continuing with hail and snow: and ut fix o'clock we faw the land again, bearing S. W. W. The ship was now so light, that in a gale of wind drove bodily to leeward; so that I was very solicitous get into Port Defire, that I might put her hold in orand take in sufficient ballast, to avoid the danger of ng caught upon a lee-shore in her present trim. We red in for the land with the wind at N. E. and in the ning brought to; but the wind coming to the westd, we were driven off in the night. At seven the next rning, Monday 19. we stood in again, steering S. W. S. by the compass, and soon perceived the sea to break ht ahead of us; we immediately sounded, and shoaled our er from thirteen to seven fathom, soon after deepening it in from seventeen to forty-two; so that we went over end of a shoal, which a little farther northward might e been fatal to us. Cape Blanco at this time bore W. W. 1 S. distant four leagues: but we were still at a loss Port Defire, it being impossible that any description uld be more confused than that which Sir John Narbogh has given of this harbour. I flood into a bay to fouthward of the Cape, as he directs, but could find such place; I therefore stood along the shore to the thward, the wind blowing off the land very hard, and several large columns of smoke rising in many places, no tree or bush, the country resembling in appearance barren downs of England. We observed also that the er was frequently very shallow at the distance of seven eight miles from the shore, for we had many times not re than ten fathom.

We continued to stand along the shore all day as near as lible, and in the evening we saw an island at the distance about six leagues; in the morning, Tuesday 20. we in for it, and found that it corresponded with Nar-

borough's description of Penguin island. As Port Del is faid to be about three leagues northwest of this island, fent the boat to look for it, and when she returned, havin found it, I stood in for the land. There were thousands feals and penguins about the ship, and near Penguin illa feveral smaller islands, or rather rocks. In the evening we faw a remarkable rock, rifing from the water like steeple, on the fouth side of the entrance of Port Defin this rock is an excellent mark to know the harbour, while it would otherwise be difficult to find. At night, the being little wind, we anchored at the distance of four five miles from the shore; and in the morning, Wedne day 21. with a breeze from the land, we turned up i harbour's mouth; we found it very narrow, with man rocks and shoals about it, and the most rapid tide I h ever known. I came to an anchor off the harbour in ni fathom, the entrance of the river being open, and bearing W. S. W. Penguin island S. E. + E. distant about the leagues; the Steeple rock S. W. by W. the northermo land N. N. W.; and two rocks, which are covered at h tide, and lie at the fouthermost extremity of a reef which runs from the same land, N. E. by N. I mention these bearings particularly because I think it may be importance to future navigators, especially as the descrip tions that have been given of this place, by the few wh have already visited it, are extremely defective. The win blew very hard the greater part of this day, and there rank ugly sea where we were stationed, yet I ordered our tw boats to found the harbour, and attended in my own bot myself. We found it very narrow for near two miles, with tide running at the rate of eight miles an hour: we form also many rocks and shoals, but all the danger shows its above water. When we came to the shore, I landed, at walked a little way into the country, which as far as could fee was all downs, without a fingle tree or fhou We saw the dung of many beasts, and had a glimple four, which ran away as foon as we came in fight, foth we could not certainly determine what they were; but believed them to be Guanicoes, many of which we all wards faw come down to the water fide: they relemb our deer, but are much larger, the height of Tome bell not less than thirteen hands; they are very shy, and to

ft. After I returned to my boat, I went faither up harbour, and landed upon an island that was covered h feals, of which we killed above fifty, and among m many that were larger than a bullock, having before floaded our boat with different kinds of birds, of which, l feals, there are enough to supply the navy of England. nong the birds one was very remarkable; the head rebled that of an eagle, except that it had a large comb on it; round the neck there was a white ruff, exactly embling a lady's tippet; the feathers on the back were black as jet, and as bright as the finest polish could renthat mineral: the legs were remarkably strong and ge, the talons were like those of an eagle, except that were not so sharp, and the wings, when they were ended, measured, from point to point, no less than elve feet.

The Tamar worked into the harbour with the tide of d, but I kept my station with the Dolphin till I should e a leading wind, and the wind shifting to the eastward, reighed about five o'clock in the afternoon, intending go up with the evening flood: before I could get unfail, however, the wind shifted again to N. W. by N.; it being low water, the ship lying but just within the bour, and there being no tide to affift us, we were iged to anchor near the fouth shore. The wind came the land in very hard flaws, and in a short time, our hor coming home, the ship tailed on shore against a p gravelly beach. The anchoring ground indeed as far we had yet founded was bad, being very hard; so that, his situation, if the wind blows fresh, there is always greatest reason to fear that the anchor should come he before the ship can be brought up. While we were hore, it began to blow very hard, and the tide running a fluice, it was with the utmost difficulty that we d carry an anchor to heave us off; however, after at four hours hard labour, this was effected, and the floated in the stream. As there was only about fix seven feet of the after part of her that touched the und, there was reason to hope that she had suffered no age; however, I determined to unhang the rudder, it might be examined.

OL. L. During

During all this night and the next morning, Thursday 22. the wind blew with great violence; and we had let go our best bower anchor when we were near the short in hopes it would have brought us up, and had not yo been able to weigh it. We now rode in a very disagree able situation with our small bower, and that unfortunate ly came home again: we therefore got a hawser out of the Tamar, who lay in the stream, and after weighing the small bower, we got out by her assistance, and then drop ped it again, most ardently wishing for fair weather, the

we might get the ship properly moored.

The next day, Friday 23. we founded the harbour high er up, and found the ground fofter, and the water not deep; yet the wind continued to blow so hard that could not venture to change our station. We had four a small spring of water about half a mile inland, upon the north fide of the bay, but it had a brakish taste; I had; fo made another excursion of several miles into the country which I found barren and desolate, in every direction, far as the eye could reach. We had feen many guanico at a distance, but we could not get near enough to have shot at them; we tracked beasts of several kinds in the soil near a pond of falt water, and among them a very larg tyger: we found also a nest of ostriches eggs, which w eat, and thought very good. It is probable that all the animals which had left marks of their feet near the fa pond, drank the water, and indeed we saw no fresh water for them. The spring that we had found, which was no perfectly fresh, was the only one of the kind that we ha been able to discover; and for that we had been oblige to dig, there being no appearance of it except a flight moisture of the ground.

On Saturday 24. upon flack water, we carried both the fhips higher up and moored them: the extreme points the harbour's mouth at low water bore from E. by S. 18 to E.; and the Steeple rock S. E. 1/4 E. We had her at low water, but fix fathom; but at spring tides the water rises no less than four fathom and an half, which is to ven and twenty feet. The tide in this place is such a perhaps it is not in any other. It happened by some a cident that one of our men fell overboard; the boats we all along side, and the man was an exceeding good swin

On Sunday 25. I went a good way up the harbour in he boat, and having landed on the north fide, we foon fter found an old oar of a very fingular make, and the arrel of a musket, with the King's broad arrow upon it. nty The musket barrel had suffered so much from the weather, hat it might be crumbled to dust between the fingers: I magined it had been left there by the Wager's people, or erhaps by Sir John Narborough. Hitherto we had found o kind of vegetables except a species of wild peas; but larg hough we had seen no inhabitants, we saw places where hey had made their fires, which however did not appear to be recent. While we were on shore we shot some wild lucks, and a hare; the hare ran two miles after he was water wounded, though it appeared when he was taken up that s no ball had paffed quite through his body. I went this day ha many miles up the country, and had a long chace after ligo one of the guanicoes, which was the largest we had seen: flight he frequently stopped to look at us, when he had left us t a good distance behind, and made a noise that resembled h the neighing of a horse; but when we came pretty near hat he could not run him any longer, he got quite away here from us, and we faw him no more. We shot a hare howis he hat none of us could go near him. The flesh of the hares cha here is as white as snow, and nothing can be better tasted. A serjeant of marines, and some others who were on shore wo at another part of the bay, had better success than fell to our fwin hare, for they killed two old guanicoes and a fawn; they

were however obliged to leave them where they fell, not being able to bring them down to the water fide, near fix miles, without farther affistance, though they were but half the weight of those that are mentioned by Sir John Nar. borough; some however I saw, which could not weigh less than feven or eight and thirty stone, which is about three hundred pounds. When we returned in the evening it blew very hard, and the deck being so full of lumber that we could not hoist the boats in, we moored them aftern. A. bout midnight, the storm continuing, our fix oared cutter filled with water and broke adrift; the boat-keeper, by whose neglect this accident happened, being on board her, very narrowly escaped drowning by catching hold of the stern ladder. As it was tide of flood when she went from the ship, we knew that she must drive up the harbour; yet as the loss of her would be an irremediable misfortune, I fuffered much anxiety till I could send after her in the morning, and it was then some hours before she was brought back, having driven many miles with the stream. In the mean time I fent another party to fetch the guanicoes which our people had shot the night before; but they found nothing left except the bones, the tygers having eaten the flesh, and even cracked the bones of the limbs to come at the marrow. Several of our people had been fif teen miles up the country in fearch of fresh water, but could not find the least rill: we had funk several wells to a confiderable depth where the ground appeared moift, but upon visiting them, I had the mortification to find that, altogether, they would not yield more than thirty gallons in twenty-four hours: this was a discouraging circumstance, especially as our people, among other expedients, had watched the guanicoes, and feen them drink at the falt ponds. I therefore determined to leave the place as foon as the ship could be got into a little order, and the fix oared cutter repaired, which had been hauled up upon the beach for that purpole.

On Tuesday the 27th, some of our people, who had been ashore on the north side of the bay to try for more guanicoes, sound the skull and bones of a man, which they brought off with them, and one young guanicoe alive, which we all agreed was one of the most beautiful creature we had ever seen: it soon grew very tame, and would such

our fingers like a calf; but, notwithstanding all our care and contrivances to feed it, it died in a few days. In the fernoon of this day it blew so hard that I was obliged to keep a confiderable number of hands continually by the heet anchor, as there was too much reason to fear that our cables would part, which however did not happen. In the mean time, some of our people that were on shore with the carpenters, who were repairing the cutter on the fouth fide of the bay, found two more springs of tolerable water about two miles from the beach, in a direct line from the ship's station. To these springs I sent twenty hands early on Wednesday 28. with some small casks called Barecas, and in a few turns they brought on board a ton of water, of which we began to be in great want. In the mean time, I went myself about twelve miles up the river in my boat, and the weather then growing bad, I went on shore: the river, as far as I could see, was very broad; there were in it a number of islands, some of which were very large, and I make no doubt but that it penetrates the country for some hundreds of miles. It was upon one of the islands that I went on shore, and I found there such a number of birds, that when they rose they literally darkened the sky, and we could not walk a step without treading upon their eggs. As they kept hovering over our heads at a little distance, the men knocked down many of them with stones and sticks, and carried off several hundreds of their eggs. After some time I left the island and landed upon the main, where our men dreffed and eat their eggs, though there were young birds in most of them. I faw no traces of inhabitants on either fide of the river, but great numbers of guanicoes, in herds of fixty or feventy together: they would not however suffer us to approach them, but stood and gazed at us from the hills. In this excursion the surgeon, who was of my party, shot a tyger cat, a small but very fierce animal; for though it was much wounded, it maintained a very sharp contest with my dog for a confiderable time before it was killed.

On Thursday 29. we completed our ballast, which the strength of the tide, and the constant gales of wind rendered a very difficult and laborious talk; we also got on board another ton of water. On the morning of Friday 30. the weather was so bad that we could not send a boat on

fhore ;

shore; but employed all hands on board in setting up the rigging. It grew more moderate however about noon, and I then fent a boat to procure more water. The two men who first came up to the well, found there a large ty. ger lying upon the ground; having gazed at each other some time, the men, who had no fire arms, seeing the beat treat them with as much contemptuous neglect as the lion did the Knight of la Mancha, began to throw stones at him: of this infult however he did not deign to take the least notice, but continued stretched on the ground in great tranquillity till the rest of the party came up, and then he

very leifurely rose and walked away.

On Saturday December 1. our cutter being thorough ly repaired we took her on board, but the weather was fo bad that we could not get off any water: the next day we ftruck the tents which had been fet up at the watering. place, and got all ready for sea. The two wells from which we got our water bear about S. S. E. of the Steeple rock, from which they are distant about two miles and an half; but I fixed a mark near them, that they might be still more easily found than by their bearings. During our stay in this harbour, we founded every part of it with great care, as high as a ship could go, and found that there is no danger but what may be feen at low water; fo that now fresh water is found, though at some distance from the beach, it would be a very convenient place for ships to touch at, if it were not for the rapidity of the tide. The country about the bay abounds with guanicoes, and great variety of wild fowl, particularly ducks, geefe, wid but geon, and fea-pies, belides many others for which we have get no name. Here is also such plenty of excellent musicle that a boat may be loaded with them every time it is low water. Wood indeed is scarce; however in some parts of this coast there are bushes, which in a case of necessity might produce a tolerable supply of fuel.

On Wednesday December 5. I unmoored, in order get out, but the best bower came up foul, and before w could heave short upon the small bower, the tide of co made strong; for at this place slack water scarcely conti nues ten minutes; so that we were obliged to wait till should be low water. Between five and fix in the evening

e weighed, and steered out E. N. E. with a fresh gale at

### CHAP. III.

ourse from Port Desire, in Search of Pepys' Island, and afterwards to the coast of Patagonia, with a Description of the Inhabitants.

A S foon as we were out of the bay, we steered for Pepys' Island, which is faid to lie in latitude 47° S. Dur latitude was now 47° 22' S., longitude 65° 49' W.; Port Desire bore S. 660 W. distant twenty-three leagues; nd Pepys' Island, according to Halley's Chart, E. 1 N. istant thirty-four leagues. The variation here was 190 E. Thursday 6. We continued our course with a pleasant ale and fine weather, so that we began to think that this art of the world was not wholly without a fummer. Friay 7. I found myself much farther to the northward than expected, and therefore supposed the ship's way had been nfluenced by a current. I had now made eighty degrees real safting, which is the distance from the main at which Pee it by's Island is placed in Halley's chart, but unhappily we now have no certain account of the place. The only person who the pretends to have feen it is Cowley, the account of whose to voyage is now before me; and all he fays of its fituation is, The that it lies in latitude 47° S.; for he says nothing of its de ongitude: he fays, indeed, that it has a fine harbour; wid but he adds, that the wind blew so hard he could not naw get into it, and that he therefore stood away to the fouthward. At this time I also was sleering southward; low for the weather being extremely fine, I could fee very far to so the northward of the fituation in which it is laid down. flit As I supposed it must lie to the eastward of us, if indeed it had any existence, I made the Tamar signal to spread early r to in the afternoon; and as the weather continued to be very clear, we could fee, between us, at least twenty leagues. We steered S. E. by the compass, and at night brought to, being by my account in latitude 47° 18' S. The next morning, Saturday 8. it blew very hard at N. W. by in N. and I still thought the island might lie to the eastward; I therefore intended to stand about thirty leagues that way, I therefore intended to stand about thirty leagues that way,

and if I found no island, to return into the latitude of 479 again. But a hard gale coming on, with a great sea, I brought to about fix o'clock in the evening under the main fail; and at fix o'clock next morning, Sunday 9. the wind being at W. S. W. we made fail again under our courses to the northward. I now judged myself to be about sixteen leagues to the eastward of the track I had run before: Por Defire bore S. 80° 53' W. diftant ninety-four leagues; and in this lituation I law a great quantity of rock-weed, and and many birds. We continued to stand to the northward next day, Monday 10. under our courses, with a hard gale from S. W. to N. W. and a great sea. At night, being in latitude 46° 50' S., I wore ship, and stood in to the westward again, our ships having spread every day as far as they could be feen by each other: and on Tuefday 11, at noon, being now certain that there could be no fuch island as is mentioned by Cowley, and laid down by Hall ley under the name of Pepys' Island, I resolved to stand in for the main, and take in wood and water, of which both ships were in great want, at the first convenient place! could find, especially as the season was advancing very fall, and we had no time to lose. From this time we continu ed to haul in for the land as the winds would permit, and kept a look out for the islands of Sebald de Wert, which by all the charts we had on board, could not be far from our track: a great number of birds were every day about the ship, and large whales were continually swimming by her. The weather in general was fine, but very cold, and we all agreed, notwithstanding the hope we had once for med, that the only difference between the middle of Sum mer here, and the middle of Winter in England, lies in the length of the days. On Saturday 15. being in latitude 50 33' S. longitude 66° 59' W. we were overtaken about in in the evening by the hardest gale at S. W. that I was e ver in, with a fea still higher than any I had seen in going round Cape Horn with Lord Anson: I expected ever moment that it would fill us, our ship being much too deep waisted for such a voyage: it would have been safest to pu before it under our bare poles, but our flock of fresh water was not fufficient, and I was afraid of being driven fo fal off the land as not to be able to recover it before the whole was exhausted; we therefore lay to under a balanced my

very leep pater fa hole in zen

en, and shipped many heavy seas, though we found our reen bulk-heads of infinite service.

The storm continued with unabated violence the whole ght, but about eight in the morning, Sunday 16. bean to subside. At ten, we made sail under our courses, d continued to steer for the land, till Tuesday 18. when four in the morning, we saw it from the mast head. ur latitude was now 51° 8' S. our longitude 71° 4' W. d Cape Virgin Mary, the north entrance of the Streights Magellan, bore S. 19° 50' W. distant nineteen leagues. s we had little or no wind we could not get in with the nd this day; the next morning, Wednesday 19. hower, it being northerly, I stood in to a deep bay, at the ottom of which there appeared to be a harbour, but I und it barred, the sea breaking quite from one side of it the other; and at low water I could perceive that it as rocky, and almost all dry: the water was shoal at a bod distance from it, and I was in fix fathom before I ood out again. In this place there seemed to be plenty fish, and we saw many porpoises swimming after them, at were as white as fnow, with black spots; a very unmmon and beautiful fight. The land here has the same pearance as about Port Desire, all downs, without a sine tree.

At break of day, Thursday 20, we were off Cape Fair-Veather, which bore about west at the distance of four agues, and we had here but thirteen fathom water, for at it appears necessary to give that Cape a good birth. rom this place I ran close on shore to Cape Virgin Mary, at I found the coast to lie S. S. E. very different from Ir John Narborough's description, and a long spit of sand inning to the fouthward of the Cape for above a league: the evening I worked up close to this spit of fand, hang feen many guanicoes feeding in the vallies as we went. ong, and a great smoke all the afternoon, about four or e leagues up the Streight, upon the north shore. At is place I came to anchor in fifteen fathom water, but e Tamar was so far to leeward, that she could not fetch e anchoring ground, and therefore kept under way all ght.

The next morning, Friday 21. at day-break I got again der sail, and seeing the same smoke that I had observed

the day before, I stood in for it, and anchored about two miles from the shore. This is the place where the crew of the Wager, as they were passing the Streight in their boat, after the loss of the vessel, saw a number of horsemen, who waved what appeared to be white handkerchiefs, inviting them to come on shore, which they were very desirous to have done, but it blew so hard that they were obliged to stand out to fea. Bulkeley, the gunner of the Wager, who has publish ed some account of her voyage, says, that they were in doubt whether these people were Europeans who had been shipwrecked upon the coast, or native inhabitants of the country about the river Gallagoes. Just as we came to a anchor, I saw with my glass exactly what was seen by the people in the Wager, a number of horsemen riding back ward and forward, directly abreast of the ship, and waving somewhat white, as an invitation for us to come on shore As I was very desireous to know what these people were, I ordered out my twelve oar'd boat, and went towards the beach, with Mr Marshall, my Second Lieutenant, and party of men, very well armed; Mr Cumming, my Fin Lieutenant, following in the fix oar'd cutter. When w came within a little distance of the shore, we saw, as new as I can guess, about five hundred people, some on foot but the greater part on horseback: they drew up upon stony spit, which ran a good way into the sea, and upon which it was very bad landing, for the water was shallow and the stones very large. The people on shore kept we ving and hallowing, which, as we understood, were invite tions to land; I could not perceive that they had any wer pons among them, however I made figns that they should retire to a little distance, with which they immediately complied: they continued to shout with great vociferation and in a short time we landed, though not without great difficulty, most of the boat's crew being up to the middle in water. I drew up my people upon the beach, with my officers at their head, and gave orders that none of the should move from that station, till I should either call beckon to them. I then went forward alone, towards the Indians, but perceiving that they retired as I advanced, made figns that one of them should come near: as it hap pened, my fignals were understood, and one of them, wh afterwards appeared to be a Chief, came towards me:

as of a gigantic stature, and seemed to realize the tales of onsters in a human shape: he had the skin of some wild east thrown over his shoulders, as a Scotch Highlander ears his plaid, and was painted so as to make the most ideous appearance I ever beheld: round one eye was a rge circle of white, a circle of black furrounded the other, nd the rest of his face was streaked with paint of different olours: I did not measure him, but if I may judge of his eight by the proportion of his stature to my own, it could ot be much less than seven feet. When this frightful colossis came up, we muttered somewhat to each other as salutation, and I then walked with him towards his comanions, to whom, as I advanced, I made figns that they hould fit down, and they all readily complied: there were mong them many women, who feemed to be proportionbly large; and few of the men were less than the Chief tho had come forward to meet me. I had heard their oices very loud at a distance, and when I came near, I erceived a good number of very old men, who were chantog some unintelligible words in the most doleful cadence I ver heard, with an air of serious solemnity, which inclined ne to think that it was a religious ceremony: they were Il painted and clothed nearly in the same manner; the cirles round the two eyes were in no instance of one colour, ut they were not univerfally black and white, some being white and red, and some red and black: their teeth were s white as ivory, remarkably even and well fet; but exept the skins which they wore with the hair inwards, most f them were naked, a few only having upon their legs a ind of boot, with a short pointed stick fastened to each eel, which served as a spur. Having looked round upon hese enormous goblins with no small astonishment, and ith some difficulty made those that were still galloping up t down with the rest, I took out a quantity of yellow nd white beads, which I distributed among them, and hich they received with very strong expressions of pleasure: then took out a whole piece of green filk riband, and iving the end of it into the hands of one of them, I made ds the he person that sat next take hold of it, and so on as far as would reach: all this while they fat very quietly, no. id any of those that held the riband attempt to pull it om the rest, though I perceived that they were still more e: b delighted

delighted with it, than with the beads. While the riba was thus extended, I took out a pair of scissars, and cut between each two of the Indians that held it, so that left about a yard in the possession of every one, which afterwards tied about their heads, where they suffered it remain without fo much as touching it while I was wit them. Their peaceable and orderly behaviour on this or casion certainly did them honour, especially as my present could not extend to the whole company : neither impai ence to share the new finery, nor curiofity to gain a near wiew of me and what I was doing, brought any one of the from the station that I had allotted him. It would be ver natural for those who have read Gay's Fables, if they for an idea of an Indian almost naked, returning to his fellow in the woods adorned with European trinkets, to think the monkey that had feen the world; yet before we despit their fondness for glass, beads, ribands and other things which among us are held in no estimation, we should con sider that, in themselves, the ornaments of savage and cit life are equal, and that those who live nearly in a state of nature, have nothing that resembles glass, so much as glass resembles a diamond; the value which we set upon a dia mond, therefore, is more capricious than the value which they fet upon glass. The love of ornament feems to be an universal principle in human nature, and the splendil transparency of glass, and the regular figure of a bead, and among the qualities that by the constitution of our natur excite pleasing ideas; and although in one of these quality ties the diamond excels glass, its value is much more than in proportion to the difference: the pleasure which it give among us is, principally, by conferring distinction, and gratifying vanity, which is independent of natural talk that is gratified by certain hues and figures, to which for that reason we give the name of beauty: it must be re membered also, that an Indian is more distinguished by glass button or bead, than any individual among us by diamond, though perhaps the same sacrifice is not made to his vanity, as the possession of his finery is rather a tellimony of his good fortune, than of his influence or power in consequence of his having what, as the common medium of all earthly possessions, is supposed to confer virtual superiority, and intrinsic advantage, The people, however, whom enti

hom I had now adorned, were not wholly strangers to uropean commodities, for upon a closer attention, I erceived among them one woman who had bracelets eier of brass, or very pale gold, upon her arms, and some ads of blue glass, strung upon two long queues of hair, hich being parted at the top, hung down over each shoulso er before her: she was of a most enormous size, and her ce was, if possible, more frightfully painted than the rest. had a great defire to learn where she got her beads and racelets, and inquired by all the figns I could devise, but und it impossible to make myself understood. One of e men shewed me the bowl of a tobacco pipe, which was ade of a red earth, but I foon found that they had no llow bacco among them; and this person made me understand hat he wanted some: upon this I beckoned to my people, he remained upon the beach, drawn up as I had left em, and three or four of them ran forward, imagining at I wanted them. The Indians, who, as I had obserd, kept their eyes almost continually upon them, no oner saw some of them advance, than they all rose up ith a great clamour, and were leaving the place, as I pposed to get their arms, which were probably left at a ttle distance: to prevent mischief, therefore, and put an to be and to the alarm, which had thus accidentally been spread endil mong them, I ran to meet the people who were, in con-, are squence of my fignal, coming from the beach, and as foon I was within hearing I hallooed to them, and told them quality at I would have only one come up with all the tobacco that that he could collect from the rest. As soon as the Indigive as faw this, they recovered from their surprise, and every ne returned to his station, except a very old man, who ame up to me, and fung a long fong, which I much reretted my not being able to understand: before the song a for as well finished, Mr Cumming came up with the tobacco nd I could not but smile at the assonishment which I saw spressed in his countenance, upon perceiving himself, tho' by s x feet two inches high, become at once a pigmy among de to iants; for these people may indeed more properly be cald giants than tall men: of the few among us who are full ower x feet high, scarcely any are broad and muscular in proortion to their stature, but look rather like men of the ommon bulk, run up accidentally to an unufual height; ever Vol. I. hom and

and a man who should measure only six feet two inches and equally exceed a front well fet man of the common fla ture in breadth and muscle, would strike us rather as being of a gigantic race, than as an individual accidentally and malous; our sensations therefore, upon seeing five hundre people, the shortest of whom were at least four inches to der, and bulky in proportion may be easily imagined. Al ter I had presented the tobacco, four or five of the chie men came up to me, and, as I understood by the sign they made, wanted me to mount one of the horses, and go with them to their habitations, but as it would upon every account have been imprudent to comply, I mad figns in return that I must go back to the ship; at the they expressed great concern, and sat down in their state fix s ons again. During our pantomimical conference, an de thirt man often laid his head down upon the stones, and shutting his eyes for about half a minute, afterwards pointed first his mouth, and then to the hills, meaning, as I imagine that if I would stay with them till the morning, the would furnish me with some provisions, but this offer I w obliged to decline. When I left them, not one of the tide offered to follow us, but as long as I could fee them, con tinued to fit quietly in their places. I observed that the shore had with them a great number of dogs, with which I sup we s pose they chase the wild animals which serve them for food in the The horses were not large, nor in good case, yet they a that peared to be nimble, and well broken. The bridle was renter leathern thong, with a small piece of wood that serve trans for a bit, and the saddles resembled the pads that are The use among the country people in England. The wome eight rode attride, and both men and women without stirrupi yet they galloped fearlessly over the spit upon which w landed, the stones of which were large, loose, and slipper

Saturday 22. At three in the morning, we weighed with the wind at E. and steered S. W. by W. about twelve miles. During this course we went over a bank, of which the no notice has hitherto been taken: at one time we had but fat fix fathom and a half, but in two or three casts we had d thirteen. When our water was shallowest, the Asses Ears tin bore N. W. by W. 1 W. distant three leagues, and the All north point of the first Narrow W. by S. distant between five and fix miles. We then steered S. W. by S. near fix the miles to the entrance of the first Narrow, and afterwards S. S. W. about fix miles, which brought us through: the the tide here was so strong, that the passage was very rapid. During this course we saw a single Indian upon the south the shore, who kept waving to us as long as we were in sight: swe saw also some guanicoes upon the hills, though Wood, food in the account of his voyage, says there were none upon y ap that shore. As soon as we had passed the first Narrow, we entered a little sea, for we did not come in sight of the en-The distance from the first to the second Narrow is about eight leagues, and the course S. W. by W. The land is verupi by high on the north fide of the fecond Narrow, which contih manues for about five leagues, and we steered through it S. W. per 1 W. with foundings from twenty to five-and twenty fathom: we went out of the west end of this Narrow about noon, and steered south about three leagues for Elizabeth's Island; but the wind then coming right against us, we anchored in seven fathom. The illand bore S. S. E. distant about a mile, and Bartholomew's Island bore E. S. E. In the evening, fix Indians upon the island came down to the water side, and continued waving and hallooing to us for a long time; but as my people wanted rest, I was un-F 2 willing

willing to employ them in hoisting out a boat, and the la dians feeing their labour fruitless, at length went away While we were steering from Point Possession to the fir Narrow, the flood fet to the fouthward, but as foon as w entered the Narrow, it set strongly over to the north shore: it flows here at the full and change of the moon; bout ten o'clock. Between the first and the second Nas row the flood fets to the S. W. and the ebb to the N. E. after the west end of the second Narrow is past, the course with a leading wind, is S. by E. three leagues. Between the islands of Elizabeth and Saint Bartholomew, the chan nel is about half a mile over, and the water is deep: w found the flood fet very strongly to the southward, with great rippling, but round the Islands the tides set man different ways.

In the morning of Sunday 23. we weighed with the wind at S by W. and worked between Elizabeth and Ban tholomew's island: before the tide was spent, we got one upon the north shore, and anchored in ten fathom. Sain George's Island then bore N. E. by N. distant three leagues; a point of land, which I called Porpois Point N. by W. distant about five miles; and the southermot land S. by E. distant about two miles. In the evening, w weighed and steered S. by E. about five miles along the north shore, at about one mile's distance, with regula foundings, from feven to thirteen fathom, and every when good ground. At ten o'clock at night, we anchored i thirteen fathom; Sandy Point then bearing S. by E. dil tant four miles; Porpois Point W. N. W. three leagues and Saint George's Island N. E. four leagues. All along inipe this shore the flood sets to the southward; at the full and change of the moon, it flows about eleven o'clock, and the titud water rifes about fifteen feet.

The next morning, Monday 24. I went out in my box failed in fearch of Fresh Water Bay; I landed with my Second S. by Lieutenant upon Sandy Point, and having sent the bout boat along the shore, we walked abreast of her. Upon Water the Point we found plenty of wood, and very good water miles and for four or five miles the shore was exceedingly pleasant and al Over the Point there is a fine level country, with a for no gr was covered with flowers of various kinds, that perfume full a

the

he air with their fragrance; and among them there were berries, almost innumerable, where the blossoms had been hed: we observed that the grass was very good, and that t was intermixed with a great number of peas in bloffoms. Among this luxuriance of herbage we faw many hundreds of birds feeding, which from their form, and the uncommon beauty of their plumage, we called painted geese. We walked more than twelve miles, and that we fought;
by of fine fresh water, but not the bay that we sought;

the ty of sine fresh water, but not the bay that we sought; by Point, where a boat could land without the utmost hazard, the water being every where shoal, and the sea breaking very high. We fell in with a great number of the any huts or wigwams of the Indians, which appeared to have been very lately deserted, for in some of them the fires the which they had kindled were scarcely extinguished; they were in little recesses of the woods, and always close to fresh water. In many places we found plenty of wild ceain ery, and a variety of plants, which probably would be of great benefit to feamen after a long voyage. In the evening, we walked back again, and found the ships at anchor not in Sandy Point Bay, at the distance of about half a mile the ole so voraciously hungry that they could have eaten three ulz times their allowance; I was therefore very glad to find on shore with their guns: fixty very large mullets were dil wit taken with the seine, as I came up; and the gunner had good sport, for the place abounded with geese, teale, on inipes, and other birds, that were excellent food.

On Tuesday 25. Christmas day, we observed by two lathe titudes, and found the latitude of Sandy Point to be 53° 10' S. At eight in the morning, we weighed, and having box sailed five leagues from Sandy Point, in the direction of S. by E. & E. we anchored again in thirty two fathom, athe bout a mile from the shore; the south point of the Fresh por Water Bay then bearing N. N. W. distant about four ater miles; and the southermost land S. E. by S. As we sailant ed along the shore, at about two miles distance, we had no ground with fixty fathom; but at the distance of one mile, we had from twenty to thirty two fathom. At the med full and change of the moon, the tide flows off Fresh Wa-

ter Bay at twelve o'clock; it runs but little, yet flows to

ry much by the shore.

On Wednesday 26. at eight in the morning, we weigh ed, with the wind at E. N. E. and steered S. S. E. for Port Famine. At noon, St Anne's Point, which is the northermost point of that port, bore S. by E. 1 E. distant three leagues. Along this shore, at the distance of two or three miles, we had very deep water; but within ; mile had ground with twenty five or thirty fathom. From St Anne's Point a reef of rocks runs out S. E. by E. a bout two miles; and at the distance of two cables' length from this reef the water will fuddenly shoal from fixty-fin to thirty-five and twenty fathom. The point itself is ven fleep, so that there is no sounding till it is approached vo ry near, and great care must be taken in standing into neral Port Famine, especially if the ship is as far southward a plum Sedger river; for the water will shoal at once from thirty lerve to twenty, fifteen, and twelve fathom; and at about two poard cables' length farther in, at more than a mile from the plent shore, there is but nine feet water, when the tide is out much By hauling close round St Anne's Point, soundings will As I foon be got; and as the water shoals very fast, it is not in the -fafe to go farther in, when there is no more than feven far or wi

The next day at noon, Thursday 27. having had little bout wind, and calms, we anchored at Port Famine, close to be ve the shore, and found our fituation very safe and conveni rivers ent: we had shelter from all winds except the S. E. which W. feldom blows, and if a ship should be driven ashore in the and w bottom of the bay, she could receive no damage, for it is he w -all fine soft ground. We found drift wood here sufficient lad to have furnished a thousand sail, so that we had no nee to take the trouble of cutting green. The water of Sed ger river is excellent, but the boats cannot get in till about which two hours flood, because at low water it is very shallow till w for about three quarters of a mile. I went up it about seived four miles in my boat, and the fallen trees then rendered he Timpossible to go farther: I found it, indeed, not only dish f we cult but dangerous to get up thus far. The stream is very er we rapid, and many stumps of trees lie hidden under it : one these made its way through the bottom of my boat, and it an, on instant she was full of water. We got on shore as well a ar as the

ant

1 2

Om

gth

ery

ride

Sed

re could; and afterwards, with great difficulty, hauled er up upon the fide of the river: here we continued to op the hole in her bottom, so as that we made a shift to et her down to the river's mouth, where she was soon roperly repaired by the carpenter. On each side of this iver there are the finest trees I ever faw, and I make no oubt but that they would supply the British navy with he best masts in the world. Some of them are of a great eight, and more than eight feet in diameter, which is a proportionably more than eight yards in circumference; fo hat four men, joining hand in hand, could not compass hem: among others, we found the pepper tree, or winfive er's back, in great plenty. Among these woods, notvithstanding the coldness of the climate, there are innunerable parrots, and other birds of the most beautiful la plumage. I shot every day geese and ducks enough to irty erve my own table and several others, and every body on two poard might have done the same: we had indeed great the plenty of fresh provisions of all kinds; for we caught as out much fish every day as served the companies of both ships. will As I was much on shore here, I tracked many wild beasts not in the fand, but never faw one; we also found many huts for wigwams, but never met with an Indian. The counry between this port and Cape Forward, which is distant itthe bout four leagues, is extremely fine; the soil appears to e to be very good, and there are no less than three pretty large reni rivers, besides several brooks.

hid While we lay here, I went one day to Cape Forward, the and when I set out I intended to have gone farther; but it is the weather became so bad, with heavy rain, that we were rien slad to stop there, and make a great fire to dry our clothes, ned which were wet through. From the place where we stoped, the Indians had been gone so lately, that the wood, bout which lay half burnt, where they had made their fire, was illor till warm; and soon after our fire was kindled, we perbout seived that another was kindled directly opposite to it, on edit he Terra del Fuego shore; probably as a signal, which, diffi we had been Indians, we should have understood. Afver er we were dried and refreshed at our fire, the rain having ned bated, I walked cross the Cape, to see how the Streight an, which I found to be about W. N. W. The hills, as ella ar as I could see, were of an immense height, very crag-

gy, and covered with fnow quite from the fummit to the base. I made also another excursion along the shore a the northward, and found the country for many miles ex ceedingly pleasant, the ground being, in many places, co vered with flowers, which were not inferior to those the are commonly found in our gardens, either in beauty fragrance; and if it were not for the severity of the col in winter, this country might, in my opinion, be made by cultivation, one of the finest in the world. I had a up a small tent at the bottom of this bay, close to a little rivulet, and just at the skirts of a wood, soon after the shi came to an anchor, where three men were employed i . washing: they slept on shore; but soon after sunset wer awakened out of their first sleep by the roaring of fum wild beaits, which the darkness of the night, and the soll tariness of their situation in this pathless desert, rendere horrid beyond imagination: the tone was hollow and deep fo that the beafts, of whatever kind, were certainly large and the poor fellows perceived that they drew nearer and . nearer, as the found every minute became more loud. From this time sleep was renounced for the night, a large for was immediately kindled; and a constant blaze kept up this prevented the beafts from invading the tent; but the continued to prowl round it at a little distance, with is cessant howlings, till the day broke, and then, to the great comfort of the affrighted failors, they disappeared.

At this place, not far from where the ship lay, there a hill that has been cleared of wood, and we supposed the to be the spot where the Spaniards formerly had a settle ment. One of the men, as he was passing over this hill perceived that, in a particular part, the ground returns the sound of his soot, as if it was hollow: he therefore repassed it several times, and finding the effect still the same he conceived a strong notion that something was burne there; when he came on board, he related what he has remarked to me, and I went myself to the spot, with a small party, surnished with spades and pickaxes, and saw the spot opened to a considerable depth, but we found nothing, and did there appear to be any hollow or vault as was expected. As we were returning through the woods, we found two

See some account of this settlement in the Voyage of Captal Wallis, Chap. iii.

happy

ery large skulls, which, by the teeth, appeared to have elonged to some beasts of prey, but of what kind we could ot guess.

Having continued here till Friday the 4th of January, 765, and completed the wood and water of both ships, r which purpose I had entered the Streight, I determined fleer back again in fearch of Falkland's Islands.

#### CHAP. V.

The Course back from Port Famine to Falkland's Islands, with some Account of the Country.

WE weighed anchor at four o'clock in the morning, and worked to windward out of the harbour : the wind connued contrary at N. N. E. till about one o'clock the next ay, Saturday 5. when it shifted to W. S. W. and blew a esh gale. We steered N. W. by N. four leagues, and then ree leagues North, between Elizabeth and Bartholomew lands: we then steered from the islands N. by E. three agues to the fecond Narrow; and steered through N. E. E. continuing the same course from the second Narrow his the first, which was a run of eight leagues. As the the find still continued to blow fresh, we steered through the ed. It Narrow against the flood, in the direction of N. N. this he flood fet us back again into the entrance of the first ettle arrow, where we were obliged to anchor, in forty fathom, shill ithin two cables' length of the shore. The tide flows irne ere, at the full and change of the moon, about two o'clock, efor and runs full fix knots an hour.

Sunday 6. At one o'clock in the morning, we weighed, urid ith a light northerly breeze; and about three, we passed e ha e first Narrow a second time. Having now seen the ship small fe through, and being quite exhausted with fatigue, as I ght, I went into my cabbin to get some rest. I lay fpd ad been upon the deck all the preceding day, and all wn, and soon fell asleep; but in less than half an hour, I two as awakened by the beating of the ship upon a bank: I inintly started up, and ran upon the deck, where I soon und that we had grounded upon a hard fand. It was

happy for us, that at this time it was stark calm; and immediately ordered out the boats to carry an anchor after where the water was deepest: the anchor took the ground but before we could work the capstern, in order to heat the ship off to it, she went off, by the mere rising of the tide. It happened fortunately to be just low water whe she went aground, and there was sisteen feet forward, as six fathom a very little way aftern. The master told me that at the last cast of the lead, before we were aground, had thirteen fathom; so that the water shoaled at once

less than fixty-three feet.

This bank, which has not been mentioned by any nar gator who has passed the Streight, is extremely dangerous especially as it lies directly in the fair way between Carvingin Mary and the first Narrow, and just in the midd between the south and north shores. It is more than to leagues long, and full as broad; in many places also it very steep. When we were upon it, Point Possession by N. E. distant three leagues; and the entrance of the Narow S. W. distant two leagues. I afterwards saw may parts of it dry, and the sea breaking very high over other parts of it, where the water was shallow. A ship the should ground upon this should in a gale of wind, would prove the should ground upon this should in a gale of wind, would prove the should ground upon this should in a gale of wind, would prove the should ground upon this should in a gale of wind, would prove the should ground upon this should in a gale of wind, would prove the should ground upon this should in a gale of wind, would prove the should ground upon this should be should ground upon the should be should ground upon this should be should ground upon this should be should ground upon this should be should be

bably be very foon beat to pieces.

About fix o'clock in the morning, we anchored in teen fathom, the shoal bearing N. N. W. 1 W. at thed tance of about half a mile. At noon, we weighed with light breeze at N. E. and worked with the ebb tidet two; but finding the water shoal, we anchored again fix fathom and an half, at about the distance of half am from the fouth fide of the shoal. The Asses Ears the bearing N. W. by W. distant four leagues, and the four point of the entrance of the first Narrow W. S. W. dilla about three leagues. At this time the opening of Narrow was shut in, and upon sending out the boats found, they discovered a channel between the shoal and fouth shore of the Streight. The Tamar in the mean time as the was endeavouring to come near us, was very no going on shore, having once got into three fathom, foon after came to an anchor in the channel between shoal and the north shore.

The next morning, Monday 7. about eight o'clock, we ghed, with little wind at W. S. W. and steered about fa mile S. E. by E. when, having deepened our water thirteen fathom, we steered between the E. and E. N. along the fouth fide of the shoal, at the distance of aat seven miles from the south shore, keeping two boats some distance, one on each bow, to sound. The depth water was very irregular, varying continually between e and fifteen fathom; and upon hauling nearer to the al, we had very foon no more than feven fathom: the ats went over a bank, upon which they had fix fathom an half; it being then low water, but within the k, they had thirteen fathom. At noon, we were to eastward of the shoal, and as we hauled over to the th shore, we soon deepened our water to twenty fathom. int Possession at this time bore N. N. W. distant beeen four and five leagues, the Asses Ears W. N. W. dint six leagues, and Cape Virgin Mary N. E. & E. di-Na ht about seven leagues. From this situation we steered E. by E. for the fouth end of the spit which runs to fouthward of the Cape, and had no foundings with the and twenty fathom. At four in the afternoon, Cape rgin Mary bore N. E. and the fouth end of the spit N. by E. distant three leagues. At eight the next morn-Tuesday 8. the Cape bore N. by W. distant two hed gues. Our latitude was 51° 50', and our soundings with re eleven and twelve fathom. We now brought to for det Tamar, who had come through the north channel, am for her coming up, the officer of the watch informed that the head of the main mast was sprung: I immedily went up to look at it myfelf, and found it split al-It in a straight line perpendicularly for a considerable gth, but I could not discover exactly how far the fissure nt, for the cheeks that were upon the mast. We imaed this to have happened in the very hard gale that had rtaken us some time before, but as it was of more imtance to contrive how to repair the damage, than difer how it happened, we immediately put on a strong , and wooled it so well, that we had reason to hope mast would be as serviceable as ever. Cape Virgin ry now bore S. (2° W. distant twenty one leagues. and

and our latitude was 51° 50' S., longitude 69° 56' W. the variation 20° E.

On Wednesday 9. having sailed S. 67° E. our latitude was 52° 8' S. our longitude 68° 31' W. and Cape Virgi Mary bore S. 83° W. distant thirty-three leagues.

On Thursday 10. there having been little wind for the last twenty-four hours, between the north and east, with thick foggy weather, our course was N. 18° W. for this ty-nine miles. Our latitude was 51° 31' S. longitude 68° 44' W.; variation 20° E. and Cape Virgin Mary bo

S. 60° W. distant thirty-three leagues.

On Friday 11. we had strong gales at S. W. with great sea: our course was N. 87° E. for ninety-nine mile Our latitude was 51° 24' S. longitude 66° 10' W. Ca Virgin Mary bore S. 73° 8' W. diftant fixty-five league and Cape Fair-Weather W. 2° S. distant seventy league the variation was now 19° E. About seven in the eve ing, I thought I saw land a-head of us, but the Tam being some leagues aftern, I wore ship, and made an a fail off: the next morning, Saturday 12. at break of da I stood in again, the wind having shifted in the nights N. W. and about four o'clock I recovered fight of the la a-head, which had the appearance of three islands: I im gined they might be the islands of Sebald de Wert, be intending to stand between them, I found that the la which had appeared to be separated, was joined by son very low ground, which formed a deep bay. As for as I had made this discovery, I tacked and stood of again, and at the same time saw land a great way to t fouthward, which I made no doubt was the same that mentioned in the Charts by the name of the New Island As I was hauling out of this bay, I saw a long, low ho of rocks, stretching out for more than a league to northward of us, and another of the same kind lying b tween that and what we had taken for the northermost This land, except the low par De Wert's islands. which is not seen till it is approached near, consists of high craggy, barren rocks, which in appearance very much femble Staten Land. When I had got so near as to dile ver the low land, I was quite embayed, and if it had blow hard at S. W. so great a sea must have rolled in here would have rendered it almost impossible to claw off

ore; all ships, therefore, that may hereafter navigate ese parts, should avoid falling in with it. The seals and rds here are innumerable; we saw also many whales outing about us, several of which were of an enormous ze. Our latitude now was 51° 27' S., longitude 63° 54' V.; the variation was 23° 30' E. In the evening we rought to, and at day-break the next morning, Sunday 3. stood in for the north part of the island by the coast of hich we had been embayed: when we had got about four iles to the eastward, it fell calm, and rained with great olence, during which there arose such a swell as I never member to have seen: it came from the westward, and n so quick and so high, that I expected every moment would break: it fet us very fast towards the thore, which as dangerous as any in the world, and I could fee the rge breaking at some distance from it, mountains high: ppily for us a fresh gale sprung up at S. E, with which, our great joy, we were able to stand off; and it beoves whoever shall afterwards come this way, to give the orth part of this island a good birth. After i had got to me distance, the weather being thick, and it raining vehard, I brought to. Our latitude was now 51° S. and ngitude 63° 22' W.

On Monday 14. the weather having cleared up, and the ind shifted to the S. S. W. we steered along the shore S. by E. four miles, and saw a low flat island full of high for offis of grass, resembling bushes, bearing S., at the distance do two or three leagues, the northermost land at the same ne bearing W. distant about six leagues: we had here hat sirty eight fathom, with rocky ground. We continuland our course along the shore six leagues farther, and then he wa low rocky island bearing S. E. by E. distant about o the miles: here we brought to, and having founded, we ng b d forty fathom water, with a bottom of white fand. his island is about three leagues distant from the land we par ere coasting, which here forms a very deep bay, and bears his by N. of the other island on which we had seen the by N. of the other island on which we had seen the chr ng tusts of grass: we saw the sea break at a good distance om the shore, and during the night stood off and on. blot he next morning, Tuesday 15. at three o'clock we made , and stood in for the land to look for a harbour. At , the east end of the rocky island bore W. S. W. distant VOL. I. about

about three miles, and our foundings then were fixten fathom, with rocky ground; but when we got within the island we had twenty fathom, with fine white sand. The coast from this rocky island lies E. by S. distant about & ven or eight leagues, where there are two low island which make the easternmost land in fight. At eight of clock we faw an opening, which had the appearance of harbour, bearing E. S. E. and being between two and three leagues distant. Upon this discovery we brought to, an fent a boat from each of the ships to examine the opening but it beginning to blow very hard soon after, and the we ther growing thick, with heavy rain, we were obliged frand out to fea with both the thips, and it was not with out great difficulty that we cleared the two rocky illand which were to the eastward of us. We had now a gree fea, and I began to be under much concern lest we should be blown off, and our people in the boats left behind however, about three in the afternoon, the weather clear ing up, I tacked and stood in again, and presently after had the satisfaction to see one of the boats, though it w a long way to leeward of us. I immediately bore down her, and found her to be the Tamar's boat, with M Hindman, the Second Lieutenant, on board, who having been on shore in the opening, had ventured off, notwith standing the great sea and bad weather, to inform me the he had found a fine harbour : we immediately stood in for and found it equally beyond his report and our expectat ons: the entrance is about a mile over, and every part it is perfectly safe, the depth of water, close to the show being from ten to seven fathom. We found this harbon to confilt of two little bays on the starboard side, who ships may anchor in great fafety, and in each of which there is a fine rivulet of freth water. Soon after we a tered an harbour of much greater extent, which I call PORT EGMONT, in honour of the earl, who was then fir Lord of the Admiralty; and I think it is one of the fine harbours in the world. The mouth of it is S. E. dilla feven leagues from the low rocky island, which is a go mark to know it by: within the island, and at the distant of about two miles from the shore, there is between seven teen and eighteen fathom water; and about three league to the westward of the harbour, there is a remarkab 71102 3

white fandy beach, off which a ship may anchor till there s an opportunity to run in. In standing in for this fandy beach, the two low rocky islands, which we found it diffcult to clear when the weather obliged us to stand off, appear to the eastward, and Port Egmont is about fixteen eagues from the north end of these islands. We moored n ten fathom, with fine holding ground. The northermost point of the western shore was distant two miles and in half, the watering place on that shore bore W. N. W. W. and was distant half a mile, and the islands on the aft fide bore E. by S. and were distant four miles. The whole navy of England might ride here in perfect security rom all winds. Soon after the ship came to an anchor, he other boat which had remained on shore when Mr Hindman put off, came on board. In the fouthermost part of the harbour there are several islands, but there is no passage out for a ship; I went, however, through in my boat, about feven leagues distant from where the ship ay, and entered a large found, which is too much exposed o a westerly wind for ships to lie in it safely; and the master of the Tamar, who had been round in her boat, nd entered this found from without, reported that many hoals lay off it, so that if the harbour was ever so good, t would not be prudent to attempt getting in. In every part of Port Egmont there is fresh water in the greatest lenty, and geefe, ducks, fnipes, and other birds are fo numerous, that our people grew tired of them: it was a common thing for a boat to bring off fixty or seventy fine reese, without expending a single charge of powder and hot, for the men knocked down as many as they pleased with stones: wood, however, is wanting here, except a ttle that is found adrift along the shore, which I imagined ame from the Streight of Magellan. Among other rereshments, which are in the highest degree salutary to those the have contracted scorbutic disorders, during a long oyage, here are wild celery, and wood forrel, in the great-It abundance; nor is there any want of mussels, clams, goo Stand Seven ockles, and limpets: the seals and penguins are innumerale, so that it is impossible to walk upon the beach withut first driving them away: and the coast abounds with agu kab ta-lions, many of which are of an enormous fize. We ound this animal very formidable; I was once attacked by whit

one of them very unexpectedly, and it was with the utmost difficulty that I could difengage myself from him: at other times we had many battles with them, and it has sometimes afforded a dozen of us an hour's work to dispatch one of them: I had with me a very fine mastiff dog, and a bite of one of these creatures almost tore him to pieces. Nor were these the only dangerous animals that we found here, for the mafter having been sent out one day to found the coast upon the south shore, reported, at his retun that four creatures of great fierceness, resembling wolves ran up to their bellies in the water to attack the people in his boat, and that as they happened to have no fire arm with them, they had immediately put the boat off into deep water. The next morning after this happened, I went upon the fouthern shore myself, where we found on of the largest sea-lions I had ever seen: as the boat's cree were now well armed, they immediately engaged him and during the contest one of the other animals was sen running towards us: he was fired at before he came ug and was presently killed, though I afterwards wished that we had endeavoured to take him alive, which, if we had been aware of his attack, I dare fay might eafily have been done. When any of these creatures got fight of our po ple, though at ever fo great a distance, they ran directly at them; and no less than five of them were killed this day. They were always called wolves by the ship's com pany, but, except in their fize, and the shape of the tall I think they bore a greater resemblance to a fox. The are as big as a middle fized mastiff, and their fangs are to markably long and sharp. There are great numbers of them upon this coast, though it is not perhaps easy to guess how they first came hither, for these islands are least one hundred leagues distant from the main: they but row in the ground like a fox, and we have frequently fet pieces of feal which they have mangled, and the skins penguins, lie scattered about the mouth of their holes. get rid of these creatures, our people set fire to the grall fo that the country was in a blaze as far as the eye con reach, for feveral days, and we could fee them running great numbers to feek other quarters. I dug holes in m ny places, about two feet deep, to examine the foil, which I found first a black mould, and then a light clay. Whi

we lay here, we fet up the armourer's forge on shore, and completed a great deal of iron work that was much wanted. Our people had every morning an excellent breakfast made of portable soup, and wild celery, thickened with oatmeal: neither was our attention confined wholly to ourselves, for the surgeon of the Tamar surrounded a piece of ground near the watering-place with a sence of turs, and planted it with many esculent vegetables as a garden, for the benefit of those who might hereafter come to this place. Of this harbour, and all the neighbouring islands, I took possession, by the name of Falkland's Islands; and there is I think little reason to doubt that they are the same land to which Cowley gave the name of Pepys's Island.

In the printed account of Cowley's voyage, he says, "we held our course S. W. till we came into the latitude of forty seven degrees, where we saw land, the same being an island, not before known, lying to the westward of us: it was not inhabited, and I gave it the name of Pepys's Island. We found it a very commodious place for ships to water at, and take in wood, and it has a very good harbour, where a thousand sail of ships may saseily ride. Here is great plenty of fowls, and, we judge, abundance of sish, by reason of the ground's being nothing

" but rocks and fands."

To this account there is annexed a representation of Pepys's Island, in which names are given to several points and head-lands, and the harbour is called Admiralty Bay; yet it appears that Cowley had only a distant view of it, for he immediately adds, "the wind being fo extraordina-"ry high that we could not get into it to water, we flood "to the fouthward, shaping our course S. S. W. till we " came into the latitude of 53°;" and though he fays that " it was commodious to take in wood," and it is known that there is no wood on Falkland's Islands, and Pepys's Island and Falkland's Islands may not with standing be the same; for upon Falkland's Islands there are immense quantities of slags with narrow leaves, reeds and rushes which grow in clusters, so as to form bushes about three feet high, and then shoot about six or seven feet higher; these at a distance have greatly the appearance of wood, and were taken for wood by the French, who land.

The

was

Mac

and

Dan

ed there in the year 1764, as appears by Pernetty's ac. count of their voyage. It has been suggested that the la. titude of Pepys's Island might, in the MS. from which the account of Cowley's voyage was printed, be expressed in figures, which, if ill made, might equally resemble for ty seven, and fifty-one; and therefore as there is an island in these seas in latitude forty-seven, and as Falkland's I. flands lie nearly in fifty-one, that fifty-one might reasonab. ly be concluded to be the number for which the figures were intended to stand: recourse therefore was had to the British Musæum, and a manuscript journal of Cowley's was there found. In this manuscript no mention is made of an island not before known, to which he gave the name of Pe pys's Island, but land is mentioned in latitude forty-seven degrees forty minutes, expressed in words at length, which exactly answers to the description of what is called Pepys's Island in the printed account, and which here, he fays, he supposed to be the islands of Sebald de Wert. This part of the manuscript is in the following words: " January 1683, This month wee were in the latitude of " forty-feaven degrees and forty minnetts, where wer is fr " espyed an island bearing west from us, wee having the wind at east-north-east, wee bore away for it, it being " too late for us to goe on shoare, wee lay by all night "The island seemed very pleasant to the eye, with many woods, I may as well fay the whole land was woods vent "There being a rock lying above water to the eastward S. it, where an innumerable company of foroles, being of the ther " bignesse of a small goose, which sowles would thrike a of I our men as they were aloft: fome of them wee killed and eat: they seemed to us very good, only tasted some what fishly. I sailed along that island to the fouthward and about the fouth west side of the island there seems to me to be a good place for shipps to ride; I would have had the boat out to have gone into the harbour, by \* the wind blew fresh and they would not agree to go will it. Sailing a little further, keeping the lead, and in wing fix and twenty, and feaven and twenty fathoms we "ter, untill wee came to a place where we law the wee " ride, having the lead againe, found but seaven fathor water. Fearing danger went about the shipp there, wo then fearefull to stay by the land any longer, it being

about

" rocky ground, but the harbour seemed to be a good place " for Shipps to ride there; in the island feeming likewise to " have water enough, there feemed to me to be harbour " for five bundred faile of Shipps. The going in but narrow, " and the north fide of the entrance shallow water that I " could see, but I verily believe that there is water enough " for any shipp to go in on the south side, for there cannot "be so great a lack of water, but must needs scowre a " channell away at the ebbe deepe enough for shipping to " goe in. I would have had them stood upon a wind all " night, but they told me they were not come out to goe "upon discovery. Wee saw likewise another island by this "that night, which made me thinke them to be the Sib-" ble D'wards.

"The same night we steered our course againe west " fouth west, which was but our south west, the compasse "having two and twenty degrees variation eastwardly, " keeping that course till we came in the latitude of three

" and fifty degrees."

In both the printed and manuscript account, this land is said to lie in latitude forty-seven, to be situated to the westward of the ship when first discovered, to appear woody, to have an harbour where a great number of thips might ride in safety, and to be frequented by innumerable birds. It appears also by both accounts, that the weather preoods vented his going on shore, and that he steered from it W. ord of S. W. till he came into latitude fifty-three: there can of the therefore be little doubt but that Cowley gave the name ke a of Pepys's Island after he came home, to what he really supposed to be the island of Sebald de Wert, for which it is not difficult to affign feveral reasons; and though the supposition of a mistake of the figures does not appear to eeme be well grounded, yet, there being no land in forty-feven, would the evidence that what Cowley faw was Falkland's Islands, is very strong. The description of the country agrees in o will almost every particular, and even the map is of the same d in general figure, with a streight running up the middle. The chart of Falkland's that accompanies this narrative, wed was laid down from the journals and drawings of Captain thor Macbride, who was dispatched thither after my return, and circumnavigated the whole coast: the two principal flands were probably called Falkland's Islands by Strong,

about the year 1689, as he is known to have given the name of Falkland's Sound to part of the streight which di vides them. The journal of this navigator is still unprint ed in the British Musæum. The first who saw these island is supposed to be Captain Davies, the associate of Caven dish, in 1692. In 1594, Sir Richard Hawkins saw land supposed to be the same, and in honour of his mistress Queen Elizabeth, called them HAWKINS'S MAIDEN LAND Long afterwards, they were feen by some French ship from Saint Maloes, and Frezier, probably for that reason, called the Malouins, a name which has been fince adopted algoratii walay W . wayayadib

by the Spaniards.

Having continued in the harbour which I had called Port Egmont till Sunday 27. we sailed again at eight o'clock in the morning with the wind at S. S. W.; but we were scarcely got out of the Port before it began to blow very hard, and the weather became so thick that we could not fee the rocky islands. I now most heartily wished myled again at anchor in the harbour we had quitted; but in short time we had the satisfaction to see the weather be come clear, though it continued to blow very hard the whole day. At nine the entrance of Port Egmont has bour bore E. S. E. distant two leagues; the two low island to the northward E. by N. diffant between three and four miles; and the rocky Island W. 1 N. distant for leagues. At ten the two low islands bore S. S. E. distant four or five miles; and we then steered along the show east by the compass, and after having run about five league we faw a remarkable head land, with a rock at a little di tance from it, bearing E. S. E. & E. distant three league This head land I called CAPE TAMAR. Having continue the same course five leagues farther we saw a rock about five miles from the main bearing N. E. at the di tance of four or five leagues: this rock I called the DISTONE, and then Reered between it and a remarkal head-land which I called CAPE DOLPHIN, in the direction of E. N. E. five leagues farther. From Cape Tamar Cape Dolphin, a diffance of about eight leagues, the la forms, what I thought, a deep found, and called it Co LISLE Sound; but which has fince appeared to be the thern entrance of the Streight between the two princip islands. In the part that I supposed to be the bottom

northward;

he found, we saw an opening, which had the appearance of a harbour. From Cape Dolphin we steered along the hore E. I. N. sixteen leagues, to a low stat Cape or headand, and then brought to. In this day's run the land, or the most part, resembled the east side of the coast of catagonia, not having so much as a single tree, or even a wish, being all downs, with here and there a sew of the high tusts of grass that we had seen at Port Egmont; and a this account I am sure I am not mittaken, for I fremently sailed within two miles of the shore; so that if here had been a shrub as big as a goose-berry bush, I hould have seen it. During the night we had forty sa-

hom water with rocky ground.

The next morning, Monday 28. at four o'clock, we hade fail, the low flat cape then bearing S. E. by E. difant five leagues: at half an hour after five it bore S. S. E. distant two leagues; and we then steered from it E. S. E. five leagues, to three low rocky islands, which lie aout two miles from the main. From these islands we teered S. S. E. four leagues, to two other low islands, which lie at the distance of about one mile from the main. Between these islands the land forms a very deep sound, which I called BERKELEY'S SOUND. In the fouth part of his found there is an opening, which has the appearance fa harbour; and about three or four miles to the fouthvard of the fouth point of it, at the distance of about four niles from the main, fome rocks appear above the water, pon which the fea breaks very high, there being here a reat swell from the southward. When we were abreast of hese breakers, we steered S. W. by S. about two leagues, then the fouthermost land in fight, which I took to be he southermost part of Falkland's Islands, bore W. S. W. listant five leagues. The coast now began to be very danerous, there being, in all directions, rocks and breakers ta great distance from the shore. The country also inand had a more rude and desolate appearance; the high round, as far as we could fee, being all barren craggy ocks, very much resembling that part of Terra del Fueto which lies near Cape Horn. As the sea now rose evey moment, I was afraid of being caught here upon a leehore, in which case there would have been very little chance of my getting off, and therefore I tacked, and stood to the

northward; the latitude of the southermost point in sight being about 52° 3' S. As we had now run no less than seventy leagues along the coast of this island, it must centainly be of very considerable extent. It has been said by some former navigators to be about two hundred miles in circumference, but I made no doubt of its being nearer seven. Having hauled the wind, I stood to the northward about noon; the entrance of Berkeley's Sound at three o'clock bore S. W. by W. distant about six leagues. At eight in the evening, the wind shifting to the S. W. we stood to the westward.

## CHAP. VI.

The Passage through the Streight of Magellan as far as Cape Monday, with a Description of several Bays and Har-bours, formed by the Coast on each Side.

WE continued to make fail for Port Defire till Wed nesday the 6th of February, when about one o'clock in the afternoon we saw land, and stood in for the Port During the run from Falkland's Islands to this place, the number of whales about the ship was so great as to render the navigation dangerous; we were very near striking upon one, and another blew the water in upon the quarter decks they were much larger than any we had seen. As we were standing in for Port Desire, we saw the Florida, a store ship that we expected from England; and at sour we can to an anchor off the harbour's mouth.

The next morning, Thurday 7. Mr Dean, the masters the store ship, came on board; and sinding from his report that his foremast was sprung, and his ship little better that a wreck, I determined to go into the harbour, and try to unload her there, although the narrowness of the place and the rapidity of the tides, render it a very dangerous situation. We got in in the evening, but it blowing we hard in the night, both the Tamar and the store-ship made signals of distress; I immediately sent my boats to their a sistance, who sound that, notwithstanding they were more ed, they had been driven up the harbour, and were in the greatest danger of being on shore. They were brough

ck, not without great difficulty, and the very next night ey drove again, and were again faved by the same efforts, om the same danger. As I now found that the store-ship as continually driving about the harbour, and every moent in danger of being loft, I gave up, with whatever restance, my defign of taking the provisions out of her, and nt all our carpenters on board, to fish the mast, and make ch other repairs as they could. I also lent her my forge complete such iron work as they wanted, and determinthe moment she was in a condition to put to sea, to ke her with us into the Streight of Magellan, and unad her there. While this was doing, Captain Mouat, ho commanded the Tamar, informed me that his rudder as sprung, and that he had reason to fear it would in a ort time become wholly unserviceable. Upon this I orred the carpenter of the Dolphin on board the Tamar, examine the rudder, and he reported it to be so bad that his opinion the vessel could not proceed on her voyage ithout a new one. A new one however it was not in our ower to procure at this place, and I therefore defired Capin Mouat to get his forge on shore, and secure his rudder ith iron clamps in the best manner he could, hoping that the Streight a piece of timber might be found which ould furnish him with a better.

On Wednesday 13. The store-ship being ready for sea, put on board of her one of my petty officers, who was ell acquainted with the Streight, and three or sour of my amen to assist in navigating her; I also lent her two of y boats, and took those belonging to her, which were wed, on board to get them repaired, and then I ordered it master, to put to sea directly, and make the best of his ay to Port Famine; though I did not doubt but that I ould come up with her long before she got thither, as I tended to sollow her as soon as the Tamar was ready, in Captain Mouat had told me that the rudder having the patched together by the joint labour and skill of the repenter and smith, he should be in a condition to proceed the me the next morning.

The next morning, Thursday 14. we accordingly put sea, and a few hours afterwards being abreast of Penguin and, we saw the store-ship a long way to the eastward.

will and the profit boats out, the file its consider

On

On Saturday 16. About fix o'clock in the morning, faw Cape Fair-weather bearing W. S. W. at the diffame of five or fix leagues; and at nine, we faw a strange fails the N. W. standing after us.

On Sunday 17. At fix in the morning, Cape Virgi Mary bearing fouth, distant five miles, we hauled in f the Streight, and the strange ship still followed us.

On Monday 18. We passed the first Narrow, and as perceived the strange ship to have shaped the same coun that we had, from the time she had first seen us, shortening or making fail as we did, she became the subject of mu speculation; and as I was obliged, after I had got through the first Narrow, to bring to for the store-ship, which w a great way aftern, I imagined she would speak with a and therefore I put the ship in the best order I could. A soon as he had passed the Narrow, and saw me lying to, did the same about four miles to windward of me. In the fituation we remained till night came on, and the tide for ting us over to the fouth shore, we came to anchor; the wind however shifted before morning, and at day-break faw our satellite at anchor about three leagues to leewn of us. As it was then tide of flood, I thought of working through the second Narrow; but seeing the stranger g under way, and work up towards us, I ran directly on into Gregory Bay, and brought the ship to an anchor, wit a spring upon our cable: I also got eight of our gua which were all we could get at, out of the hold, as brought them over on one side. In the mean time, the ship continued to work up towards us, and various we treig our conjectures about her, for she shewed no colours, no ther did we. It happened about this time that the store-ship as the was endeavouring to come to an anchor near us, n aground; upon which the stranger came to an anchor all le way aftern, at the same time hoisting French colour and fending his launch, and another boat, with an anche to assist her. Still however I shewod no colours, but se my own boats, and a boat of the Tamar's, to affift the store-ship, giving orders at the same time to the officer not to suffer the French boats to come on board her, be to thank them in polite terms for the assistance they tended. These orders were punctually obeyed, and will the affistance of our own boats only, the store-ship was for

Tuesday 19. At six o'clock in the morning, I weighed out and failed between Elizabeth and Bartholomew Islands, . ith the wind at N. W. and after steering S. S. W. five or n was miles, we crossed a bank, where among the weeds we ad seven fathom water. This bank lies W. S. W. five or x miles from the middle of George's Island, and it is said other fome former accounts that in many places there is not e le bree fathom water upon it: the danger here therefore is the onfiderable, and to avoid it, it is necessary to keep near eak lizabeth's Istand till the western shore is but at a short diswar since, and then a fouthern course may be steered with kin reat safety, till the reef, which lies about four miles to he northward of Saint Anne's Point, is in fight. At oon this day, the north point of Fresh Water Bay bore wit V. by N.; and Saint Anne's Point S. by E. & E. The gun rench ship still steered after us, and we imagined that she as either from Falkland's Islands, where the French had the a settlement, to get wood, or upon a survey of the we treight. The remaining part of this day, and the next no horning, Wednesday 20. we had variable winds with this salms; in the afternoon therefore I hoisted out the boats, s, nond towed round Saint Anne's Point into Port Famine: all fix in the evening we anchored, and foon after the lour rench ship passed by us to the southward.

Here we continued till Monday 25. when both the Dolhin and Tamar having taken out of the store-ship as much rovision as they could stow, I gave the master of her, orders return to England as foon as he could get ready, and th the Tamar sailed from Port Famine, intending to ish through the Streight before the season should be too radvanced. At noon, we were three leagues distant om Saint Anne's Point, which bore N. W. and three or VOL. I. four

four miles distant from Point Shutup, which bore S. S. W. Point Shutup bears from Saint Anne's Point S. ½ E. b. the compass, and they are about four or five leagues as der. Between these two points there is a flat shoal, which runs from Port Famine before Sedger river, and three it four miles to the southward.

We steered S. S. W. with little wind along the short from Point Shutup towards Cape Forward; and about o'clock in the afternoon we passed by the French si which we faw in a little cove, about two leagues to fouthward of Point Shutup. She had hauled her sto close into the woods, and we could see large piles of the wood which she had cut down, lying on each side of he fo that I made no doubt of her having been fent out procure that necessary for their new settlement, though could not conceive why they should have come so far in the Streight for that purpose. After my return to En land, I learnt that this vessel was the Eagle, command by M. Bougainville, and that her business in the Streigh was, as I conjectured, to cut wood, for the French settle ment in Falkland's Islands. From Cape Shutup to Ca Forward, the course by compass is S. W. by S.; and the distance is seven leagues. At eight o'clock in the evening Cape Forward bore N. W. 1 W. and was distant about mile, and we brought to for the night. This part of the Streight is about eight miles over, and off the Cape had forty fathom within half a cable's length of the shor About four o'clock in the morning, Tuesday 26. we may fail; and at eight, having had light airs almost quite rou the compass, Cape Forward bore N. E. by E. distants bout four miles; and Cape Holland W. N. W. 1 W. stant about five leagues. At ten we had fresh gales at N. W. and at intervals sudden squalls, so violent as to lige us to clue all up every time they came on. however working to windward, and looking out for and choring place, endeavouring at the same time to reach bay about two leagues to the westward of Cape Forward At five o'clock I sent a boat with an officer into this to found, who finding it fit for our purpose, we enter it, and about fix o'clock anchored in nine fathom: 0 Forward bore E. & S. distant five miles; a small ill which lies in the middle of the bay, and is about a!

istant from the shore, W. by S. distant about half a mile; nd a rivulet of fresh water N. W. by W. distant three marters of a mile.

At fix o'clock the next morning, Wednesday 27. we reighed and continued our course through the Streight: rom Cape Holland to Cape Gallant, which are distant aout eight leagues, the coast lies W. I S. by the compass: Cape Gallant is very high and steep, and between this and Cape Holland lies a reach about three leagues over, called English Reach. About five miles south of Cape Gallant es a large island, called Charles's Island, which it is neessary to keep to the northward of: we sailed along the orth shore of it, at about two miles distance, and someimes much less. A little to the eastward of Cape Holand is a fair fandy bay, called Wood's Bay, in which here is good anchoring. The mountains on each fide the treight are, I think, higher, and of a more desolate apearance, than any other in the world; except perhaps the Cordeliers, both being rude, craggy, and steep, and co-

ered with fnow from the top to the bottom.

From Cape Gallant to Passage Point, which are distant bout three leagues, the coast lies W. by N. by compass. Passage Point is the east Point of Elizabeth's Bay, and is ow land, with a rock lying off it. Between this and Cape Gallant there are several islands, some of them are very mall; but the easternmost, which is Charles's Island, that as been just mentioned, is two leagues long; the next is alled Monmouth's Island, and the westermost, Rupert's sland: Rupert's Island lies S. by E. of Point Passage. These islands make the Streight narrow: between Point affage and Rupert's Island it is not more than two miles ver, and it is necessary to go to the northward of them keeping the north shore on board: we sailed within wo cable's length of it, and had no ground with forty fanom. At fix in the evening, the wind shifted to the westard, upon which we stood in for Elizabeth's Bay, and nchored in ten fathom with very good ground; the best. nchoring however is in thirteen fathom, for there was but aree or four fathom about a cable's length within us. In his bay there is a good rivulet of fresh water. We found he flood here fet very strong to the eastward; and accoring to our calculation, it flows at the full and change of H 2

moon about twelve o'clock. We found the variation two

points eafterly.

Thursday 28. At two o'clock in the afternoon, the wind being between N. W. and W. with fresh gales and squalls, we made the signal to weigh, and just as we had got the ship over the anchor, a violent gust brought it home; the ship immediately drove into shoal water, within two cables' length of the shore, upon which we let go the small bower in four fathom, and had but three fathom under our stern: the stream anchor was carried out with all possible expedition, and by applying a purchase to the capstern, the ship was drawn towards it: we then heaved up both the bower anchors, slipt the stream cable, and with the gibb and stay-sails ran out into ten sathom, and anchored with the best bower exactly in the situation from which we had been driven.

At five o'clock the next morning, March, Friday 1. the wind being northerly, and the weather moderate, we weighed again, and at seven passed Muscle Bay, which lies on the fouthern shore, about a league to the westward of Elizabeth's Bay. At eight, we were abreast of Bachelors River, which is on the north shore, about two leagues W. by N. from Elizabeth's Bay. At nine, we passed St Je rom's Sound, the entrance of which is about a league from Bachelor's River: when St Jerom's Sound was open, it bore N. W. We then steered W. S. W. by the compass for Cape Quod, which is three leagues distant from the southermost point of the Sound. Between Elizabeth Bay ann Cape Quod, is a reach about four miles over, called Crooked reach. At the entrance of Jerom's Sound, on the north fide, we saw three or four fires, and soon afterwards perceived two or three canoes paddling after us At noon Cape Quod bore W. S. W. 1 W. distant four of five miles, and foon after, having light airs and calms, we drove to the eastward with the flood tide; in the mean time the canoes came up, and after having paddled about ns fome time, one of them had the resolution to come on board. The canoe was of bark, very ill made, and the people on board, which were four men, two women, and a boy, were the poorest wretches I had ever seen. They were all naked, except a stinking seal skin that was thrown loosely over their shoulders; they were armed, however,

with bows and arrows, which they readily gave me in reurn for a few beads, and other trifles. The arrows were made of a reed, and pointed with a green stone: they were about two feet long, and the bows were three feet: he cord of the bow was the dried gut of some animal. In the evening, we anchored abreast of Bachelor's River, n fourteen fathom. The entrance of the River bore N. y E. distant one mile, and the northermost point of St erom's Sound W. N. W. distant three miles. About hree quarters of a mile eastward of Bachelor's River, is a hoal, upon which there is not more than fix feet water when the tide is out: it is distant about half a mile from he shore, and may be known by the weeds that are upon t. The tide flows here, at the full and change of the moon, about one o'clock. Soon after we were at anchor, everal Indians came on board us, and I made them all preents of beads, ribands, and other trifles, with which they ppeared to be greatly delighted. This visit I returned by going on shore among them, taking only a few people with me in my jolly boat, that I might not alarm them by numbers. They received us with great expressions of kindness, and to make us welcome, they brought us some berries which they had gathered for that purpose, and which, with a few mussels, seem to be a principal part, if not the whole of their subsistence.

Saturday 2. At five o'clock in the morning, we weighed and towed with the tide, but at ten, having no wind, and finding that we drove again to the eastward, we anthored, with the stream anchor in fifteen fathom, upon a bank which lies about half a mile from the north shore: fter veering about two-thirds of a cable, we had five and orty fathom along-fide and still deeper water at a little listance. The south point of Saint Jorom's Sound bore N. N. E. distant two miles, and Cape Quod W. S. W. listant about eight miles. From the fouth point of Saint erom's Sound, to Cape Quod, is three leagues, in the diection of S. W. by W. The tides in this reach are excedingly strong, though very irregular; we found them et to the eastward from nine o'clock in the morning till ive o'clock the next morning, and the other four hours, rom five to nine, they set to the westward. At twelve clock at night, it began to blow very hard at W. N. W. H 3 and

and at two in the morning, Saturday 3. the ship drove off the bank: we immediately hove the anchor up, and found both the flukes broken off; till three o'clock we had no ground, and then we drove into fixteen fathom, at the entrance of Saint Jerom's Sound; as it still blewa storm, we immediately let go the best bower, and veered to half a cable. The anchor brought the ship up at so critical a moment, that we had but five fathom, and even that depth was among breakers. We let go the small bower under foot, and at five, finding the tide fet to the westward, and the weather more moderate, we got up both the anchors, and kept working to windward. At ten, we found the tide fetting again strongly to the eastward, and we therefore fent the boat back to feek for an achoring place, which the found in a bay on the north shore, about four miles to the eastward of Cape Quod, and a little within some small islands: we endeavoured to get into this bay, but the tide rushed out of it with such violence, that we found it im possible, and at noon, bore away for York Road, at the entrance of Bachelor's River, where we anchored about an hour afterwards.

At fix o'clock the next morning, Monday 4. we weigh ed, and worked with the tide, which fet the same as the day before, but we could not gain an anchoring-place, for that at noon we bore away for York Road again. I took this opportunity to go up Bachelor's River in my jolly boat, as high as I could, which was about four miles: in some places I found it very wide and deep, and the water was good, but near the mouth it is so shallow at low was

ter, that even a small boat cannot get into it.

ter, that even a small boat cannot get into it.

Tuesday 5. At six o'clock we weighed again, and at ag a eight, it being stark calm, we sent the boats a head to tow; at eleven, however, the tide fet so strong from the westward, that we could not gain the bay on the north shore, which the boat had found for us on the 4th, and which was an excellent harbour, fit to receive five or it fail: we were therefore obliged to anchor upon a bank, it forty-five fathom, with the stream anchor, Cape Quo bearing W. S. W. distant five or fix miles, the fouth point of the island that lies to the east of the Cape, being ju in one with the pitch of it, and a remarkable stone patch on the north shore bearing N. 1 W. distant half a mile

Close to the shore here, the depth of water was seventyive fathom. As foon as we were at anchor, I fent an officer to the westward to look out for a harbour, but he did not succeed. It was calm the rest of the day, and all night, the tide fetting to the eastward from the time we inchored till fix o'clock the next morning, Wednesday 6. when we weighed, and were towed by the boats to the westward. At eight, a fresh breeze sprung up at W. S. W. and W.; and at noon, Cape Quod bore E. by S. at he distance of about five miles. In this situation I sent and the boats out again to look for an anchoring place, and und bont noon, by their direction, we anchored in a little bay ere on the fouth shore, opposite to Cape Quod, in five and wenty fathom, with very good ground. A fmall rocky fland bore W. by N. at the distance of about two cables' ength, the eastermost point E. 1 S. and Cape Quod N. E. by N. distant about three miles: in this place we had hell-fish of various kinds in great plenty. The Tamar, the not being able to work up to us, anchored about two o'at an clock in the bay on the north shore, about fix miles to the astward of Cape Quod, which has been mentioned alreaeightly. During the night, it was stark calm, but in the sthe norning, Thursday 7. having little airs of wind westerly, e, for weighed about eight o'clock, and worked with the tide. took At noon, Cape Quod bore E. by S. distant between two and bree leagues, and Cape Monday, which is the westermost s: in and in fight on the fouth shore, W. by N. distant about ten water releven leagues. This part of the Streight lies W. N. W. www W. by the compass, and is but four miles over; so that he craggy mountains which bound it on each side, towerand at my above the clouds, and covered with everlasting snow, ad to live it the most dreary and desolate appearance that can m the e imagined. The tides here are not very strong; the north bb sets to the westward, but with an irregularity for n, and which it is very difficult to account. About one o'clock, or fit he Tamar anchored in the bay on the fouth shore, opponk, it te to Cape Quod, which we had just left, and we conti-Qued working to windward till feven in the evening, when a point re anchored in a small bay on the north shore, about five pate round. This bay may be known by two large rocks that a mile ppear above water, and a low point which makes the east Cloke

part of the bay. The anchoring-place is between the two rocks, the eastermost bearing N. E. I E. distant about two cables' length, and the westerwost, which is near the point, W. N. W. 1 W. at about the same distance; there is also a small rock which shows itself among the weeds at low water, and bears E. I. N. distant about two cables' length. If there are more ships than one, they may anchor farther out in deeper water. During the night it was calm, and the weather became very foggy; but a bout ten in the morning, Friday 8. it cleared up, and I went on shore. I found abundance of shell-fish, but faw no traces of people. In the afternoon, while the people were filling water, I went up a deep lagoon, which lies just round the westermost rock: at the head of it I found a very fine fall of water, and on the east side several little coves, where ships of the greatest draught may lie in perfect fecurity. We saw nothing else worthy of notice, and therefore, having filled our boat with very large mussels we returned.

At seven o'clock next morning, Saturday 9. we weigh ed and towed out of the bay, and at eight, saw the Tamar very far aftern, steering after us. At noon, we had little wind at E. N. E. but at five o'clock, it shifted to W. N. W. and blew fresh. At six, we were abreast of Cape Monday, and at fix the next morning, Sunday 10. Cape Upright bore E. by S. distant three leagues. From Cape Monday to Cape Upright, which are both on the fout shore, and distant from each other about five leagues, the course is W. by N. by the compass: the shore on each side is rocky, with broken ground. At about half an hour after the a ter seven, we had a very hard squall, and the weather be ing then exceedingly thick, we suddenly perceived a rec of rocks close under our lee-bow, upon which the sea brok very high: we had but just time to tack clear of them, and if the ship had missed stays, every soul on board must in vitably have perished. These rocks lie at a great distant from the fouth shore, and are about three leagues to the north of Cape Upright. At nine the weather cleated little, and we faw the entrance of Long Reach, upo which we bore away, keeping nearest the fouth shore, hopes of finding an anchoring-place. At ten, we had flron gales and thick weather, with hard rain, and at noon,

ere again abreast of Cape Monday, but could find no anhoring place, which, however, we continued to feek, ill fleering along the fouth shore; and were soon after pined by the Tamar, who had been fix or seven leagues the eastward of us all night. At six in the evening, we nchored in a deep bay, about three leagues to the eastard of Cape Monday: we let go the anchor in five and wenty fathom, near an island in the bottom of the bay;

the before we could bring up the ship, we were driven off,
and the anchor took the ground in about sifty fathom. The
streme points of the bay bore from N. W. to N. E. by E.

ople and the island W. \frac{1}{2} S.: we veered to a whole cable, and

strength or was about a cable's length from the nearest ut before we could bring up the ship, we were driven off, lies he anchor was about a cable's length from the nearest ound fore. In the night, we had fresh gales westerly, with ittle dden squalls and hard rain; but in the morning, the per leather became more moderate, though it was still thick, and and the rain continued. As a great swell set into this flels ace, and broke very high upon the rocks, near which e lay, I got up the anchor, and warped the ship to a eigh ank where the Tamar was riding: we let go our anchor amat fourteen fathom, and moored the stream anchor to the little stward, in forty-five fathom. In the bottom of this bay V. N. ere is a bason, at the entrance of which there is but three Cape thom and an half at low water, but within there is Capt n fathom, and room enough for fix or seven sail to lie

Cape here no wind can hurt them.

South We continued here till Friday 15. and during all that s, the me had one continued storm, with impenetrable fogs, h side d incessant rain. On Teusday 12. I sent out the boat, th an officer, to look for harbours on the southern shore:
er be e boat was absent till Thursday 14. and then returned, a rec th an account that there were five bays between the ship's tion and Cape Upright, where we might anchor in great n, and ety. The officer told me, that near Cape Upright he t inc d fallen in with a few Indians, who had given him **Stance** dog, and that one of the women had offered him a ild which was fucking at her breaft. It is scarcely nesary to say that he refused it, but the offer seems to upo grade these poor forlorn savages more than any thing in ore, le rir appearance or manner of life: it must be a strange deflrom wity of nature that leaves them destitute of affection for tir offspring, or a most deplorable situation that impres-

fes necessities upon them by which it is surmounted. Som hills, which, when we first came to this place, had no sno upon them, were now covered, and the winter of this dreat ry and inhospitable region seemed to have set in at once the poor seamen not only suffered much by the cold, but ha fcarcely ever a dry thread about them: I therefore diffri buted among the crews of both the ships, not exception the officers, two bales of a thick woollen stuff, called Fear nought, which is provided by the government, so the every body on board had now a warm jacket, which this time was found both comfortable and falutary.

Friday 15. At eight o'clock in the morning, we weigh ed and made fail, and at three o'clock in the afternoon, w were once more abreast of Cape Monday, and at five, w anchored in a bay on the east side of it. The pitch of the Cape bore N. W. distant half a mile, and the extrem points of the bay from E. to N. by W. We lay at abou half a cable's length from the nearest shore, which was

low island between the ship and the Cape.

At fix o'clock the next morning, Saturday 16. w weighed, and found that the palm was gone from the sma bower anchor. The wind was at W. N. W. with har rain: at eight o'clock, we found a strong current setting us to the eastward, and at noon, Cape Monday bore W. A tha W. distant two miles. The Tamar being to windward us, fetched into the bay, and anchored again. We contid m nued to lose ground upon every tack, and therefore, at two has o'clock, anchored upon the fouthern shore in sixteen fa quall thom, about five miles to the eastward of Cape Monday que At three, however, I weighed again, for the boat having the sounded round the ship, found the ground rocky. The wind was N. W. with hard rain, and we continued work ing all the rest of the day, and all night, every man of board being upon deck the whole time, and every one we to the skin, for the rain, or rather sheets of water that can down, did not cease a moment.

Sunday 17. In the morning, we had again the mortil cation to find that, notwithstanding all our labour, we ha lost ground upon every tack, in consequence of the current which continued to fet with great force to the east wan At eight o'clock, we bore away, and at nine, anchored the same bay from which we sailed on the 15th.

Monday 18. Tuesday 19. The wind continued W. and drea er was exceedingly bad, with hard squalls and heavy rain.

I had sent an officer with a boat to sound bay on the north shore, but he found no anchorage in it.

dishing the state of the y following, Thursday 21. though the wind was from weigh N. W. to S. W. we weighed, and once more stood on, we tof the bay; the current still set very strongly to the se, we stward, but at noon, we found that we had gained about of the mile and a half in a contrary direction. The wind now came variable, from S. W. to N. W. and at five in the about ternoon, the ship had gained about four miles to the was flward; but not being able to find an anchoring-place, d the wind dying away, we drove again very fast to the flward with the current. At fix, however, we ancholin forty fathom, with very good ground, in a bay aut two miles to the westward of that from which we setting seed in the morning. A swell rolled in here all night, so W.N. that our situation was by no means desirable, and therevardo re, although the wind was still at W. S. W. we weighed d made fail about eight o'clock the next day, Friday 22.

at two had likewise incessant rain, so that the people were concens fail ally wet, which was a great aggravation of their faonday rue; yet they were still cheerful, and, what was yet less havin be expected, still healthy. This day, to our great joy, found the current fetting to the westward, and we gainground very fast. At fix in the evening, we anchored the bay on the east fide of Cape Monday, where the mar lay in eighteen fathom, the pitch of the Cape beag W. by N. distant half a mile. We found this place y safe, the ground being excellent, and there being om enough for two or three ships of the line to moor.

## CHAP. VII.

The Passage from Cape Monday, in the Streight of Magella into the South Seas; with some General Remarks on h Navigation of that Streight.

A T eight the next morning, Saturday 23. we weight and soon after we made sail opened the South So from which such a swell rolled in upon us as I have so dom seen. At four o'clock in the afternoon, we and red in a very good bay, with a deep found at the botto of it, by which it may be known, about a league tot eastward of Cape Upright, in fourteen fathom. The treme point of the bay bore from N. W. to N. E. by and Cape upright W. N. W. about a cable's length tot eastward of a low island which makes the bay.

Sunday 24. At three o'clock in the morning, I fent boat, with anofficer from each ship, to look for anchori places to the weltward; but at four in the afternoon the returned without having been able to get round Cape U

right.

The next morning, Monday 25. westward, and abo fix in the evening they returned, having been about to leagues, and found two anchoring-places, but neither them were very good. We made fail, however, abo eight in the forenoon of the next day, Tuesday 26. a at three, Cape Upright bore E. S. E. distant about the leagues, a remarkable cape on the north shore at the sa time bearing N. E. distant four or five miles. This ca which is very lofty and steep, lies N. N. W. by comp from Cape Upright, at the distance of about three leagu The fouth shore in this place had a very bad appear ance, many funken rocks lying about it to a consider distance, upon which the sea breaks very high. the weather became very thick, and in less than half hour we saw the south shore at the distance of about mile, but could get no anchoring-place; we therefore ked, and stood over to the north-shore. At half hour after fix, I made the Tamar a fignal to come under stern, and ordered her to keep a-head of us all night, and show lights, and fire a gun every time she changed her u

t seven, it cleared up for a moment just to show us the orth shore, bearing W. by N.; we tacked immediately, nd at eight the wind shifted from N. N. W. to W. N. W. nd blew with great violence. Our situation was now very arming; the storm increased every minute, the weather as extremely thick, the rain seemed to threaten another eluge, we had a long dark night before us, we were in a arrow channel, and furrounded on every fide by rocks and reakers. We attempted to clew up the mizen topsail, at before this service could be done it was blown all to gs: we then brought to, with the main and fore topfail ofe reefed, and upon the cap, keeping the ship's head to e south-west; but there being a prodigious sea, it broke ne e ver us so often that the whole deck was almost continuly under water. At nine, by an accidental breaking of e fog, we saw the High Cape on the north shore that as been just mentioned, bearing east, at about a mile difnce, but had entirely lost fight of the Tamar. At half. hour after three in the morning, Wednesday 27. we ddenly perceived ourselves close to a high land on the outh shore, upon which we wore, and brought to the orthward. The gale still continued, if possible, with inreasing violence, and the rain poured down in torrents, that we were in a manner immersed in water, and exeded every moment to be among the breakers. The long ished-for day at length broke, but the weather was still 6. a thick that no land was to be feen, though we knew it ould not be far distant, till after six, when we saw the uth shore at about the distance of two miles: and as on after, to our great satisfaction, we saw the Tamar: this time Cape Monday bore S. E. distant about four eagu iles, and the violence of the gale not abating, we bore way. About seven, both ships came to an anchor in the my which lies to the eastward of Cape Monday, notwithanding the sea that rolled in; for we were glad to get anhorage any where. We had now been twice within four agues of Tuesday's Bay, at the western entrance of the treight, and had been twice driven back ten or twelve agues by fuch storms as we had now just experienced. Then the season is so far advanced as it was when we attempd the passage of this Streight, it is a most difficult and dantrous undertaking, as it blows a hurricane incessantly Vol. I. night

night and day, and the rain is as violent and constant the wind, with fuch fogs as often render it impossible tod cover any object at the distance of twice the ship's lengt This day our best bower cable being quite rubbed to pi ces, we cut it into junk, and bent a new one, which rounded with old rigging eight fathom from the anchor

In the afternoon of the day following, Thursday the Tamar parted a new best bower cable, it being cut the rock, and drove over to the east side of the bay, who the was brought up at a very little distance from some rock against which she must otherwise have been dashed to pi

ces.

Friday 29. At seven o'clock in the morning, we weigh ed and found our small bower cable very much rubbed the foul ground, fo that we were obliged to cut no k than fix and twenty fathom of it off, and bend it again In about half an hour, the Tamar, being very near the rocks, and not being able to purchase her anchor, mad fignals of distress. I was therefore obliged to stand intoth bay again, and having anchored, I fent hawfers on boar the Tamar, and heaved her up while the purchased hera chor, after which we heaved her to windward, and at non being got into a proper birth, she anchored again. W continued in our station all night, and the next morning ofeel Saturday 30. a gale came on at W. N. W. which was sh more violent than any that had preceded it; the water wa torn up all around us, and carried much higher than the masts heads, a dreadful sea at the same time rolling in; the that, knowing the ground to be foul, we were in conflat apprehension of parting our cables, in which case we mu fac have been almost instantly dashed to atoms against the rock in the that were just to leeward of us, and upon which the feed to broke with inconceiveable fary, and a noise not less low bark than thunder. We lowered all the main and fore yard en b let go the small bower, veered a cable and an half on the best bower, and having bent the sheet cable, stood by the anchor all the rest of the day, and till midnight, the seare often breaking half way up our main shrouds. About of had s in the morning, Sunday 31. the weather became fom before what more moderate, but continued to be very dark, ra weath my, and tempelluous, till midnight, when the wind shifte their ant

tod

hora

the S. W. and foon afterwards it became comparatively im and clear.

engl The next morning. April, Monday I. we had a stark opinion, with now and then some light airs from the eastard; but the weather was again thick with hard rain, d we found a current fetting strongly to the eastward. t four o'clock we got up the lower yards, unbent the cut eet cable, and weighed the small bower; at eight we who eighed the best bower, and found the cable very much rock bed in feveral places, which we confidered as a great o pi isfortune, it being a fine new cable, which never had veig schor; but soon after, it being calm, and a thick fog coed bring on with hard rain, we veered away the stream cable, to ke and with a warp to the Tamar, heaved the ship upon the again ank again, and let go the small bower in two and twenty ar the thom.

At six in the evening, we had strong gales at W. N. W. toth ith violent squalls and much rain, and continued our staboar son till the morning of Wednesday 3. when I sent the lera l'amar's boat, with an officer from each ship, to the westnoor and, in fearch of anchoring-places on the fouth shore; mind at the same time I sent my own cutter with an officer rain office anchoring-places on the north shore.

The cutter returned the next morning, Thursday 4. at

erw x o'clock, having been about five leagues to the westward n the pon the north shore, and found two anchoring-places. n; The officer reported, that having been on shore, he had allen in with fome Indians, who had with them a canoe mu of a construction very different from any that they had seen rock in the Streight before; this vessel consisted of planks sewine is d together, but all the others were nothing more than the low ark of large trees, tied together at the ends, and kept oyard en by short pieces of wood, which were thrust in transn the ersely between the two sides, like the boats which childby the en make of a bean-shell. The people, he said, were the he he hearest to brutes in their manner and appearance of any he had seen: they were, like some which we had met with some before, quite naked, notwithstanding the severity of the , ra weather, except part of a seal skin which was thrown over hifte their shoulders; and they eat their food, which was such as no other animal but a hog would touch, without any dref-

fing:

fing: they had with them a large piece of whale blubber, which stunk intolerably, and one of them tore it to piece with his teeth, and gave it about to the rest, who devoured it with the voracity of a wild beaft. They did not however look upon what they faw in the possession of our people with indifference; for while one of them was afleep, they cut off the hinder part off his jacket with a sharp flint which they use as a knife.

About eight o'clock, we made fail, and found little or no current. At noon, Cape Upright bore W. S. W. dif. tant three leagues; and at fix in the evening, we anchord in the bay, on the fouthern shore, which lies about a league to the eastward of the cape, and had fifteen fathom water,

While we were lying here, and taking in wood and was ter, feven or eight Indians in a canoe came round the well tern point of the bay, and having landed opposite to the ship, made a fire. We invited them to come on board by all the figns we could devise, but without success; I there fore took the jolly boat, and went on shore to them. I introduced myself by making them presents of several trifles, with which they seemed to be much gratified, and we became very intimate in a few minutes: after we had spent fome time together, I fent away my people, in the boat, for some bread, and remained on shore with them alone, When the boat returned with the bread, I divided it a mong them, and I remarked with equal pleasure and surprise, that if a bit of the biscuit happened to fall, not one of them offered to touch it till I gave my consent. In the mean time some of my people were cutting a little grafi for two or three sheep which I had still left on board, and at length the Indians perceiving what they were doing, ran immediately, and tearing up all the weeds they could get, carried them to the boat, which in a very short time was filled almost up to her gunwale. I was much gratified by this token of their good will, and I could perceive that they were pleased with the pleasure that I expressed upon the occasion: they had indeed taken such a fancy to us than when I returned on board the boat, they all got into their canoe, and followed me. When we came near the Thip, however, they stopped, and gazed at her as if helding furprife by a mixture of aftonishment and terror; but a last, though not without some difficulty, I prevailed upon four

four or five of them to venture on board. As foon as they entered the ship I made them several presents, and in a verv little time they appeared to be perfectly at ease. As I was very defirous to entertain them, one of the midshipmen played on the violin, and some of my people danced; at this they were so much delighted, and so impatient to how their gratitude, that one of them went over the ship's side into the canoe, and fetched up a seal skin bag of red paint, and immediately smeared the fiddler's face all over with it: he was very defirous to pay me the same compliment, which, however, I thought fit to decline; but he made many very vigorous efforts to get the better of my modesty, and it was not without some difficulty that I defended myself from receiving the honour he designed me in my own despight. After having diverted and entertained them feveral hours, I intimated to them that it would be proper for them to go on shore; but their attachment, was such, that it was by no means an easy matter to get them out of the ship. Their canoe was not of bark, but of planks fewed together.

On Sunday 7. at fix o'clock in the morning, we weighed, with a moderate breeze at E. N. E. and fine weather. At seven, we were abreast of Cape Upright; and at noon, it bore E. S. E distant four leagues: soon after we tried the current, and found it set to the eastward at the rate of aknot and an half an hour. At three it fell calm, and the current driving us to the eastward very fast, we dropthe ped an anchor, which before it took the ground was in one

graft hundred and twenty fathem.

and This day, and not before, the Tamar's boat returned from the westward: she had been within two or three leagues of Cape Pillar, and had found several very good

time anchoring places on the fouth shore.

At one o'clock the next morning, Monday 8. having a fresh gale at west, we weighed, not withstanding the weaipon ther was thick, and made fail; at eleven it blew very hard, us, with violent rain and a great sea, and as we perceived that into we rather lost than gained ground, we stood in for a bay on the fouth shore, about four leagues to the westward of Cape Upright, and anchored in twenty fathom: the tal ground was not good, but in other respects this was one of the best harbours that we had met with in the Streight,

for it was impossible that any wind should hurt us. Then being less wind in the afternoon, and it inclining a little towards the fouth, we namoored at two, and at four, the hat wind having then come round to the S. S. E. and being that moderate breeze, we weighed and steered to the westwards hany we made about two leagues and an half, but night then co ming on, we anchored, not without great difficulty, in which very good bay on the fouth shore in twenty fathom. A very violent gufts came from the land, we were very near th being driven off before we could let go an anchor, and i we had not at last succeeded we must have passed a dread ful night in the Streight: for it blew a hurricane from the lown time we came to an anchor till the morning, with violent inder rain, which was sometimes intermingled with snow.

At fix o'clock, Tuesday 9. the wind being still fres ut t and squally at S. S. E. we weighed and steered W. by N he v along the fouth shore. At eleven, we were abreast of on t Cape Pillar, which by compass is about fourteen league to i W. 1 N. from Cape Upright. Cape Pillar may be known It by a large gap upon the top, and when it bears W. S. W ount an island appears off it which has an appearance somewhat assay like a hay-stack, and about which lie several rocks. The Streight to the eastward of the Cape is between seven and hips and eight leagues over; the land on each side is of a more ope derate height, but it is lowest on the north shore, the ho fouth shore being much the boldest, though both are crag fac gy and broken. Westminster Island is nearer to the north pe y than the fouth shore; and, by the compass, lies N. Enight from Cape Pillar. The land on the north shore, near the hink west end of the Streight, makes in many islands, and rock after upon which the fea breaks in a tremendous manner. The Jand about Cape Victory is distant from Cape Pillar about hich ten or eleven leagues, in the direction of N. W. by Melery From the Cape westward, the coast trends S. S. W. 1 W gre to Cape Deseada, a low point, off which lie innumerable my from Cape Deseada lie some dangerous rocks, called by Sor an John Narborough the Judges, upon which a mountainor forf always breaks with inconceiveable fury. Four fma islands, called the islands of Direction, are distant from Cape Pillar about eight leagues, in the direction of N. W by W. When we were off this Cape it was stark calm and then but I never saw such a swell as rolled in here, nor such a little arge as broke on each shore. I expected every moment the hat the wind would spring up from its usual quarter, and ing; hat the best which could happen to us would be to be driven any leagues up the Streight again. Contrary however to shich I spread all the sail that it was possible for the ship a bear, and ran off from this frightful and desolate coast the rate of nine miles an hour; so that by eight o'clock and in the evening we had lest it twenty leagues behind us. I read and now to make the ship as stiff as possible, I knocked much own our after bulk-head, and got two of the boats inder the boom; so that we had nothing upon the skids steel at the jolly boat; and the alteration which this made in the vessel is inconceivable: for the weight of the boats upon the skids made her crank, and in a great sea they were sague so in danger of being lost.

ague so in danger of being lost.

It is probable, that whoever shall read this account of the difficulties and dangers which attended our ewhat affage through the Streight of Magellan, will conclude, The hat it ought never to be attempted again; but that all en and hips which shall hereafter sail a western course from Eue, the however, who have been twice round Cape Horn, am crag fa different opinion. I think that at a proper season of northe year, not only a fingle veffel, but a large squadron N. E sight pass the Streight in less than three weeks; and I earth hink, to take the proper season, they should be at the rock aftern entrance some time in the month of December. The ne great advantage of this passage, is the facility with about thich fish is almost every where to be procured, with wild by Melery, scurvy-grass, berries, and many other vegetables great abundance; for to this I impute the healthiness neral my thip's company, not a fingle man being affected with S. We se scurvy in the slightest degree, nor upon the sick list by S or any other disorder, notwithstanding the hardship and tainor bour which they endured in the passage, which cost us r fma ven weeks and two days, as we entered the Streight on t from unday, February 17. and quitted it on Tuesday, April N. W

Wood and water also are to be procured almost at eveanchoring-place beyond Fresh Water Bay. Our sufferings

calm

b

ferings I impute wholly to our passing the Streight just at the fun approached the equinox, when, in this high latin tude, the worst weather was to be experied; and indeed the weather we had was dreadful beyond all description,

## CHAP. · VIII.

The Run from the Western Entrance of the Streight of Ma. gellan, to the Islands of Disappointment.

HAVING cleared the Streight, we purfued our course to the wellward, as appears by the track in the chart, till Friday, April 26. when we discovered the island of Masafuero, bearing W. N. W. 1 W. distant about sixteen leagues; but as to the northward it was hazy, the island of Don Juan Fernandes was not in fight. During this run, the variation had gradually decreased from 22° to 9° 36' E.

We bore away for Masafuero, and at sun set, being within about seven leagues of it, we brought to, and afterwards kept the wind all night. At day-break the next day, Saturday 27. we bore away again for the island, at the same time sending an officer, with a boat from each ship, to found the eastern side of it. About noon, the middle of the island bore W. distant about three miles, and as I saw the boats run along the shore, without being able to land any where for the furf, I bore down to the north part of the island, off which a reef runs for the dile tance of about two miles, to lay by for them. This island is very high, and the greater part of it is covered with wood; goats were feeding, and they had a green and pleasant ap pearance. When the boats returned, the officer informed me that he had found a bank, on the east side of the island nearest to the south point, at a considerable distance from the shore, where we might anchor, and opposite to which there was a fine fall of fresh water; but near the north point, he said, he could find no anchorage. The boats brought off a great quantity of very fine fish, which they had caught with hook and line near the shore; and as soon as we had taken them on board, which was late in the afternoon, we made fail, and worked to windward in the then night.

Sunday 28. At feven o'clock in the morning, we anhored with the small bower, on the bank which the oats had discovered in twenty four fathom, with black andy ground. The extreme points bore from S. to N. W. and the fall of water bore S. S. W. distant about a nile from the ship's station. This part of the island lies orth and fouth, and is about four miles long: the foundngs are very regular, from twenty to fifteen fathom, wihin two cables' length of the shore. Soon after we were ome to an anchor, I sent out the boats to endeavour to tet some wood and water, but as I observed the shore to erocky, and a furf to break with great violence upon it, I of redered all the men to put on cork-jackets, which had been teen ent with us to be made use of upon such occasions. By he help of these jackets, which not only affisted the men n swimming, but prevented their being bruised against 6'E. the rocks, we got off a confiderable quantity of water and eing wood, which, without such affistance, we could not have af one: there was, however, another species of danger here, gainst which cork-jackets afforded no defence, for the sea bounded with sharks of an enormous size, which when each hey faw a man in the water, would dart into the very the furf to seize him: our people, however, happily escaped niles, them, though they were many times very near: one of being hem, which was upwards of twenty feet long, came close o one of the boats that was watering, and having seized large seal, instantly devoured it at one mouthful; and I and it myself saw another of nearly the same size, do the same ood; hing under the ship's stern. Our people killed and sent feem of feveral of the goats, which we thought as good as the ers of venison in England; and I observed, that one of them t ap ppeared to have been caught and marked, its right ear ormed seing flit in a manner that could not have happened by acident. We had also fish in such plenty, that one boat from rould, with hooks and lines, catch, in a few hours, as which nuch as would serve a large ship's company two days: north they were of various forts, all excellent in their kind, and boats pany of them weighed from twenty to thirty pounds. they

This evening, the furf running very high, the gunner foot and one of the seamen who were on shore with the waterrs, were afraid to venture off, and the boat therefore, then she came on board the last time, left them behind her.

The next day, Monday 29. We found a more convenient watering place, about a mile and a half to the northward of the ship, and about the middle way-between the north and south points of the island, there being at this place less surf than where the boats sirst went on shore. The tide here set twelve hours to the northward, and twelve to the southward, which we found very convenient, for as the wind was southerly, with a great swell, the boats could not otherwise have got on board with their water. We got off ten tons of water from the new watering-place this day, and in the afternoon, I sent a boat to setch off the gunner and seaman, who had been lest on shore at the old watering-place the night before; but the surf was still so great, that the seaman, who could not swim, was afraid to venture: he was therefore again lest behind, and

the gunner stayed with him.

As foon as this was reported to me, I fent another boat to inform them that as, by the appearances of the weather, there was reason to believe it would soon blow hard, I was afraid I might be driven off the bank in the night, the consequence of which would be that they must be left behind upon the island. When the boat came to the furf, the people on board delivered my message, upon which the gunner swam through the surf, and got on board her; but the feaman, though he had a cork-jacket on, faid he was fure he should be drowned if he attempted to get off to the boat, and that, chusing rather to die a natural death, he was determined at all events to remain upon the island: he then took an affectionate leave of the people, withing them all happiness, and the people on board returns ed his good wishes. One of the midshipmen, however, just as the boat was about to return, took the end of a rope in his hand, jumped into the sea, and swam through the furf to the beach, where poor John still continued ruminating upon his fituation, in a dejected attitude, and with most disconsolate length of countenance. The midship man began to expostulate with him upon the strange resolution he had taken, and in the mean time having made! running knot in his rope, dextroully contrived to throw it round his body, calling out to his companions in the boat who had hold of the other end of it, to haul away; they instantly eni.

Infantly took the hint, and the poor seceder was very soon ragged through the surf into the boat: he had, however, wallowed so great a quantity of water, that he was to all ppearance dead, but being held up by the heels, he soon ecovered his speech and motion, and was perfectly well he next day. In the evening, I removed Captain Mouat som the Tamar, and appointed him Captain of the Dolhin, under me; Mr Cumming, my First Lieutenant, I ppointed Captain of the Tamar, taking Mr Carteret, her sirst Lieutenant, on board in his room, and gave Mr Kenal, one of the mates of the Dolphin, a commission as Seond Lieutenant of the Tamar.

On Tuesday 30. At seven o'clock in the morning, we reighed, and steered to the northward, along the east and orth east side of the island, but could find no anchoringace; we bore away therefore, with a fresh gale at S. E. nd hazy weather, and at noon, the middle of the island as distant eight leagues, in the direction of S. S. E. I ontinued to steer N. 3° W. the next day, and at noon on he 2d of May, I changed my course, and steered W. inending, if possible, to make the land, which is called Dais's Land in the charts, and is laid down in latitude 27° o'S. and about five hundred leagues west of Copiapo in thili; but on the 9th, finding little prospect of getting to he westward, in the latitude which I at first proposed, beng then in latitude 26° 46' S., longitude 94° 45' W. nd having a great run to make, I determined to steer a orth-west course till I got the true trade wind, and then oftand to the westward till I should fall in with Solomon's stands, if any such there were, or make some new discoery.

On Friday 10. We saw several dolphins and bonnettas bont the ship, and the next day some straggling birds, shich were brown on the back and the upper part of their sings, and white on the rest of the body, with a short beak, and a short pointed tail. The variation was now decreased of 4° 45' E. our latitude was 24° 30' S. our longitude 7° 45' W.

On Tuesday 14. We saw several grampuses, and more the birds which have just been described, so that, imaining we might be near some land, we kept a good look-

out, but saw nothing. In latitude 23° 2' S. longitude 101° 28' W. the variation, by azimuth, was 3° 20' E.

On the morning of the 16th, we saw two very remarkable birds; they slew very high, were as large as get and all over as white as snow, except their legs, white were black: I now began to imagine that I had pass some land, or islands, which lay to the southward of us, is the last night we observed, that, although we had general a great swell from that quarter, the water became qui smooth for a few hours, after which the swell returned.

On Wednesday 22. being in latitude 20° 52' S., long tude 115° 38' W. with a faint breeze at E. S. E. weh so great a swell from the southward, that we were in perpetual danger of our masts rolling over the ship's side, that I was obliged to haul more to the northward, as we to ease the ship, as in hopes of getting the true trade wind, which we had not yet; and now to my great concern some of my best men began to complain of the search vy. This day for the first time, we caught two bonnests; we also saw several tropic birds about the ship, an observed that they were larger than any we had seen before; their whole plumage was white, and they had to long feathers in the tail. The variation now had change in its direction, and was 19' W.

On Sunday 26. we saw two large birds about the shi which were all black, except the neck and the beak, which were white; they had long wings, and long seathers their tail, yet we observed that they slew heavily, at therefore imagined that they were of a species which do not usually sly far from the shore. I had stattered myse that, before we had run six degrees to the northward Masasuero, we should have found a settled trade-wind to the S. E. but the winds still continued to the north, though we had a mountainous swell from the S. W. Our latitude was now 16° 55' S., longitude 127° 55 W. and here the

'needle, at this time, had no variation.

On Teusday 28. We saw two sine large birds about the ship, one of which was brown and white, and the other black and white; they wanted much to settle upon the yards, but the working of the ship frighted them.

On Friday 31. The wind shifted from N. by W. to I W. by W. and the number of birds that were now about

thip was very great; from these circumstances, and our wing lost the great south-west swell, I imagined some land be near, and we looked out for it with great diligence, our people began now to fall down with the scurvy very

We saw no land however till one o'clock in the morning Friday the 7th of June, when we were in latitude 14° S., longitude 144° 58' W.; and observed the variation be 4° 30' E. After making the land, I hauled upon wind under an easy sail till the morning, and then a low nall island bore from us W. S. W. at the distance of about two leagues. In a very short time we saw another and to windward of us, bearing E. S. E. distant between the and sour leagues: this appeared to be much larger and that which we first discovered, and we must have passed.

I flood for the small island, which as we drew near it for and a most beautiful appearance; it was surrounded by a onne such of the finest white sand, and within, it was covered o, at with tall trees, which extended their shade to a great disd to magined, without underwood. We judged this island to lange stabout five miles in circumference, and from each end of we saw a spit running out into the sea, upon which the this age broke with great fury; there was also a great furf all which bund it. We soon perceived that it was inhabited; for ers any of the natives appeared upon the beach, with spears y, at their hands that were at least fixteen feet long. They ch de resently made several large fires, which we supposed to be nyfel fignal; for we immediately perceived several fires upon ard the larger island that was to windward of us, by which we toth new that also to be inhabited. I sent the boat with an houg ficer to look for an anchoring-place, who, to our great ere the had been all round the island, and that no bottom could e found within less than a cable's length of the shore, out the mich was surrounded close to the beach with a steep coral oth ock. The scurvy by this time had made dreadful havock on the mong us, many of my best men being now confined to heir hammocks; the poor wretches who were able to crawl to pon the deck, stood gazing at this little paradife which about lature had forbidden them to enter, with sensations which Vol. I.

cannot easily be conceived; they saw cocoa-nuts in gre abundance, the milk of which is perhaps the most power ful antiscorbutic in the world: they had reason to suppor that there were limes, bananas, and other fruits which a generally found between the tropics; and to increase the mortification they faw the shells of many turtle scattere about the shore. These refreshments, indeed, for want's which they were languishing to death, were as effectuall beyond their reach, as if there had been half the circum ference of the world between them; yet their being i fight, was no inconsiderable increase of the distress which they suffered by the want of them. Their situation in i felf indeed was no worse than it would have been if thed stacle to their wishes had been distance, and not a reef rocks; and both being alike insuperable, a Being wholl under the influence of reason, would, by both, have be equally affected; but this is a fituation, among many thers, that may be remarked by a diligent observer, which reason cannot preserve mankind from the pow which fancy is perpetually exerting to aggravate the cal mities of life. When I knew the foundings, I could no forbear standing close round the island with the shi though I also knew it was impossible to procure any the refreshments which it produced. The natives ran long the shore abreast of the ship, shouting and dancing they also frequently brandished their long spears, and the threw themselves backward, and lay a few minutes motion less, as if they had been dead: this we understood as a'm nace that they would kill us, if we ventured to go on fhor As we were failing along the coaft, we took notice that one place the natives had fixed upright in the fand to spears, to the top of which they had fastened several thing that fluttered in the air, and that some of them were en moment kneeling down before them, as we supposed, i voking the affiftance of some invisible Being to defer them against us. While I was thus circumnavigating the island with the ship, I sent the boats out again to soun and when they came near the shore, the Indians set up of of the most hideous yells I had ever heard, pointing at the same time to their spears, and poising in their hands land stones which they took up from the beach. Our men the contrary made all the figns of amity and good-w

hat they could devise, and at the same time threw them read and many other things, none of which they vouchfaled so much as to touch, but with great expedition hauled five or fix large canoes, which we faw lying upon the beach, into the wood. When this was done, they waded into the water, and feemed to watch for an opportunity of laying hold of the boat, that they might drag her on shore : he people on board her, apprehending that this was their cun delign, and that if they got them on shore they would certainly put them to death, were very impatient to be beforehand with them, and would fain have fired upon them; but the officer on board, having no permission from me to commit any hostilities, restrained them. I should indeed have thought myself at liberty to have obtained by force the refreshments, for want of which our people were dybee ing, if it had been possible to have come to an anchor, supny poling we could not have made these poor savages our er, i friends; but nothing could justify the taking away their lives for a mere imaginary or intentional injury, without procuring the least advantage to ourselves. They were of deep copper colour, exceedingly flout and well-limbed, this and remarkably nimble and active, for I never saw men ny run so fast in my life. This island lies in latitude 14° 5° S., longitude 145° 4' W. from the meridian of London. As the boats reported a second time that there was no anthe choring ground about this island, I determined to work up to the other, which was accordingly done all the rest of a'm the day and the following night

hon At fix o'clock in the morning, Sunday 8. we brought nation to on the west side of it, at the distance of about three to quarters of a mile from the shore, but we had no soundings with one hundred and forty fathom of line. We now perceived several other low islands, or rather peninsulas, most of them being joined one to the other by a neck of land, very narrow, and almost level with the furface of the water, which breaks high over it. In approaching these illands the cocoa-nut trees are first discovered, as they are higher than any part of the surface. I sent a boat with an officer from each ship to sound the lee-side of these islands for an anchoring-place; and as soon as they left the ship, I faw the Indians run down to the beach in great numbers, armed with long spears and clubs; they kept a-

breast of the boats as they went sounding along the shore, and used many threatening gestures to prevent their landing. I therefore fired a nine pound shot from the ship over their heads, upon which they ran into the woods with great precipitation. At ten o'clock the boats returned, but could get no soundings close in with the surf, which broke very high upon the shore. The middle of this cluster of islands lies in latitude 14° 10′ S., longitude 144° 52′ W.; the variation of the compass was here 4° 30′ E.

At half an hour after ten, we bore away and made fall to the westward, sinding it impossible to procure at these islands any refreshment for our sick, whose situation was becoming more deplorable every hour, and I therefore

called them the ISLANDS OF DISAPPOINTMENT.

#### CHAP. IX.

The Discovery of King George's Islands, with a Description of them, and an Account of several incidents that happened there.

A T half an hour after five o'clock in the afternoon, Sunday o. we saw land again, bearing W. S. W. at the distance of fix or seven leagues; and at seven we brought to for the night. In the morning, being within three miles of the shore, we discovered it to be a long low island with a white beach, of a pleasant appearance, full of co coa-nut and other trees, and surrounded with a rock of me coral. We flood along the north east-fide of it, within ha a mile of the shore; and the savages, as soon as they la us, made great fires, as we supposed, to alarm the distant inhabitants of the island, and ran along the beach, abrea of the ship, in great numbers, armed in the same manne as the natives of the Islands of Disappointment. Overthe land on this fide of the island we could see a large lake of falt water, or lagoon, which appeared to be two or three leagues wide, and to reach within a small distance of the opposite shore. Into this lagoon we saw a small inlet bout a league from the fouth-west point, off which w brought to. At this place the natives have built a little town, under the shade of a fine grove of cocoa-nut tree I immediately fent off the boats, with an officer in each to found nd-

found; but they could find no anchorage, the shore being every where as steep as a wall, except at the very mouth of the inlet, which was scarcely a ship's length wide, and there they had thirteen fathom, with a bottom of coral rock. We stood close in with the ships, and saw hundreds of the savages, ranged in very good order, and standing up to their waists in water; they were all armed in the same manner as those that we had seen at the other flands, and one of them carried a piece of mat fattened to the top of a pole, which we imagined was an enfign. They made a most hideous and incessant noise, and in a short ime many large canoes came down the lake to join them. Our boats were still out, and the people on board them made all the figns of friendship that they could invent, uon which some of the cances came through the inlet and drew near them. We now began to hope that a friendly ntercourse might be established; but we soon discovered hat the Indians had no other defign than to haul the boats on shore: many of them leaped off the rocks, and wam to them; and one of them got into that which beonged to the Tamar, and in the twinkling of an eye feizda seaman's jacket, and jumping over board with it, neer once appeared above water till he was close in shore among his companions. Another of them got hold of a midshipman's hat, but not knowing how to take it off, he pulled it downward instead of lifting it up; so that the wner had time to prevent its being taken away, otherwise twould probably have disappeared as suddenly as the jactet; our men bore all this with much patience, and the milians seemed to triumph in their impunity.

About noon, finding there was no anchorage here, I ore away and steered along the shore to the westermost oint of the island: the boats immediately followed us, and tept sounding close to the beach, but could get no ground. When we came to the westermost point of this island, we saw another, bearing S. W. by W. about sour leagues islant. We were at this time about a league beyond the let where we had left the natives, but they were not saissed with having got rid of us quietly; for I now pertived two large double canoes sailing after the ship, with bout thirty men in each, all armed after the manner of sheir country. The boats were a good way to leeward of

K 3

us,

ack

tha

103

6302

ns, and the canoes passing between the ship and the short hele feemed very eagerly to give them chace. Upon this be c made the fignal for the boats to speak with the a A noes, and as foon as they perceived it, they turned, an erec his made towards the Indians, who feeing this, were seize with a fudden panic, and immediately hauling down the fails, paddled back again at a surprising rate. Our boat would however came up with them; but notwithstanding the I dreadful furf that broke upon the shore, the canoes pushe tely through it, and the Indians immediately hauled them a rme upon the beach. Our boats followed them, and the Ind ans, dreading an invation of their coast, prepared to defen blen it with clubs and stones, upon which our men fired, an oint killed two or three of them: one of them received three ad t balls which went quite through his body; yet he after er of wards took up a large stone, and died in the action choug throwing it against his enemy. This man fell close to or hat t boats, so that the Indians who remained unhurt did no cople dare to attempt the carrying off his body, which gave a feet an opportunity to examine it; but they carried off the Jul reft of their dead, and made the best of their way back to a their companions at the inlets. Our boats then returne of the and brought off the two canoes which they had purfue in a One of them was thirty-two feet long, and the other some and a what less, but they were both of a very curious construct. on, and must have cost those who made them infinit fres labour. They confifted of planks exceedingly will the wrought, and in many places adorned with carving; the hold planks were fewed together, and over every feam there w w a stripe of tortoise shell, very artificially fastened, to ke stally out the weather: their bottoms were as sharp as a wedge at h and they were very narrow; and therefore two of the med were joined laterally together by a couple of strong spatish of to that there was a space of about fix or eight feet be mate tween them: a mast was hoisted in each of them, and there is ferved, and which is now in my possession, is made of me em ting, and is as neat a piece of work as ever I faw: the od, paddles were very curious, and their cordage was as go at I and as well laid as any in England, though it appeared there be made of the outer covering of the cocoa-nut. Whe med To Emprey at the Love a recover of the first the

hese vessels sail, several men sit upon the spars which hold he canoes together.

As the furf which broke very high upon the shore renan ered it impossible to procure refreshments for the fick in the ack to the inlet, being determined to try once more what

ould be done there.

his

boat

I recovered that station in the afternoon, and immediushe tely fent the boats to found the inlet again, but they conm n med the account which had been made before, that it Ind forded no anchorage for a ship. While the boats were defen blent, I observed a great number of the natives upon the , an soint near the spot where we had left them in the morning, thre and they seemed to be very busy in loading a great numafter er of large canoes which lay close to the beach. As I son a hought they might be troublesome, and was unwilling to or that they should suffer by another unequal contest with our d no cople, I fired a shot over their heads which produced the aver feet I intended, for they all disappeared in a moment.

Off the Just before the evening closed in, our boats landed, and

ack to a few cocoa-nuts which they brough off, but faw none turne of the inhabitants. In the night, during which we had urfue in and hard fqual's, I flood off and on with the ships, r some and at seven o'clock in the morning brought to off the in-

struct. I immediately sent boats on the shore in search infini fresreshments, and made all the men who were not so ill y with the scurvy as to be laid up, go in them; I also went ; the hore myself, and continued there the whole day. We ere w many houses or wigwams of the natives, but they were to ke stally deserted, except by the dogs, who kept an inceswedge at howling from the time we came on shore till we reof the med to the ship: they were low mean hovels, thatched g spa ith cocoa nut branches; but they were most delightfully feet bonated in a fine grove of stately trees, many of which and there the cocoa-nut, and many fuch as we were utterly un-I proquainted with. The cocoa-nut trees feem to furnish of me with almost all the necessaries of life; particularly : the od, fails, cordage, timber, and veffels to hold water; fo as go at probably these people always fix their habitations eared here the trees abound. We observed the shore to be co-Whered with coral, and the shells of very large pearl oysters; the that I make no doubt but that as profitable a pearl fishbut little of the people, except at a distance; we could however perceive that the women had a piece of cloth of some kind, probably fabricated of the same stuff as their sail, hanging from the waist as low as the knee; the men were naked.

Our people, in rummaging some of the huts, found the carved head of a rudder, which had manifestly belonged to a Dutch long boat, and was very old and worm eaten. They found also a piece of hammered iron, a piece of brass and some iron tools, which the ancestors of the present in habitants of this place probably obtained from the Dutch ship to which the long boat had belonged, all which I brought away with me. Whether these people found means to cut off the ship, or whether she was lost upon the island or after she left it, cannot be known; but there is reason to believe that she never returned to Europe, be cause no account of her voyage, or of any discoveries that she made, is extant. If the ship failed from this place in fafety, it is not perhaps easy to account for her leaving the rudder of her long boat behind her: and if the was cut of by the natives, there must be much more considerable remains of her in the island, especially of her iron-work, w pon which all Indian nations, who have no metal, set the highest value; we had no opportunities however to exa mine this matter farther. The hammered iron, brass, and iron tools, I brought away with me; but we found a too exactly in the form of a carpenter's adze, the blade of which was a pearl oyster shell; possibly this might have been made in imitation of an adze which had belonged to the carpenter of the Dutch ship, for among the tools that I brought away there was one which feemed to be the re mains of fuch an implement, though it was worn away al most to nothing.

Close to the houses of these people, we saw buildings of another kind, which appeared to be burying places, and from which we judged that they had great veneration for their dead. They were situated under losty trees, that gave a thick shade; the sides and tops were of stone; and in their sigure they somewhat resembled the square tombs with a slat top, which are always to be sound in our country church-yards. Near these buildings we found many

eat boxes full of human bones, and upon the branches of he trees which shaded them, hung a great number of the eads and bones of turtle, and a variety of fish, inclosed a kind of basket-work of reeds: some of the fish we ook down, and found that nothing remained but the skin nd the teeth; the bones and entrails seemed to have been tracted, and the muscular flesh dried away.

We sent off several boat-loads of cocoa nuts, and a great nantity of scurvy-grass, with which the island is covered; freshments which were of infinite service to us, as by this me I believe there was not a man among us wholly un-

suched by the scurvy.

The fresh water here is very good, but it is scarce; the ells which supply the natives are so small, that when two three cocoa-nut shells have been filled from them, they edry for a few minutes; but as they presently fill again, a little pains were taken to enlarge them, they would

andantly supply any ship with water.

We saw no venomous creature here; but the flies were n intolerable torment, they covered us from head to foot, d filled not only the boat, but the ships. We saw great umbers of parrots and paroquets, and several other birds hich were altogether unknown to us; we saw also a beauful kind of dove, so tame that some of them frequently me close to us, and even followed us into the Indian

All this day the natives kept themselves closely concealle of and did not even make a smoke upon any part of the have lands as far as we could see; probably fearing that a d to make might discover the place of their retreat. In the

rening, we all returned on board the ship.

This part of the island lies in latitude 14° 29' S., longide 148° 50' W. and after I got on board, I hauled a tle way farther from the shore, intending to visit the her island in the morning, which had been seen to the thward of that before which the ship lay, and which is flant about fixty-nine leagues from the Islands of Disapbintment, in the direction of W. + S.

The next morning, Wednesday 12. at fix o'clock, I ade sail for the island which I intended to visit, and when reached it, I steered S. W. by W. close along the north-It lide of it, but could get no foundings: this fide is a-

bout.

bout fix or feven leagues long, and the whole makes much the same appearance as the other, having a large falt wa ter lake in the middle of it. As foon as the ship came in fight, the natives ran down to the beach in great numbers they were armed in the fame manner as those that we had feen upon the other island, and kept abreast of the ship so feveral leagues. As the heat of this climate is very great they seemed to suffer much by running so far in the sun for they sometimes plunged into the sea, and sometime fell flat upon the fand, that the furf might break over them after which they renewed the race with great vigour. On boats were at this time founding along the shore, as usus but I had given frict orders to the officers who command ed them never to molest the natives, except it should be come absolutely necessary for their own defence, but to the all possible means to obtain their confidence and good-will our people therefore went as near to the shore as they dur for the furf, and made figns that they wanted water; the Indians readily understood them, and directed them to m down farther along the shore, which they did, till the came abreaft of such a cluster of houses as we had just left pon the other island: to this place the Indians still follow ed them, and were there joined by many others: the box immediately hauled close into the surf, and we brough to, with the ships, at a little distance from the shor upon which a stout old man, with a long white beard, the gave him a venerable appearance, came down from t houses to the beach. He was attended by a young ma and appeared to have the authority of a Chief or King terco the rest of the Indians, at a signal which he made, retin to a little distance, and he then advanced quite to the ter's edge; in one hand he held the green branch of a tr and in the other he grasped his beard, which he pressed his bosom; in this attitude he made a long oration or rath fong, for it had a musical cadence which was by no me disagreeable. We regretted infinitely that we could t understand what he said to us, and not less that he cou not understand any thing which we should say to him; shew our good-will, however, we threw him some trisli presents, while he was yet speaking, but he would neit touch them himself, nor suffer them to be touched by oth till he had done: he then walked into the water, and the

r people the green branch, after which he took up the ings which had been thrown from the boats. Every ing now having a friendly appearance, our people made ons that they should lay down their arms, and most of em having complied, one of the midshipmen, encouraged this testimony of considence and friendship leaped out of e boat with his clothes on, and swam through the surf shore. The Indians immediately gathered round him, d began to examine his clothes with great curiofity; they emed particularly to admire his waiftcoat, and being wilng to gratify his new friends, he took it off, and presentit to them; this courtefy, however, produced a disareable effect, for he had no sooner given away his waistat, than one of the Indians very ingeniously untied his to tr avat, and the next moment inatched it from his neck, d ran away with it Our adventurer, therefore, to preat his being thripped by piece-meal, made the best of his ay back again to the boat: still, however, we were upon to To od terms, and several of the Indians swam off to our tople, some of them bringing a cocoa-nut, and others a lefte tile fresh water in a cocoa-nut shell. But the principal ollor bject of our boats, was to obtain fome pearls; and the box en, to affift them in explaining their meaning, had taken ough the them some of the pearl oyster shells which they had shor sound in great numbers upon the coast; but all their enthe avours were ineffectual, for they could not, even with m il sis assistance, at all make themselves understood. ma deed probable that we should have succeeded better if an King tercourse of any kind could have been established between reting to but it was our misfortune that no anchorage could be her and for the ships. As all Indians are fond of beads, it atm in scarcely be supposed that the pearls, which the oysters fled this place contained, were overlooked by the natives, rath ad it is more than probable that if we could have conti-med the ded here a few weeks, we might have obtained some of ild reat value in exchange for nails, hatchets, and bill-hooks, con pon which the natives, with more reason, set a much im; gher value. We observed, that in the lake, or lagoon, triffi ere were two or three very large vessels, one of which neith id two masts, and some cordage alost to support them.
To these two islands, I gave the name of King George's the LANDS, in honour of his Majesty. That which we last vifited

visited, lies in latitude 14° 41' S., longitude 149° 15' W. the variation of the compass here was 5° E.

## CHAP X.

The Run from King George's Islands to the Islands of Say pan, Tinian, and Aguigan; with an Account of several Islands that were discovered in that Track.

WE pursued our course to the westward the same day and the next, Thursday 13. about three o'clock the afternoon, we saw land again, bearing S. S. W. dil tant about fix leagues. We immediately stood for it, and found it to be a low and very narrow island, lying east an west: we ran along the south side of it, which had a gree and pleasant appearance, but a dreadful surf breaks upor every part of it, with foul ground at some distance, an many rocks and small islands scattered about three league from the shore. We found it about twenty leagues i length, and it appeared to abound with inhahitants, the we could get only a transient glance of them as we passe along. To this place I gave the name of the PRINCE of WALES'S ISLAND. It lies in latitude 150 S. and the westermost end of its longitude 151° 53' W. It is distant from King George's Islands about eight and forty league in the direction of S. 80° W.; the variation here was 30' E.

From the western extremity of this island, we steered \$2° W. and at noon, Sunday 16. were in latitude 14° 18 S., longitude 156° 23' W.; the variation being 7° 40' I. The wind was now easterly, and we had again the same mountainous swell from the southward that we had been we made the Islands of Direction, and which, from the time to this day we had lost: when we lost that swell, as for some days before, we saw vast slocks of birds, who we observed always took their slight to the southwar when evening was coming on. These appearances persu ded me that there was land in the same direction, and am of opinion, that if the winds had not sailed me in the higher latitudes, I should have fallen in with it: I would indeed at this time have hauled away to the southward

The next day, Monday 17. we again saw many birds frarious forts about the ship, and therefore supposed that me other island was not far distant, for the swell contiuing, I concluded that the land was not of very great exnt: I proceeded, however, with caution, for the islands this part of the ocean render the navigation very dangeous, they being so low, that a ship may be close in with em before they are seen. We saw nothing, however, on nesday 18. Wednesday 19. nor Thursday 20. during hich we continued to steer the same course, though the irds still continued about the vessel in great numbers. Our titude was now 12° 33' S., longitude 167° 47' W. The rince of Wales's Island was distant three hundred and inteen leagues, and the variation of the needle was 90 E. The next morning about seven o'clock, Friday 21. ediscovered a most dangerous reef of breakers, bearing S. W. and not farther diffant than a fingle league. In bout half an hour afterwards, land was feen from the aft head, bearing W. N. W. and distant about eight agues: it had the appearance of three islands, with rocks d broken ground between them. The fouth-east side these islands lies N. E. by N. and S. W. by S. and is out three leagues in length between the extreme points, om both which a reef runs out, upon which the fea eaks to a tremenduous height. We failed round the north id, and upon the north-west and west side, saw innumeble rocks and shoals, which stretched near two leagues to the sea, and were extremely dangerous. The islands emselves had a more fertile and beautiful appearance than y we had seen before, and, like the rest, swarmed with eple, whose habitations we saw standing in clusters all and in th ong the coast. We saw also a large vessel under sail, at little distance from the shore; but to our unspeakable re-WOU et we were obliged to leave the place without farther exnination, for it was surrounded in every direction by Vol. I. rocks

The reef of rocks which we first saw as we approache these islands, lies in latitude 10° 15' S., longitude 169 28' W. and it bears from Prince of Wales's Island N. 76 48' W. distant 35'2 leagues. The islands bear from the reef W. N. W. distant nine leagues: I called them the Islands of Danger, and steered from them N. W. by W.

allowing for the variation.

After having seen the breakers soon after it was lighting the morning, I told my officers that I apprehended a should have frequent alarms in the night; at night, then fore, every body was upon the watch, which a very have squall of wind, with rain, rendered the more necessary About nine o'clock, having just gone down into my calbin, I heard a great noise above, and when I inquite what was the matter, I was told that the Tamar, who we ahead, had fired a gun, and that our people saw breake to leeward: I ran instantly upon the deck, and soon precived that what had been taken for breakers was nothing more than the undulating restection of the moon, which was going down, and shone faintly from behind a cloud in the horizon; we therefore bore away after the Tama but did not get sight of her till an hour afterwards.

Nothing worthy of notice happened till Monday a when, about ten o'clock in the morning, we discovered nother island, bearing S. S. W. distant about seven of eight leagues: we steered for it, and found it to be low but covered with wood, among which were cocoa-nut tree in great abundance. It had a pleasant appearance, and large lake in the middle, like King George's Island: it near thirty miles in circumference, a dreadful sea break upon almost every part of the coast, and a great deal of foul ground lies about it. We sailed quite round it, and when we were on the lee-side, sent out boats to sound, hopes of finding anchorage: no soundings, however, we to be got near the shore, but I sent the boats a secont time, with orders to land, if it were possible, and procur some refreshments for the sick: they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is they landed with great discount to the sick is the sick i

culty, and brought off about two hundred cocoa-nuts, shich to persons in our circumstances, were an inestimable reasure. The people who were on shore, reported that here were no figns of its having ever been inhabited, but hat they found thousands of sea fowl sitting upon their ells, which were built in high trees: these birds were so ame that they suffered themselves to be knocked down ithout leaving their nests: the ground was covered with nd crabs, but our people saw no other animal. At first was inclined to believe that this island was the same that the Neptune Francois is called Maluita, and laid down bout a degree to the eastward of the great island of Saint lizabeth, which is the principal of the Solomon's sands; but being afterwards convinced to the contrary, called it the DUKE OF YORK'S ISLAND, in honour of his loyal Highness, and I am of opinion that we were the first uman beings who ever faw it. There is indeed great reaon to believe that there is no good authority for laying own Solomon's Islands in the situation that is assigned to hem by the French: the only person who has pretended have seen them is Quiros, and I doubt whether he left thind him any account of them by which they might be ound by future navigators.

We continued our course till Saturday 29. in the track of hele islands, and being then ten degrees to the westward of heir situation in the chart, without having seen any thing sthem, I hauled to the northward, in order to cross the quinoxial, and atterwards shape my course for the Ladrone slands, which, though a long run, I hoped to accomplish a sore I should be distressed for water, notwithstanding it ow began to fall short. Our latitude, this day, was 8° 3'S., longitude 176° 20' E. and the variation was 10° 3'S., longitude 176° 20' E. and the variation was 10° 3'S.

which the sea broke with a dreadful surf. We steered a. long the fouth-well fide of it, which we judged to be a. bout four leagues in length, and foon perceived not only that it was inhabited, but very populous; for prefently af. ter the ship came in fight, we saw at least a thousand of the natives affembled upon the beach, and in a very short time more than fixty canoes, or rather proas, put off from the shore, and made towards us. We lay by to receive them, and they were very foon ranged in a circle round us. Thefe vessels were very neatly made, and so clean that they ap. peared to be quite new: none of them had fewer than three persons on board, nor any of them more than six. After these Indians had gazed at us some time, one of them suddenly jumped out of his proa, swam to the ship, and ma up the fide like a cat: as foon as he had stepped over the gunwale, he fat down upon it, and burst into a violent st of laughter, then started up, and ran all over the ship, attempting to steal whatever he could lay his hands upon but without success, for being stark naked, it was impossible to conceal his booty for a moment. Our seamen put on him a jacket and trowsers, which produced great merriment, for he had all the gestures of a monkey newly diel fed: we also gave him bread, which he eat with a voracious appetite, and after having played a thousand antitricks, he leaped overboard, jacket and trowfers and all and Iwam back again to his proa; after this feveral other fwam to the ship, ran up the side of the gun-room ports and having crept in, inatched up whatever lay in their reach, and immediately leaped again into the sea, and swam away at a great rate, though some of them, having both hands full, held up their arms quite out of the water, to prevent their plunder from being spoiled. These people are tall, well proportioned, and clean limbed: their skin is a bright copper colour, their features are extremely good and there is a mixture of intrepidity and cheerfulnels in their countenances that is very striking. They have long black hair, which some of them wore tied up behind in great bunch, others in three knots: some of them had long beards, some only whiskers, and some nothing more than a small tuft at the point of the chin. They were a of them stark naked, except their ornaments, which confifted of shells, very prettily disposed and strung together g.

nd were worn round their necks, wrists, and waists: all heir ears were bored, but they had no ornaments in them hen we faw them: fuch ornaments as they wear, when bey wear any, are probably very heavy, for their ears ang down almost to their shoulders, and some of them ere quite split through. One of these men, who appearto be a person of some consequence, had a string of uman teeth about his waist, which was probably a troby of his military prowefs, for he would not part with it exchange for any thing that I could offer him. Some them were unarmed, but others had one of the most ingerous weapons I had ever feen: it was a kind of spear. ry broad at the end, and fluck full of shark's teeth, hich are as fharp as a lancet, at the sides, for about three et of its length. We shewed them some cocoa-nuts, and ade figns that we wanted more; but instead of giving y intimation that they could supply us, they endeavourto take away those we had.

I sent out the boats to sound soon after we brought to off eisland, and when they came back, they reported that ere was ground at the depth of thirty fathom, wintwo cable's length of the shore; but as the bottom as coral rock, and the soundings much too near the breams for a ship to lie in safety, I was obliged again to make I without procuring any refreshments for the sick. This and, to which my officers gave the name of Byron's tand, lies in latitude 1° 18'S., longitude 173° 46' E. e variation of the compass here, was one point E.

In our course from this place, we saw, for several days, and ance of sish, but we could take only sharks, which we become a good dish even at my own table. Many the people now began to fall down with sluxes, sich the Surgeon imputed to the excessive heat, and aloft perpetual rains.

By Sunday 21. all our cocoa-nuts being expended, our ople began to fall down with the scurvy. The effect of the nuts alone, in checking this disease, is assonishing any whose limbs were become as black as ink, who could move without the assistance of two men, and who, been total debility, suffered excruciating pain, were in a stay, by eating these nuts, although at sea, so far retered as to do their duty, and could even go aloft as

T 3

well

well as they did before the distemper seized them. For several days about this time, we had only faint breezes, with smooth water, so that we made but little way, and as we were now not far from the Ladrone Islands, where we hoped some refreshments might be procured, we most ardently wished for a fresh gale, especially as the heat was still intolerable, the glass for a long time having never been lower than eighty one, but often up to eighty four; and I am of opinion that this is the hottest, the longest, and most dangerous run that ever was made.

On the 18th, we were in latitude 13° 9' N., longitude 158° 50' E., and on Monday 22. in latitude 14° 25' N. longitude 153° 11' E. during which time we had a northerly current. Being now nearly in the latitude of Tinian,

I shaped my course for that island.

#### CHAP XI.

The Arrival of the Dolphin and Tamar at Tinian, a Def cription of the present Condition of that Island, and a Account of the Transactions there.

ON Sunday 28. we saw a great number of birds about the ship, which continued till Tuesday 30. when about two o'clock in the afternoon we saw land, bearing W. N. which proved to be the islands Saypan, Tinian, and Aiguigan. At sun-set, the extremes of them bore from N W. . N. westward to S. W.; and the three islands ha the appearance of one. At seven, we hauled the wind these and flood off and on all night; and at fix the next morning the excremes of the islands, which still made in one, bor from N. W. by N. to S. W. by S. distant five league The east side of these islands lies N. E. by N. and S. W. by Saypan is the northermost; and from the north-east poil of that island to the fouth west point of Aiguigan, the stance is about seventeen leagues. These three islands a between two and three leagues distant from each other Saypan is the largest, and Aiguigan, which is high a round, the smallest. We steered along the east side them, and at noon hauled round the fouth point of Tin an, between that island and Aiguigan, and anchored

the fouth-west end of it, in sixteen fathom water, with a bottom of hard fand and coral rock, opposite to a white andy bay, about a mile and a quarter from the shore, and bout three quarters of a mile from a reef of rocks that lies at a good distance from the shore, in the very spot where Lord Anson lay in the Centurion. The water at this place is fo very clear that the bottom is plainly to be feen at the depth of four and twenty fathom, which is no less

than one hundred and forty-four feet.

As soon as the ship was secured, I went on shore to fix upon a place where tents might be erected for the fick, which were now very numerous; not a fingle man being wholly free from the scurvy, and many in the last stage of t. We found several huts which had been left by the Spaniards and Indians the year before; for this year none of them had as yet been at the place, nor was it probable that they should come for some months, the sun being now almost vertical, and the rainy season set in. After I had fixed upon a spot for the tents, six or seven of us endeayoured to push through the woods, that we might come at the beautiful lawns and meadows of which there is fo inxuriant a description in the Account of Lord Anson's Voyage, and if possible kill some cattle. The trees stood so thick, and the place was so overgrown with underwood, that we could not see three yards before us, we therefore were obliged to keep continually hallooing to each other, , and to prevent our being separately lost in this trackless wilom No derness. As the weather was intolerably hot, we had no-Is ha thing on besides our shoes, except our shirts and trowsers, and wind these were in a very short time torn all to rags by the bushes rning and brambles; at last, however, with incredible difficulty and labour, we got through; but, to our great surprise and disappointment, we found the country very different from the account we had read of it: the lands were entirey overgrown with a stubborn kind of reed or brush, in many places higher than our heads, and no where lower than our middles, which continually entangled our legs, and cut us like whipcord; our stockings perhaps might ave suffered still more, but we wore none. During this march we were also covered with flies from head to foot, and whenever we offered to speak we were sure of having mouthful, many of which never failed to get down our throats. After we had walked about three or four miles, we got fight of a bull, which we killed, and a little before night got back to the beach, as wet as if we had been dipt in water, and so fatigued that we were scarcely able to stand. We immediately sent out a party to setch the bull, and found that during our excursion some tents had been

got up, and the fick brought on shore.

The next day, Thursday, August 1. our people were employed in fetting up more tents, getting the water calks on shore, and clearing the well at which they were to be filled. This well I imagined to be the same that the Cen. turion watered at; but it was the worst that we had met with during the voyage, for the water was not only brakil, but full of worms. The Road also where the ships lay was a dangerous situation at this season, for the bottom is hard fand and large coral rocks, and the anchor having no hold in the fand, the cable is in perpetual danger of being cut to pieces by the coral; to prevent which as much as poffible, I rounded the cables, and buoyed them up with empty water-casks. Another precaution also was taught me by experience, for at first I moored, but finding the cables much damaged. I resolved to lie single for the future, that by veering away or heaving in, as we should have more or less wind, we might always keep them from being slack, and consequently from rubbing, and this expedient such ceeded to my wish. At the full and change of the moon, a prodigious swell tumbles in here, so that I never saw thips at anchor roll fo much as ours did while we lay here; and it once drove in from the westward with such violence, and broke to high upon the reef, that I was obliged to put to fea for a week; for if our cable had parted in the night, and the wind had been upon the shore, which some times happens for two or three days together, the ship mult inevitably have been loft upon the rocks.

As I was myself very ill with the scurvy, I ordered a tent to be pitched for me, and took up my residence of shore; where we also erected the armourer's sorge, and began to repair the iron-work of both the ships. I som found that the island produced limes, sour oranges, cocoanuts, bread-fruit, guavas, and paupaus in great abundance;

<sup>\*</sup> See a particular description of the bread-fruit, in the 8th chapter of Lieut. Cook's Voyage.

ance; but we found no water-melons, scurvy-grass, or

Notwithstanding the fatigue and distress that we had enured, and the various climates we had passed through, either of the ships had yet lost a single man since their iling from England; but while we lay here two died of vers, a disease with which many were seized, though we recovered very fast from the scurvy. I am indeed of pinion that this is one of the most unhealthy spots in the orld, at least during the season in which we were here. he rains were violent, and almost incessant, and the heat as so great as to threaten us with suffocation. The therometer, which was kept on board the ship, generally ood at eighty-fix, which is but nine degrees less than the eat of the blood at the heart; and if it had been on shore would have risen much higher. I had been upon the oast of Guinea, in the West-Indies, and upon the island Saint Thomas, which is under the Line, but I had neer felt any fuch heat as I felt here. Besides the inconveience which we suffered from the weather, we were inessantly tormented by the flies in the day, and by the infquitos in the night. The island also swarms with cenpedes and scorpions, and a large black ant, scarcely innior to either in the malignity of its bite. Besides these, ere were venomous insects without number, altogether aknown to us, by which many of us fuffered so severely, at we were afraid to lie down in our beds; nor were tole on board in a much better situation than those on ore, for great numbers of these creatures being carried to the ship with the wood, they took possession of every rth, and left the poor seamen no place of rest either bew or upon the deck.

As soon as we were settled in our new habitations, I not out parties to discover the haunts of the cattle, some which were sound but at a great distance from the tents, of the beasts were so shy that it was very difficult to get a otat them. Some of the parties which, when their haunts id been discovered, were sent out to kill them, were sent three days and nights before they could succeed; if when a bullock had been dragged seven or eight miles rough such woods and lawns as have just been described, the tents, it was generally sull of sty-blows, and stunk

fo as to be unfit for use: nor was this the worst, for the fatigue of the men in bringing down the carcale, and the intolerable heat they suffered from the climate and the bour, frequently brought on fevers which laid them u Poultry however we procured upon easier terms: there w great plenty of birds, and they were easily killed; but the flesh of the best of them was very ill tasted, and such w the heat of the climate that within an hour after they were killed it was as green as grass, and fwarmed with maggot Our principal resource for fresh meat, was the wild how with which the island abounds. These creatures are ver fierce, and some of them so large that a carcase frequent weighed two hundred pounds. We killed them without much difficulty, but a Black belonging to the l'amar con trived a method to snare them, so that we took great num bers of them alive. which was an unspeakable advantage for it not only enfured our eating the flesh while it w fweet, but enabled us to fend a good number of them board as fea-stores.

In the mean time we were very desirous of procurin some beef in an eatable state, with less risk and labour, and Mr Gore, one of our mates, at last, discovered a pleasa fpot upon the north west part of the island, where can were in great plenty, and whence they might be brough to the tents by sea. To this place therefore I dispatched party, with a tent for their accommodation, and fent the boats every day to fetch what they should kill; sometim however there broke fuch a fea upon the rocks that it w impossible to approach them, and the Tamar's boat unha pily lost three of her best men by actempting it. We've now, upon the whole, pretty well supplied with provision especially as we baked fresh bread every day for the sick and the fatigue of our people being less, there were few ill with the fever: but several of them were so much diff dered by eating of a very fine looking fish which we caug here, that their recovery was for a long time doubtle The Author of the Account of Lord Anson's Voyage lay that the people on board the Centurion thought it prude to abstain from fish, as the few which they caught at the first arrival surfeited those who eat of them. tending fufficiently to this caution, and too hallily take the word surfeit in its literal and common acceptation, imagio r th

agined that those who tasted the fish when Lord Anson streams hither, were made sick merely by eating too uch: whereas, if that had been the case, there would be been no reason for totally abstaining afterwards, but sty eating temperately. We however bought our knowing by experience, which we might have had cheaper; though all our people who tasted this fish, eat sparingly, ey were all soon afterwards dangerously ill.

ey were all foon afterwards dangeroufly ill. Besides the fruit that has been mentioned already, this and produces cotton and indigo in abundance, and would tainly be of great value if it was fituated in the Westdies. The furgeon of the Tamar enclosed a large spot ground here, and made a very pretty garden; but we Inot stay long enough to derive any advantage from it. While we lay here, I fent the Tamar to examine the and of Saypan, which is much larger than Tinian, rifes ther, and, in my opinion, has a much pleasanter appearce. She anchored to the leeward of it, at the distance amile from the shore, and in about ten fathom water, th much the same kind of ground as we had in the road Tinian. Her people landed upon a fine sandy beach ich is six or seven miles long, and walked up into the ods, where they faw many trees which were very fit for masts. They saw no fowls, nor any tracks of cattle; tof hogs and guanicoes there was plenty. They found fresh water near the beach, but saw a large pond inland, ich they did not examine. They saw large heaps of al oyster-shells thrown up together, and other signs of ple having been there not long before: possibly the aniards may go thither at some seasons of the year, and ry on a pearl fishery. They also saw many of those are pyramidal pillars which are to be found at Tinian, which are particularly described in the Account of rd Anson's Voyage.

On Monday the 30th of September, having now been enine weeks, and our fick being pretty well recovered, redered the tents to be struck, and with the forge and n carried back to the ship; I also laid in about two usand cocoa-nuts, which I had experienced to be so verful a remedy for the scurvy, and the next day, esday, October 1. I weighed, hoping that before we ald get the length of the Bashe Islands, the N. E. mon-

foon

foon would be set in. I stood along the shore to take in the beef-hunters; but we had very little wind this day and the next, Wednesday 2. till the evening, when it came to the westward and blew fresh: I then stood to the north ward till the morning, Thursday 3. when we made Anata can, an island that is remarkably high, and the same the was first fallen in with by Lord Anson.

#### CHAP XII.

The Run from Tinian to Pulo Timoan, with some Account of that Island, its Inhabitants and Productions, and the to Batavia.

WE continued our course till Thursday 10. when being in latitude 10° 33' N., longitude 136° 50' E. a found the ship two and twenty miles to the south-ward of her account, which must have been the effect of a strong current in that direction. The variation here was 5° 10 E., and for some time we found it regularly decreasing, that on the 19th, being in latitude 21° 10' N., longitude

124° 17' E., the needle pointed due north.

On Friday 18. We had found the ship eighteen miles the northward of her account, and faw feveral land bin about the ship, which appeared to be very much tired: caught one as it was resting upon the booms, and found very remarkable. It was about as big as a goose, and over as white as fnow, except the legs and beak white were black; the beak was curved, and of so great a leng and thickness, that it is not easy to conceive how t muscles of the neck, which was about a foot long and fmall as that of a crane, could support it. We kept about four months upon biscuit and water, but it then die apparently for want of nourishment, being almost as lig as a bladder. It was very different from every species the Toucan that is represented by Edwards, and I belie has never been described. These birds appeared to ha been blown off some island to the northward of us, that not laid down in the charts.

The needle continued to point due north till Tuesday? when, at six o'clock in the morning, Grafton's Island, t

On Thursday 24. being in latitude 16° 59' N., longide 113° 1' E., we kept a good look out for the Trianes, which lie without the north end of the Prasil, and m a most dangerous shoal. On Wednesday 30. we saw veral trees and large bamboos floating about the ship, and on founding had three and twenty fathom, with dark own fand, and small pieces of shells: Our latitude was w 7° 17' N., longitude 104° 21' E.; the variation was W. The next day, Thursday 31. we found the ship iteen miles to the northward of her account, which we dged to be the effect of a current; and on Saturday ovember, 2. we found her thirty eight miles to the fouthand of her account. Our latitude by observation was 3° 'N., longitude 103° 20' E. We had here foundings forty-two and forty-three fathom, with foft mud.

At seven o'clock the next morning, Sunday 3. we saw eilland of Timoan, bearing S. W. by W. distant about elve leagues. As Dampier has mentioned Pulo Timoas a place where some refreshments are to be procured, endeavoured to touch there, having lived upon falt proions, which were now become bad, ever fince we were Tinian; but light airs, calms, and a foutherly current, evented our coming to an anchor till late in the evening. selday 5. We had sixteen fathom at about the distance two miles from the shore, on a bay on the east side of island.

The next day, Wednesday 6. Ilanded to see what was to be and found the inhabitants, who are Malays, a furly infot let of people. As foon as they faw us approaching the re, they came down to the beach in great numbers, hagalong knife in one hand, a spear headed with iron in other, and a creffit or dagger by their fide. We went VOL. I. On

on shore, however, notwithstanding these hostile appearances, and a treaty soon commenced between us; but all we could procure, was about a dozen of fowls, and a goat and kid. We had offered them knives, hatchets, bill hooks, and other things of the same kind; but these they refused with great contempt, and demanded rupees: as we had no rupees, we were at first much at a loss how to pay for our purchase; but at last we bethought ourselves of some pocket handkerchiefs, and these they vouchsafed to

accept, though they would take only the best.

These people were of a small stature, but extremely well made, and of a dark copper colour. We saw among then one old man who was dressed somewhat in the manner of the Persians: but all the rest were naked, except a hand kerchief, which they wore as a kind of turban upon their heads, and some pieces of cloth which were fastened with a silver plate or class round their middles. We saw none of their women, and probably some care was taken to keep them out of our sight. The habitations are very neatly built of slit bamboo, and are raised upon posts about eight see from the ground. Their boats are also well made, and we saw some of a large size, in which we supposed that the carried on a trade to Malacca.

The island is mountainous and woody, but we found i pleasant when we were ashore; it produces the cabbag and cocoa nut trees in great plenty, but the natives di not chuse to let us have any of the fruit. We saw all fome rice grounds, but what other vegetable production Nature has favoured them with, we had no opportunity t learn, as we staid here but two nights and one day. the bay where the ship rode, there is excellent sishing though the furf runs very high: we hauled our seine wit great success, but could easily perceive that it gave un brage to the inhabitants, who consider all the fish about these islands as their own. There are two fine rivers the run into this bay, and the water is excellent: it was inde fo much better than what we had on board, that I filled many casks with it as loaded the boat twice. While lay here, some of the natives brought down an anim which had the body of a hare, and the legs of a deer: of of our officers bought it, and we should have been gla to have kept it alive, but it was impossible for us to pro

eare for it such food as it would eat; it was therefore killed, and we found it very good food. All the while we lay here, we had the most violent thunder, lightning and rain, that I had ever known; and sinding that nothing more was to be procured, we sailed again in the morning, Thursday 7. with a fine breeze off the land. In the afternoon, we tried the current, and sound it set S. E. at the rate of a mile an hour. The variation here was 38' W. We certainly made this passage at an improper season of the year; for after we came into the latitude of Pulo Condore, we had nothing but light airs, calms, and tornados, with violent rain, thunder and lightning.

At seven o'clock in the morning, Sunday 10. we saw the east end of the island of Lingen, bearing S. W. by W. distant eleven or twelve leagues. The current set S. S. E. at the rate of a mile an hour. At noon, it sell calm, and I anchored with the kedge in twenty sathom. At one o'clock, the weather having cleared up, we saw a small sand bearing S. W. & S. distant ten or eleven leagues.

which hoisted Dutch colours. In the night we had no lent rain, with hard squalls, during one of which we part ed the stream cable, and therefore let go the small bowe At eight in the morning, Thursday 14. the wind became moderate and variable, from N. N. W. to W. S. W. W. got out our long boat and weighed the stream anchor, an at nine made fail. We found the current still very strong to the eastward; and at two, we anchored again in four teen fathom, Pulo Taya bearing N. W. & N. distant be tween seven and eight leagues. The vessel which we ha feen the day before under Dutch colours, still lying at an chor in the same place, I sent a boat with an officer t speak with her: the officer was received on board wit great civility; but was extremely surprised to find that h could not make himself understood, for the people on boar were Malays, without a fingle white man among them they made tea for our men immediately, and behaved wit great cheerfulness and hospitality. The vessel was of an ry fingular construction; her deck was of slit bamboo, an the was fleered, not by a rudder, but by two large piece of timber. one upon each quarter.

The next morning, Friday 15. at fix o'clock, w weighed and made sail: at two. Monopin Hill bore S. b E. distant about ten or eleven leagues, and had the appear ance of a small island. It bears S. by W. from the Sere Islands, and is distant from them about twelve leagues: latitude is 2° S. From the Seven Islands we steered W. by S. and had regular foundings from twelve to few fathom, and soon after we saw the coast of Sumatra, ber ing from W. S. W. to W. by N. at the distance of about the feven leagues. In the evening we anchored in feven for all thom; and the next morning, Saturday 16. at four, we may as re fail again, and continued our course S. E. by E. till the is fr peak of Monopin Hill bore east, and Batacarang Point, the Sumatra shore, S. W. to avoid a shoal, called Fred rick Hendrick, which is about midway between the Ba ca and Sumatra shore: the soundings were thirteen and ith fourteen fathom. We then steered E. S. E. and kept mid a channel to avoid the banks of Palambam River, and the me which lies off the westermost point of Banca. When we F were abreast of Palambam River, we regularly shoaled of the, a water from fourteen to seven fathom; and when we he ore,

affed it, we deepened it again to fifteen and sixteen faom. We continued to steer E. S. E. between the hird and Fourth Points of Sumatra, which are about ten agues distant from each other: the soundings, nearest to e Sumatra shore, were all along from eleven to thirteen thom; and the high land of Queda Banca appeared over e Third Point of Sumatra, bearing E S. E. From the third Point to the Second, the course is S. E. by S. at e distance of about eleven or twelve leagues. The high nd of Queda Banca, and the Second Point of Sumatra. ar E. N. E. and W. S. W. of each other. The Streight er to about five leagues over, and in the mid-channel there is thirteen fathom; Monopin Hill bearing N. W.; and boar the Third Point of Sumatra, S. E. by E. distant between wo and three leagues. Many small vessels were in fight, wit ad most of them horsted Dutch colours. In the night a we had fresh gales and squalls, with thunder and lightning, o, and and hard rain; but as our cables were good, we were in piece danger, for in this place the anchor is buried in a stiff

In the morning, Sunday 17. the current or tide let to e S. E. at the rate of three knots; at five we weighed, Sere ight the tide shifted, and ran as strongly to the N. W.;

that it ebbs and flows here twelve hours.

On Tuefday 19 we spoke with an English snow, belongfew g to the East India Company, which was bound from encoolen to Malacca and Bengal. We had now nothing to about the ship's provisions, which were become very bad, en fir all our beef and pork stunk intolerably, and our bread e mai as rotten and full of worms; but as foon as the master of is fnow learnt our fituation, he generously sent me a cint, of eep, a dozen of fowls, and a turtle, which I verily betred eve was half his stock, besides two gallons of arrack, and e Bar ould accept nothing but our thanks in return. It is en an ith great pleasure that I pay this tribute to his liberality, ept m id am very forry that I cannot recollect his name, or the id the me of his vessel. In the afternoon, we worked round hen be First Point of Sumatra, and our soundings on the north led of le, at the distance of about a mile and a half from the we his ore, were fourteen fathom. At half an hour after three

M 3

we anchored, and fent a boat to found for the shoals which lie to the northward of the island called Lasipara, which bore from us S. E. by S. diffant about fix leagues. Little wind, and a strong tide of flood to the northward, pre vented our working between these shoals and the coast of Sumatra till the afternoon of Wednesday 20. the founding were very regular, being nine or ten fathom as we floor over to the island, and five or fix when we stood over to Sumatra. As this Streight has been often navigated, and is well known, it is not necessary to insert all the partieur lars of our passage through it; I shall therefore only say lovers that at fix o'clock in the evening of Tuesday 27. we steer bwn, ed between the islands Edam and Horn, and entered the tout road of Batavia. At eight, we anchored without the ships e wit Onrust bearing W. N. W. distant five or fix miles.

## CHAP. XIII.

Transactions at Batavia, and Departure from that Place agnit

THE next day, which by our account was Wednesday 28. but by the account of the Dutch at this place was the 29 we having loft a day by having steered west ers w ward a year, we anchored nearer to the town, and faluter pules the water fort with eleven guns, which were returned rele We found here above a hundred fail great and small, and among others, a large English ship belonging to Bombay ere t which saluted us with thirteen guns.

There is always lying here a Dutch Commodore belong the cit ing to the Company, who, among his countrymen, is them, person of very great consequence. This gentleman thought inven fit to fend his boat on board of me, with only the cockswait to in her, who was a very dirty ragged fellow: as foon as he ates t was brought to me. he asked whence I came, whither was bound, and many other questions, which I though equally impertinent, at the same time pulling out a book see, and pen and ink, that he might fet down the answers treet but as I was impatient to fave him this trouble, he was de cir his boat, with which he was graciously pleased to comply When

the ain,

alm

nic

nic

ittl

When

When we came to this place, we had not one man fick in ther of the ships; but as I knew it to be more unhealthy an any other part of the East Indies, as the rainy season pre as at hand, and arrack was to be procured in great plenty, determined to make my stay here as short as possible. I ing ent on shore to wait upon the Dutch Governor, but as told that he was at his country house, about four miles to thank from the town. I met however with an officer, lied a shebander, who is a kind of master of the ceremoand slied a shebander, who is a kind of matter of the ceremofay Covernor immediately, rather than wait for his coming to eer win, he would attend me; I accepted his offer, and we the tout together in his chariot. The Governor received nips e with great politeness, and told me, that I might either ke a house in any part of the city that I should like, or provided with lodgings at the hotel. This hotel is a liensed lodging-house, the only one in the place, and kept ra Frenchman, an artful fellow, who is put in by the overnor himself. It has indeed more the appearance of palace than a house of entertainment, being the most Place agnificent building in Batavia; nor would a small edia answer the purpose, for as there is a penalty of five esday undred dollars upon any person in the city who shall suflace ta stranger to sleep a single night at his house, the stranwest es who make it their residence are never sew: all the luter ousses indeed have a stately appearance on the outside, and and hinese, of whom there are great numbers at this place, abay are the architects. The city is large, and the Areets well dout, but they have greatly the appearance of those in long ecities of Holland, for a canal runs through most of is tem, with a row of trees planted on each fide: this is sugh invenient for the merchants, who have every thing brought wait to their own doors by water, but it probably contrias he sites to the unhealthiness of the place; the canal, indeed, her the city is built in a swamp, might be necessary as a ough ain, but the trees, though they have a pleasant appearbook see, must certainly prevent the noxious vapours that are wers repetually arising, from being dispersed, by obstructing as de circulation of the air.

it of The number of people here is incredible, and they are mply almost every nation in the world, Dutch, Portuguese, Chinese,

Chinese, Persians, Moors. Malays, Javanese, and man others: the Chinese, however, have a large town to them felves, without the walls, and carry on a confiderable trade for they have annually ten or twelve large junks from Chi na; and to these the opulence of the Dutch at Batavia in a great measure owing The beef here is bad, and the mutton scarce, but the poultry and fish are excellent and in great plenty. Here are also the greatest variety and abundance of the finest fruit in the world, but the mul quitos, centipeds. scorpions, and other noxious vermin which are innumerable, are extremely troublesome, espe cially to strangers. The roads, for many miles about the city, are as good as any in England: they are very broad and by the fide of them runs a canal, shaded by tall tree which is navigable for veffels of a very large fize: on the other fide of the canal are gardens, of a very pleasant ap pearance, and country houses of the citizens, where the fpend as much of their time as possible, the situation being less unwholesome than the city; and there are so sew of them who do not keep a carriage, that it is almost a dil grace to be feen on foot.

At this place I continued from the 28th of November to Monday the 10th of December, when, having prom red what refreshments I could for my people, and take on board a fufficient quantity of rice and arrack, to fen for the rest of the voyage, I weighed anchor and made sal The fort saluted me with eleven guns, and the Duto Commodore with thirteen, which I returned; we wer faluted also by the English ship. We worked down! Prince's Island, in the Streight of Sunda, and came to anchor there on Friday 14. In this passage, the boat came off to us from the Java shore, and supplied us wil turtle in such plenty, that neither of the ships' companie eat any thing elfe. We lay at Prince's Island till Monda 19. and during all that time we subsisted wholly upon the same food, which was procured from the inhabitants at very reasonable rate. Having now taken on board as muc wood and water as we could flow, we weighed, and go without Java Head before night: but by this time a dat gerous putrid fever had broken out among us; three my people had died, and many others now lay in dangerous a condition that there were little hopes of the

very kgr sea.

I flood in for the land, and when I was within about poleagues of it, I saw a great smoke rising from a sandy ach. I imagined the smoke to be made by the Hottents; yet I was astonished at their chusing this part of the all for their residence, for it consisted of nothing but nd banks as far as we could fee, without the least built ingle blade of verdure, and so heavy a sea broke uon the coast, that it was impossible to catch any fish.

On Wednesday 12. At three o'clock in the afternoon, came were abreast of Cape Lagullas, from which the coast s W. N. W. to the Cape of Good Hope, which is difnt about thirty leagues. The next day we passed beeen Penguin Island and Green Point, and worked into able Bay with our top-fails close reefed, there being a tong gale, with hard squalls, at S. S. E. At three o's ock in the afternoon, we anchored, and saluted the fort, hich was returned. The Dutch told me, that none of cir ships could have worked in such a gale of wind, and that

that we feemed to come in faster than they were gener able to do when the wind was fair.

The next morning, Friday 14. I waited upon the 0 vernor, who had fent his coach and fix to the waterfor me. He is an old man, but is a favourite with all ranks people: he received me with the greatest politeness, and only offered me the Company's house in the garden for residence while I should continue at the Cape, but his con whenever I should think fit to use it. As I was one day dinner with him, and some other gentlemen. I took occasi to mention the smoke that I had seen upon one of the dy beaches on a desolate part of the coast, and the surpr with which it had struck me: they then told me that an ther ship, some time before, had fallen in with that part the coast and had seen large smokes as I had done, althou the place was uninhabited, and supposed to be an island: account for the smokes, however, they told me also, that Dutch East Indiamen had, about two years before, sail from Batavia for the Cape, and had never afterwards be heard of; and it was supposed that one or both of them been shipwrecked there, and that the smokes which had be feen, were made by some of the unfortunate crew: the added, that they had more than once fent out vessels look for them, but that there broke so dreadful a sea up the coast, they were obliged to return without attempti to get on shore. When I heard this melancholy account I could only regret that I had not known it before, for would then certainly have made every effort in my por to have found these unhappy wretches, and taken the from a place where now, in all probability, they must ferably perish.

The Cape is certainly a most excellent place for ships touch at; it is a healthy climate, a fine country, and about with refreshments of every kind. The company's gard is a delightful spot, and at the end of it there is a paddo belonging to the Governor, in which are kept a gr number of rare and curious animals, and among other when I was there, there were three fine offriches, and he zebras of an uncommon fize. I gave all the people le to go on shore by turns, and they always contrived to very drunk with Cape wine before they came back. Ma

scame in while we lay here; some were Dutch, some nch, some Danes, but all were outward bound.

Having continued here three weeks, and during that erefreshed our men, and completed our water, I took e of the good old Governor on Thursday, March 6. on Friday 7. failed out of the bay, with a fine breeze

8. E. On Sunday 16. At fix in the morning, we faw the nd of St Helena, bearing W. by N. at the distance of ut fixteen leagues, and about noon, a large ship, which ved French colours. We pursued our course, and a days afterwards, as we were failing with a fine gale, and great distance from land, the ship suddenly received de shock, as if she had struck the ground: this instantrought all who were below upon the deck in great connation, and upon looking out we faw the water to a large extent, tinged with blood; this put an end to fears, and we concluded that we must have struck eira whale or a grampus, from which the ship was not ly to receive much damage, nor in fact did the receive

About this time also we had the misfortune to bury

carpenter's mate, a very ingenious and diligent young , who had never been well after our leaving Batavia. On Tuesday 25. We crossed the equator, in longitude 10' W. and the next morning, Captain Cumming e on board, and informed me that the Tamar's three ccour er rudder braces on the stern were broken off, which dered the rudder unserviceable. I immediately sent the penter on board, who found the condition of the braces worfe than had been reported, so that the rudder ld not possibly be new hung; he therefore went to work n a machine, like that which had been fixed to the Ipch, and by which she was steered home: this machine bont five days he completed, and with some little alterns of his own, it was an excellent piece of work. The mar fleered very well with it, but thinking that it might be sufficient to secure her in bad weather, or upon a shore, I ordered Captain Cumming to run down to tigua, that he might there heave the ship down, and the rudder new hung, with a fresh set of braces which had with him for that purpole; for the braces with ch the ship went out, being of iron, were not expected

# r32 COMMODORE BYRON'S VOYAGE, &c.

to last as long as our's, the lower ones, with the sheathin

being of copper.

Pursuant to these orders, the Tamar parted company with us on Tuesday, April 1. and steered for the Caribbo Islands. When we came into latitude 34° N., longitude 35° W., we had strong gales from W. S. W. to W. W. W. with a great sea, which broke over us continually so six days successively, and run us into latitude 48° N., longitude 14° W. On Thursday, May 7. at seven o'close in the morning, we made the Islands of Scilly, having begint nine weeks coming from the Cape of Good Hope, as somewhat more than two and twenty months upon the Voyage; Saturday 9. the ship came to anchor in the Downs, and on the same day I landed at Deal, and set of the London.

# ACCOUNT

OF A

# Voyage round the World,

IN THE YEARS

DCCLXVI, MDCCLXVIII, and MDCCLXVIII.

By SAMUEL WALLIS, Efq;

Commander of his Majesty's Ship the DOLPHIN.

#### CHAP. I.

he Passage to the Coast of Patagonia, with some Account of the Natives.

he longitude in this voyage is reckoned from the meridian of London.]

AVING received my commission, which was dated June 19. 1766, I went on board the same day, issed the pendant, and began to enter seamen, but, cording to my orders, took no boys either for myself or yof the officers.

The ship was sitted for the sea with all possible expeditiduring which the articles of war, and the act of parlinent were read to the ship's company: on Saturday, Ju-26. we sailed down the river, and on Saturday, Auouth Sound.

On Tuesday 19. I received my sailing orders, with dithions to take the Swallow sloop, and the Prince Fredek store ship under my command: and this day I took
board, among other things, three thousand weight of
stable soup, and a bale of cork-jackets. Every part of
thip was filled with stores and necessaries of various
Vol. I.

kinds, even to the steerage and state-room, which were a than to lotted to the flops and portable foup. The furgeon offe t leaf ed to purchase an extraordinary quantity of medicines, a latitud medical necessaries, which, as the ship's company mig on become sickly, he said would in that case be of great so wice, if room could be found to stow them in; I therefore the same of the same states of the same of the sam gave him leave to put them into my cabbin, the only pla les abo in the ship where they could be received, as they consist In t of three large boxes.

On Friday 22. at four o'clock in the morning, I weig Monda ed and made fail in company with the Swallow and Prin at noo Frederick, and had soon the mortification to find that to Inesd

Swallow was a very bad failer.

We proceeded in our voyage, without any remarkab and, a incident, till Sunday the 7th of September, when, about In this eight o'clock in the morning, we saw the island of Por with r Santo, bearing west; and about noon faw the cast end ripplir the island of Madeira.

About five o'clock we ran between this end of the without and and the Deserters. On the side next, the Deserters. island and the Deserters. On the side next the Deserte We st is a low flat island, and near it a needle rock; the fide ne ter ha to Madeira is full of broken rocks, and for that reason not fafe to come within less than two miles of it.

At fix in the evening we anchored in Madeira Roa ers are about two thirds of a mile from the shore, in 24 fatho of Sal with a muddy bottom: about eight the Swallow and Prin the m Frederick also came to an anchor; and I sent an officer 230 \ shore to the Governor, to let him know that I would to On lute him, if he would return an equal number of gut the iff which he promised to do; therefore the next mornin soon a Monday 8. at fix o'clock, I faluted him with thirteen gur hour a and he returned thirteen as he had promised.

Having taken in a proper quantity of water at the ting t place, with four pipes and ten puncheons of wine, for and to fresh beef, and a large quantity of onions, we weighed a N. los

chor on Friday 12. and continued our voyage.

At fix o'clock in the morning, Tuesday 16. we saw t W. b island of Palma, and found the ship 15 miles to the sont distant ward of her reckoning. As we were failing along the chore island, at the rate of no less than eight miles an hour, wi Swall the wind at east, it died away at once; so that within pon s

compa

from S

ings. ers, it

the di

At

re: han two minutes the ship had no motion, though we were offe teast four leagues distant from the shore. Palma lies in nitude 28° 40' N. longitude 17° 48' W.

on Saturday 20. we tried the current, and found it set & W. by W. one mile an hour: this day we saw two her efor ons flying to the eastward, and a great number of bonet-

pla so about the ship, of which we caught eight.

rin

nd

ld I

fift In the night between Monday 21. and 22. we loft our companion the Swallow, and about eight in the morning, Monday 22. we saw the island of Sal, bearing S. 1 W.; t noon it bore S. \(\frac{1}{4}\) W. distant 8 leagues; and at noon on t Inesday 23. the nearest land of the island of Bonavista bore from S. to W. S. W. distant seven or eight miles, the east kah and, at the same time, bearing W. distant two leagues. abo In this situation we sounded, and had only sisteen fathom, Por with rocky ground; at the same time we saw a very great rippling, which we supposed to be caused by a reef, stretching off the point about E. S. E. 3 miles, and the breakers ing off the point about E. S. E. 3 in the direction of S. E. without us, distant also about 3 miles in the direction of S. E. erte. We steered between the rippling and the breakers, but afne ter hauling the ship off about half a mile, we had no foundon ings. The Prince Frederick passed very near the breakers, in the S. E., but had no foundings: yet these break-Roa es are supposed to be dangerous. The middle of the isle the of Sal is in latitude 16° 55' N. longitude 21° 59' W. rin the middle of Bonavitta is in latitude 16° 10' longitude cer 23° W.

On the next day, Wednesday 24. at six in the morning, gur the isle of May bore from W. to S. W. six leagues; and son after the Swallow again joined company. At half an gui hour after 10 the west-end of the isle of May bore north at the distance of five miles, and we found a current here sett the ting to the fourthward at the rate of twenty miles in four for and twenty hours. The latitude of this island is 15° 10'

ed a N. longitude 22°-25' W.

At noon the south end of the island of St Iago bore S. wt W. by W. distant four leagues; and the north-end N. W. sont distant five leagues. At half an hour after three we ang the chored in Port Praya, in that illand, in company with the , wi Swallow and Prince Frederick, in eight fathom water, upon sandy ground. We had much rain and lightning in

N 2

the

the night, and early in the morning, Thursday 25. I sent to the commanding officer at the fort, for leave to get off some water, and other refreshments, which he granted.

We foon learnt that this was the fickly season, and that the rains were so great as to render it extremely difficult to get any thing down from the country to the ships: it happened also, unfortunately, that the small pox, which is extremely satal here, was at this time epidemic; so that I permitted no man to go ashore who had not had that distance, and I would not suffer even those that had to go into any house.

We procured, however, a supply of water and some cattle from the shore, and caught abundance of fish with the seine, which was hauled twice every day: we found also in the valley where we got our water, a kind of large purslain, growing wild in amazing quantities: this was a most welcome refreshment both raw as a sallad, and beiled with the broth and pease; and when we left the place we carri-

ed away enough of it to ferve us a week.

On Sunday 28. at half an hour after twelve we weighed and put to sea; at half an hour after six in the evening the peak of Fuego bore W. N. W. distant 12 leagues, and in

the night the burning mountain was very visible.

This day I ordered hooks and lines to be served to all the ship's company, that they might catch fish for themselves; but at the same time I also ordered that no man should keep his fish more than four and twenty hours before it was eaten, for I had observed that stale, and even dried fish, had made the people sickly, and tainted the air in the ship.

On the first of October, Wednesday 1. in latitude 10° 37' N. we lost the true trade-wind, and had only light and variable gales; and this day we found that the ship was set twelve miles to the northward by a current; on Friday 3. we found a current run S. by E. at the rate of six sathom an hour, or about twenty miles and an half a day: on Tuesday 7. we found the ship 19 miles to the southward of

her reckoning.

On Monday 20. our butter and cheese being all expended, we began to serve the ship's company with oil, and I gave orders that they should also be served with multard and vinegar once a fortnight during the rest of the voyage.

On wed we convail found fupply which On

On Wednesday 22. we saw an incredible number of irds, and among the relt a man of war bird, which inclied us to think that some land was not more than fixty lagues distant : this day we croffed the equator in longitude 23° 40' W.

On Friday 24. I ordered the ship's company to be sered with brandy, and reserved the wine for the sick and convalescent. On Sunday 26. the Prince Frederick made ignals of diffress, upon which we bore down to her, and found that she had carried away her fore-top-sail-yard. To apply this lofs we gave her our sprit-fail-top-sail-yard, thich we could spare, and she hoisted it immediately.

Qu

On Monday 27. The again made figuals of distress, upon which I brought to, and fent the carpenter on board her, tho returned with an account that she had sprung a leak under the larboard cheek forward, and that it was impossile to do any thing to it till we had better weather. Upon peaking with Liuetenant Brine, who commanded her, he nformed me that his crew were fickly; that the fatigue of working the pumps, and constantly standing by the fails, ad worn them down; that their provisions were not good, hat they had nothing to drink but water, and that he fared it would be impossible for him to keep company with me except I could spare him some assistance. For he badness of their provision I had no remedy, but I sent mboard a carpenter and fix feamen to affift in pumping and forking the ship.

On Saturday, November 8. being in latitude 25° 52' S. longitude 39° 38', we founded with 160 fathom, but ad no ground: on Sunday 9. having seen a great numer of birds, called albatrosses, we sounded again with 180 athom, but had no ground. Eliante sei ?

On Tuesday 11. having by signal brought the store-ship inder our stern, I sent the carpenter, with proper assistants, in board to stop the leak; but they found that very little ould be done: we then completed our provisions, and hose of the Swallow, from her stores, and put on board er all our staves, iron hoops, and empty oil jars. The ext day I fent a carpenter and fix feamen to relieve the nen that had been sent to assist her on the 27th of Octottard str, who, by this time, began to suffer much by their fatigue. Several of her crew having the appearance of the fcurvy, I fent the furgeon on board her with some med cines for the fick. This day, having feen some albatroffe turtles, and weeds, we founded, but had no ground wit 180 fathom.

On Wednesday 12. being now in latitude 30° south we began to find it very cold; we therefore got up of quarter cloths, and fitted them to their proper places, an for the seamen put on their the jackets. This day we far a turtle, and several albatroses, but still had no ground wit 180 fathom.

- We continued to see weeds and birds on board the shir but had no ground till Tuesday 18. when we found a so muddy bottom at the depth of 54 fathom. We were no in latitude 35° 40' S. longitude 49° 54' W.; and this w the first founding we had after our coming upon the coa of Brazil.

On Wednesday 19. about eight o'clock in the evening we saw a meteor of a very extraordinary appearance in the diffe north-east, which, soon after we had observed it, slew o in a horizontal line to the fouth-west, with amazing rap from dity: it was near a minute in its progress, and it left much train of light behind it so strong, that the deck was no less illuminated than at noon-day. This day we saw difts great number of feals about the thip, and had foundings gitt 55 fathom, with a muddy bottom. The next day, Thur day 20. the feals continued, and we had foundings at 5 fathom, with a dark coloured fand; upon which we be

our cables. On Friday 21. we had no ground with 150 fathor hor Our latitude at noon was 37° 40' S. longitude 51° 24 Tofour

On Saturday 22. we had foundings again at 70 fathor with a dark brown fand, and faw many whales and feals bout the ship, with a great number of butterflies, and bird among which were inipes and plovers. Our latitude

noon was 38° 55' longitude 56° 47' W.

Our foundings continued from 40 to 70 fathom, t Monday, December 8. when, about fix o'clock in t morning, we saw land bearing from S. W. to W. by and appearing like many small islands. At noon it bot abo from W. by S. to S. S. W. distant 8 leagues, our latitue bore then being 47° 16' S. longitude 64° 58' W. About

block Cape Blanco bore W. N. W. distant fix leagues, nd a remarkable double saddle W. S. W. distant about hree leagues. We had now foundings from 20 to 16 fahom, sometimes with coarse sand and gravel, sometimes with small black stones and shells. At eight in the evenfouth in the Tower rock at Port Defire bore S. W. by W. difip of about three leagues; and the extremes of the land s, an from S. by E. to N. W. by N. At nine, Penguin Island e sa bore S. W. by W. 1 W. distant two leagues; and at four wit sclock in the morning of Tuesday 9. the land seen from the mast-head bore from S. W. to W. by N.

e ship At noon, Penguin island bore S. by E. distant 57 miles; a for our latitude being 48° 56' S. longitude 65° 6' W. This re no day we faw fuch a quantity of red shrimps about the ship his we that the fea was coloured with them.

e coa At noon the next day. Wednesday 10. the extremes of the land bore from S. W. to N. W. and Wood's Mount, vening near the entrance of Saint Julian's, bore S. W. by W. in the distant three or four leagues. Our latitude was 49° 16' lew of S. our longitude 66° 48' W.; and our foundings were g rap from 40 to 45 fathom, sometimes fine sand, sometimes soft t left mud.

was ne Thursday 1 :. At noon, Penguin Island bore N. N. E. faw distant 58 leagues. Our latitude was 50° 40' S., our lonlings gitude 67° 10' W.

Thur We continued our course till Saturday 13. when our laat 5 titude being 50° 34' S. and our longitude 68° 15' W. the we be extremes of the land bore from N. 1 E. to S. S. W. 1 W. and the ship was about five or six miles distant from the fathon shore. Cape Beachy-head, the northermost cape was found to lie in latitude 50° 16' S. and Cape Fairweather, fathor the southermost cape, in latitude 50° 50' S.

feals On Sunday 14. at four in the morning, Cape Beachyd bird head N. W. 1 N. distant about eight leagues; and at noon, itude our latitude being 50° 52' S. and longitude 68° 10' W. Penguin island bore N. 35° E. distant 68 leagues. We om, twere fix leagues from the shore, and the extremes of the in the land were from N. W. to W. S. W.

Monday 15. At eight o'clock in the morning, being it bo about fix miles from the shore, the extremes of the land latitu bore from S. by E. to N. by E. and the entrance of the bout fiver Saint Croix S. W. 1 W. We had 20 fathom quite crois

crois the opening, the distance from point to point being about seven miles, and afterwards keeping at the distance of about four miles from each cape, we had from 22 to 24 fathom. The land on the north shore is high, and appear in three capes; that on the fouth shore is low and flat. feven in the evening, Cape Fairweather bore S. W. 1 8 distant about four leagues, a low point running out from it S. S. W. 3 W. We stood off and on all night, and had from 30 to 22 fathom water, with a bottom of fand and mud. At feven the next morning, Tuesday 16, we shoaled gradually into 12 fathom, with a bottom of fine fand, and foon after into fix: we then hauled off S. E. by S. somewhat more than a mile: then steered east five miles, then E. by N. and deepened into : 2 fathom. Cape Fairweather at this time bore W. & S. distant four leagues and the northermost extremity of the land W. N. W. When we first came into shoal water, Cape Fairweather W. I N. and a low point without it W. S. W. distant a bout four miles. At noon Cape Fairweather bore W. N W 1 W. distant six leagues, and a large hummock S. W. W. distant seven leagues. At this time our latitude was 51° 52' S. longitude 68° W.

At one o'clock, being about two leagues distant from the shore, the extremes of three remarkable round hills bore from S. W. by W. to W. S. W. At sour, Cape Virgin Mary bore S. E. by S. distant about four leagues At eight, we were very near the Cape, and upon the point of it saw several men riding, who made signs for us to come on shore. In about half an hour we anchored in a bay, close under the south side of the Cape, in ten say thom water, with a gravelly bottom. The Swallow and store ship anchored soon after between us and the Cape which then bore N. by W. \frac{1}{2} W. and a low sandy point like Dungeness S. by W. From the Cape there runs should be easily known by the weeds that are upon it. We found it high water at half an hour after eleven, and the tide role

twenty feet.

The natives continued abreast of the ship all night, making several great sires, and frequently shouting very load. As soon as it was light in the morning, Wednesday 17 we saw great numbers of them in motion, who made sign

rus to land. About five o'clock I made the fignal for boats belonging to the Swallow and the Prince Fredek to come on board, and in the mean time hoisted out mown. These boats being all manned and armed, I ok a party of marines, and rowed towards the shore, wing left orders with the mafter to bring the ship's broadto bear upon the landing place, and to keep the guns eded with round shot. We reached the beach about fix block, and before we went from the boat, I made figns the natives to retire to some distance: they immediately implied, and I then landed with the Captain of the Swalw, and several of the officers: the marines were drawn , and the boats were brought to a grappling near the ore. I then made figns to the natives to come near, and rected them to fit down in a semicircle, which they did ith great order and cheerfulness. When this was done, diffributed among them several knives, scissars, buttons, ads, combs, and other toys, particularly some ribands the women, which they received with a very becoming ixture of pleasure and respect. Having distributed my resents, I endeavoured to make them understand that I dother things which I would part with, but for which expected somewhat in return. I shewed them some tchets and bill hooks, and pointed to some guanicoes, hich happened to be near, and some ostriches which I w dead among them; making figns at the same time that wanted to eat; but they either could not, or would not iderstand me: for though they seemed very desirous of chatchets and the bill-hooks, they did not give the least timation that they would part with any provisions; no affic therefore was carried on between us.

Each of these people, both men and women, had a horse, the adecent saddle, stirrups, and bridle. The men had soden spurs, except one, who had a large pair of such as a worn in Spain, brass stirrups, and a Spanish scimeter, thout a scabbard; but notwithstanding these distinctions, did not appear to have any authority over the rest: the omen had no spurs. The horses appeared to be well ade, and nimble, and were about 14 hands high. The ople had also many dogs with them, which, as well as

horses, appeared to be of a Spanish breed.

As I had two measuring rods with me, we went roun and measured those that appeared to be tallest among them One of these was fix feet seven inches high, several mor were fix feet five, and fix feet fix inches; but the statur of the greater part of them was from five feet ten to fi feet. Their complexion is a dark copper colour, like the of the Indians in North America; their hair is straight and nearly as harsh as hog's briftles: it is tied back with cotton string, but neither fex wears any head dress. The are well made, robust, and boney; but their hands and fee are remarkably small. They are clothed with the skin of the guanicoe, sewed together into pieces about fix fe long, and five feet wide: these are wrapped round th body, and fastened with a girdle, with the hairy side is wards; some of them had also what the Spaniards has called a puncho, a square piece of cloth made of the down hair of the guanicoe, through which a hole being of for the head, the rest hangs round them about as lo as the knee. The guanicoe is an animal that in fiz make, and colour, resembles a deer, but it has a hun on its back, and no horos. These people wear also kind of drawers, which they pull up very tight, and b skins, which reach from the mid-leg to the instep befor and behind are brought under the heel; the rest of the foot is without any covering. We observed that for of the men had a circle painted round the left eye, a that others were painted on their arms, and on differe parts of the face; the eye-lids of all the young wom were painted black. They talked much, and some them called out Ca-pi-ta-ne: but when they were spok to in Spanish, Portuguese, French, and Dutch, they ma no reply. Of their own language we could distinguish on one word, which was chevore: we supposed it to be a la tation, as they always pronounced it when they show hands with us, and when, by figns, they asked us to gi them any thing. When they were spoken to in Engli they repeated the words after us as plainly as we could de and they foon got by heart the words " Englishmen con " on shore." Every one had a missile weapon of a sing lar kind, tucked into the girdle. It confifted of two rou stones, covered with leather, each weighing about a poul

hich were fastened to the two ends of a string about eight et long. This is used as a sling, one stone being kept in chand, and the other whirled round the head till it is pposed to have acquired sufficient force, and then dislarged at the object. They are so expert in the manageent of this double-headed shot, that they will hit a mark at bigger than a shilling, with both the stones, at the diface of fifteen yards; it is not their custom, however, to ike either the guanicoe or the offrich with them in the hace, but they discharge them so that the cord comes aainst the legs of the ostrich, or two of the legs of the unicoe, and is twisted round them by the force and ring of the balls, so that the animal being unable to run, comes an easy prey to the hunter.

While we stayed here, we saw them eat some of their th meat raw, particularly the paunch of an offrich, wibout any other preparation or cleaning than just turning infide out, and shaking it. We observed among them seral beade, such as I gave them, and two pieces of red size, which we supposed had been left there, or in the

eighbouring country, by Commodore Byron.

After I had spent about four hours with these people, made signs to them that I was going on board, and at I would take some of them with me if they were derous to go. As foon as I had made myself understood, bove an hundred eagerly offered to visit the ship; but I id not chuse to indulge more than eight of the number. They jumped into the boats with the joy and alacrity of hildren going to a fair, and having no intention of misook thef against us, had not the least suspicion that we intendma dany mischief against them. They sung several of their on country fongs while they were in the boat, and when they ame on board did not express either the curiofity or wonmange and stupendous, that at once presented themselves, aghinght be supposed to excite. I took them down into the abbin, where they looked about themselves. con able indifference, till one of them happened to cast his eyes pon a looking-glass: this however excited no more aftoimment than the prodigies which offer themselves to our magination in a dream, when we converse with the dead, yin the air, and walk upon the sea, without restecting that

that the laws of nature are violated; but it afforded then infinite diversion: they advanced, retreated, and played thousand tricks before it, laughing violently, and talking with great emphasis to each other. I gave them som beef, pork, biscuit, and other articles of the ship's provi fions: they eat, indifcriminately, whatever was offered to them, but they would drink nothing but water. From the cabbin I carried them all over the ship, but they look ed at nothing with much attention, except the animal which we had on board as live stock: they examined the hogs and sheep with some curiosity, and were exceedings delighted with the Guinea hens and turkies; they did no feem to defire any thing that they faw except our appare and only one of them, an old man, asked for that : we gra tified him with a pair of shoes and buckles, and to each of the others I gave a canvass bag, in which I put some needle ready threaded, a few slips of cloth, a knife, a pair of scissars, some twine, a few beads, a comb, and a looking glass, with some new sixpences and halfpence, through which a hole had been drilled, that was fitted with a rib and to hang round the neck. We offered them fom leaves of tobacco, rolled up into what are called fegan and they smoked a little, but did not seem fond of it. showed them the great guns, but they did not appear t have any notion of their use. After I had carried then through the ship, I ordered the marines to be drawn up and go through part of their exercise. When the first vol ley was fired, they were struck with astonishment and ter ror; the old man in particular, threw himself down o the deck, pointed to the muskets, and then striking hi breast with his hand, lay some time motionless, with hi eyes shut: by this we supposed he intended to shew us that he was not unacquainted with fire-arms, and their fatal ef fect. The rest seeing our people merry, and finding them selves unhurt, soon resumed their cheerfulness and goo humour, and heard the second and third volley fired withou much emotion; but the old man continued prostrate upo the deck some time, and never recovered his spirits till th firing was over. About noon, the tide being out, I ad quainted them by figns that the thip was proceeding fur ther, and that they must go on shore: this I soon perce ved they were very unwilling to do; all however, excep

he old man and one more, were got into the boat without such difficulty; but these stopped at the gang way, where the old man turned about, and went aft to the companion bdder, where he stood some time without speaking a word; be then uttered what we supposed to be a prayer; for he many times lifted up his hands and eyes to the heavens, and spoke in a manner and tone very different from what re had observed in their conversation: his oraison seemed be rather sung than said, so that we found it impossible distinguish one word from another. When I again inimated that it was proper for him to go into the boat, he pointed to the sun, and then moving his hand round to he west, he paused, looked in my face, laughed, and ointed to the shore: by this it was easy to understand hat he wished to stay on board till sun set, and I took no ttle pains to convince him that we could not stay so long pon that part of the coast, before he could be prevailed uon to go into the boat; at length however he went over he ship's side with his companions, and when the boat put of they all began to fing, and continued their merriment Il they got on shore. When they landed, great numbers sthose on shore pressed eagerly to get into the boat; but he officer on board, having positive orders to bring none them off, prevented them, though not without great issiculty, and apparently to their extreme mortification nd disappointment

When the boat returned on board, I fent her off again with the master, to sound the shoal that runs off from the point: he found it about three miles broad from north to outh, and that to avoid it, it was necessary to keep four niles off the Cape, in twelve or thirteen fathom water.

## CHAP. II.

The Passage through the Streight of Magellan, with some further Account of the Patagonians, and a Description of the Coast on each Side, and its Inhabitants.

A BOUT one o'clock, Wednesday December 17. I made the signal and weighed, ordering the Swallow to a head, and the store-ship to bring up the rear. The Vol. I.

wind was right against us, and blew fresh, so that we were obliged to turn into the Streight of Magellan with the streight of the Sand Point that resembles Dungeness. When we got a breat of this Point, we stood close into the shore, where we sat two guanicoes, and many of the natives on horseback, where we sat two guanicoes, and many of them: when the horsemen can near, they ran up the country at a great rate, and were pursued by the hunters, with their slings in their hand ready for the cast; but neither of them was taken while they were within the reach of our sight.

When we got about two leagues to the west of Dungs ness, and were standing off shore, we sell in with a short upon which we had but seven fathom water at half shoot this obliged us to make short tacks, and keep continual heaving the lead. At half an hour after eight in the even ing, we anchored about three miles from the shore, in a stathom, with a muddy bottom: Cape Virgin Mary the bearing N. E. by E. \(\frac{1}{2}\) E.; Point Possession W. \(\frac{1}{2}\) S.

the distance of about five leagues.

About half an hour after we had cast anchor, the nation made several large sires a breast of the ship, and at brea of day we saw about sour hundred of them encamped in sine green valley, between two hills, with their horses seeing beside them. About six o'clock in the morning Thursday 18. the tide being done, we got again und sail: its course here is from east to west; it rises and sall thirty seet, and its strength is equal to about three known an hour. About noon there being little wind, and the drunning with great force, the Swallow, who was a hear made the signal and came to an anchor; upon which I dithe same, and so did the store-ship, that was a stern.

As we saw great numbers of the natives on horsebacks breast of the ship, and as Captain Carteret informed in that this was the place where Commodore Byron had the conference with the tall men, I sent the Lieutenants of the Swallow and the store-ship to the shore, but with orde not to land, as the ships were at too great a distance to protect them. When these gentlemen returned, they told me that the boat having lain upon her oars very near the beat the natives came down in great numbers, whom they know to be the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons they had seen the day before, with the same persons the sam

many others, particularly women and children; that when they perceived our people had no defign to land, they kemed to be greatly disappointed, and those who had been in board the ship waded off to the boat, making figns for to advance, and pronouncing the words they had been aught, " Englishmen come on shore," very loud, many imes; that when they found they could not get the peole to land, they would fain have got into the boat, and that was with great difficulty they were prevented. That they resented them with some bread, tobacco, and a few toys, pointing at the same time to some guanicoes and ostriches, and making figns that they wanted them as provisions, but hat they could not make themselves understood; that fining they could obtain no refreshment, they rowed along he shore in search of fresh water, but that seeing no apgarance of a rivulet, they returned on board.

At fix o'clock the next morning, Friday 19. we weighd, the Swallow being still a-head, and at noon we anchoed in Possession Bay, having twelve fathom, with a clean indy bottom. Point Possession at this time bore east, diant three leagues; the Asses Ears west, and the entrance the Narrows S. W. + W.: the bottom of the bay, which as the nearest land to the ship, was distant about three iles. We faw a great number of Indians upon the Point, nd at night, large fires on the Terra del Fuega shore.

From this time, to Monday 22. we had strong gales nd heavy feas, so that we got on but flowly; and we ow anchored in 18 fathom, with a muddy bottom. The Asses Ears bore N. W. by W. + W. Point Possession N. by E. and the point of the Narrows, on the fouth fide, S. W. distant between three and four leagues. In this mation, our longitude, by observation, was 70° 20' W. titude 52° 30' S. The tide here sets S. E. by S. and L. E. by N. at the rate of about three knots an hour; the ater rises four and twenty feet, and at this time it was igh water at four in the morning.

In the morning of Tuesday 23. we made sail, turning to indward, but the tide was so strong, that the Swallow a set one way, the Dolphin another, and the store-ship third: there was a fresh breeze, but not one of the vess would answer her helm. We had various soundings, d saw the rippling in the middle ground: in these cir-

cumstances,

cumstances, fometimes backing, sometimes filling, we entered the first Narrows. About fix o'clock in the evening. the tide being done, we anchored on the fouth shore, in 40 fathom, with a fandy bottom; the Swallow anchored on the north shore, and the store-ship not a cable's length from a fand bank, about two miles to the eastward. The Streight here is only three miles wide, and at midnight, the tide being flack, we weighed and towed the ship thro' A breeze sprung up soon afterwards, which continued till seven in the morning, Wednesday 24. and then died away We steered from the first Narrows to the second S. W. and had 19 fathom, with a muddy bottom. At eight we anchored two leagues from the shore, in 24 fathom, Cape Gregory bearing W. & N. and Sweepstakes Foreland & W. + W. The tide here ran seven knots an hour, and fuch bores sometimes came down, with immense quantitie of forrel, that we expected every moment to be adrift.

The next day, Thursday 25. being Christmas day, w failed through the second Narrows. In turning thro' this part of the Streight we had 12 fathom within half a mil of the shore on each side, and in the middle 17 fathon 22 fathom, and no ground. At five o'clock in the even ing, the ship suddenly shoaled from 17 fathom to 5, Sain Bartholomew's Island then bearing S. 3 W. distant between three and four miles, and Elizabeth's Island S. S. W. W. distant five or six miles. About half an hour after eight o'clock, the weather being rainy and tempestuous we anchored under Elizabeth Island in 24 fathom, wit hard gravelly ground. Upon this island we found great quantities of celery, which, by the direction of the surge on, was given to the people, with boiled wheat and ports ble foup, for breakfast every morning. Some of the off cers who went a shore with their guns, saw two small dog and several places where fires had been recently made, wit many fresh shells of mussels and limpets lying about them they saw also several wigwams or huts, consisting of your trees, which, being sharpened at one end, and thrust int the ground in a circular form, the other ends were brough to meet, and fastened together at the top; but they is none of the natives.

overed with fnow, though it was the midst of summer in his part of the world: they were clothed with wood about hree parts of their height, and above with herbage, except where the fnow was not yet melted. This was the first lace where we had feen wood in all South America.

At two o'clock in the morning, Friday 26. we weighed, md having a fair wind, were a-breast of the north end of Elizabeth's Island at three: at half an hour after five, beg about mid-way between Elizabeth's Island and Saint George's Island, we suddenly shoaled our water from 17 sthom to fix: we struck the ground once, but the next all had no bottom with 20 fathom. When we were upon his shoal, Cape Porpoise bore W. S. W. + W. the south nd of Elizabeth's Island W. N. W. + W. distant three agues, the fouth end of Saint George's Island N. E. diitie aut four leagues. The store-ship, which was about half league to the fouthward of us, had once no more than our fathom, and for a considerable time not seven; the wallow, which was three or four miles to the fouthward, ad deep water, for the kept near to St George's Island. my opinion it is safest to run down from the north end Elizabeth's Island, about two or three miles from the ore, and so on all the way to Port Famine. At noon, a ow point bore E. & N. Fresh-water Bay S. W. & W. At his time we were about three miles distant from the north ore, and had no ground with 80 fathom. Our longiade, by observation, which was made over the shoal, was 10 2c' W. our latitude 53° 12' S.

About four o'clock we anchored in Port Famine Bay, urge 113 fathom, and there being little wind, sent all the orts outs, and towed in the Swallow and Prince Frederick.

off The next morning, Saturday 27. the weather being mally, we warped the ship farther into the harbour, and bored her with a cable each way in nine fathom. I then nt a party of men to pitch two large tents in the bottom the bay, for the fick, the wooders, and the fail-makers, t int the were foon after fent on shore, with the surgeon, the unner, and some midshipmen. Cape St Anne now bore y fam. E. by E. distant three quarters of a mile, and Sedger liver S. 4 W. and the state of the state of

On Sunday 28. we unbent all the fails, and fent them we have to be repaired, erected tents upon the banks of 03 Sedger

Sedger River, and fent all the empty casks on shore, with the coopers to trim them, and a mate and ten men to wash and fill them. We also hauled the seine, and caught fish in great plenty: some of them resembled mullet, but the flesh was very soft; and among them were a few fmelts, some of which were twenty inches long, and

weighed four and twenty ounces.

During our whole stay in this place, we caught fish e nough to furnish one meal a day both for the fick and the well: we found also great plenty of celery, and pea-tops which were boiled with the peafe and portable foup: be fides these, we gathered great quantities of fruit that re fembled the cranberry, and the leaves of a shrub somewhat like our thorn, which were remarkably four. When w arrived, all our people began to look pale and meagre many had the fourvy to a great degree, and upon other there were manifest signs of its approach; yet in a fort night there was not a scorbutic person in either of the ships Their recovery was effected by their being on shore, eat ing plenty of vegetables, being obliged to wash their appa vel, and keep their persons clean by daily bathing in the sea

The next day, Monday 29. we fet up the forge of shore; and from this time, the armourers, carpenters, and the rest of the people were employed in resitting the ship

and making ready for the sea.

In the mean time, a confiderable quantity of wood wa cut, and put on board the store-ship, to be sent to Falk land's Island; and as I well knew there was no wood grow ing there, I caused some thousands of young trees to be carefully taken up with their roots, and a proper quantity he fig of earth; and packing them in the best manner I could, put them also on board the store-ship, with orders to deli ver them to the commanding-officer at Port Egmont, and to fail for that place with the first fair wind, putting of board two of my feamen, who being in an ill state of healt when they first came on board, were now altogether unfi to proceed in the voyage.

On Wednesday, January 14. we got all our people and tents on board; having taken in seventy five tons of water from the shore, and twelve months provisions of all kinds at whole allowance, for ourselves, and ten months for the Swallow, from on board the store-ship, I sent the maste nd

the cutter, which was victualled for a week, to look out or anchoring-places on the north shore of the Streight.

After several attempts to sail, the weather obliged us continue in our old station till Saturday 17. when the Prince Frederick Victualler sailed for Falkland's illand, and the master returned from his expedition. The master reported that he had found four places, in which there was good anchorage, between the place where we lay and Cape froward: that he had been on shore at several places, there he had found plenty of wood and water close to the each, with abundance of cranberries and wild celery. He eported also, that he had seen a great number of currant whee full of fruit, though none of it was ripe, and great variety of beautiful shrubs in full blossom, bearing lowers of different colours, particularly red, purple, yellow nd white, besides great plenty of the winter's bark, a grate-If spice which is well known to the botanists of Europe. He shot several wild ducks, geese, gulls, a hawk, and two three of the birds which the sailors call a Race-Horse. Sunday 18. At five o'clock in the morning, we made al, and at noon, being about two miles from the shore, Cape Froward bore N. by E. a bluff point N. N. W. and Cape Holland W. & S. Our latitude at this place, by obevation, was 54° 3' S. and we found the Streight to be bout fix miles wide. Soon after I fent a boat into Snug was ay, to lie at the anchoring place, but the wind coming alk from the land, I stood off again all night; and at a mile row from the shore, we had no ground with 140 fathom.

In the morning of Monday 19. the Swallow having made tity he signal for anchoring under Cape Holland, we ran in, and anchored in 10 fathom, with a clear sandy bottom. deli Upon fending the boats out to found, we discovered that and the were very near a reef of rocks; we therefore tripped go he anchor, and dropped farther out, where we had 12 ealth athom, and were about half a mile from the shore, just unfi popolite to a large stream of water which falls with great apidity from the mountains, for the land here is of a stuand rendous height. Cape Holland bore W. S. W & W. difant two miles, and Cape Froward E. Our latitude, by inds blervation, was 53° 58' S.

The next morning, Tuesday 20. we got off some water, ad great plenty of wild celery, but could get no fish, except a few musiels. I sent off the boats to sound, and found that there was good anchorage at about half a mile from the shore, quite from the Cape to sour miles below it; and close by the Cape a good harbour, where a ship might refresh with more safety than at Port Famine, and avail herself of a large river of fresh water, with plenty o wood celery, and berries; though the place affords no

fish except muffels.

Having completed our wood and water, we failed from this place on Thursday 22. about three o'clock in the ast ternoon. At nine in the evening, the ship being about two miles distant from the shore, Cape Gallant bore W.; N. distant two leagues, Cape Holland E. by N, distant she leagues; Cape Gallant and Cape Holland being nearly in one: a white patch in Monmouth's Island bore S. S. W. W. Rupert's Island W. S. W. At this place the Streight is not more than five miles over; and we found tide which produced a very unusual effect. for it became impossible to keep the ship's head upon any point.

At fix the next morning, Friday 23. the Swallow mad the fignal for having found anchorage; and at eight w anchored in a bay under Cape Gallant, in 10 fathom, with a muddy bottom. The east point of Cape Gallant bore & W. by W. 2 W. the extreme point of the eastermost land E. by S. a point making the mouth of a river N. by W and the white patch on Charles's Island S. W. The boat being fent out to found, found good anchorage every where except within two cables' length S. W. of the ship, when it was coral and deepened to 16 fathom. In the afternoon I fent out the master to examine the bay and a large la goon; and he reported that the lagoon was the most com modious harbour we had yet feen in the Streight, having five fathom at the entrance, and from four to five in the middle; that it was capable of receiving a great number of vessels, had three large fresh water rivers, and plenty of wood and celery. We had here the misfortune to have feine spoiled, by being entangled with the wood that lie funk at the mouth of these rivers; but though we caugh but little fish, we had an incredible number of wild ducks which we found a very good fuccedaneum.

The mountains are here very lofty, and the master of the Swallow climbed one of the highest, hoping that from

fummit he should obtain a fight of the South Sea; but found his view intercepted by mountains still higher on low fouthern shore: before he descended, however, he ethis ded a pyramid, within which he deposited a bottle conining a shilling, and a paper on which was written the y of hip's name, and the date of the year; a memorial which offibly may remain there as long as the world endures.

In the morning of Saturday 24. we took two boats and ron mamined Cordes bay, which we found very much inferior af that in which the ship lay; it had indeed a larger laour soon, but the entrance of it was narrow, and barred by a oal, on which there was not sufficient depth of water for hip of burden to float: the entrance of the bay also was

cky, and within it the ground was foul.

In this place we faw an animal that resembled an als, the sut it had a cloven hoof, as we discovered afterwards by nd macking it, and as swift as a deer. This was the first aniam al we had feen in the Streight, except at the entrance, here we found the guanicoes that we would fain have afficked for with the Indians. We shot at this creature, we at we could not hit it; probably it is altogether unknown

with the naturalists of Europe.

hours, and the indraught should by all means be avoided

The latitude of Cape Gallant road is 53° 50' S.

We continued in this station, taking in wood and water and gathering mussels and herbs, till the morning. Tuel day 27. when a boat that had been fent to try the current returned with an account that it set nearly at the rate of two miles an hour, but that the wind being northerly, we might probably get round to Elizabeth Bay or York Road before night; we therefore weighed with all expedition

At noon on Wednesday 28. the west point of Cape Gal lant bore W. N. W. distant half a mile, and the white patch on Charles's Island S. E. by S. We had fresh gale and heavy flaws off the land; and at two o'clock the we point of Cape Gallant bore E. distant three leagues, and York Point W. N. W. distant five leagues. At five, w opened York Road, the Point bearing N. W. at the dif tance of half a mile: at this time the ship was taken a back and a strong current with a heavy squall drove us so far to leeward. that it was with great difficulty we got into Eli zabeth Bay, and anchored in 12 fathom near a river. The Swallow being at anchor off the point of the bay, and ver near the rocks, I fent all the boats with anchors and hau fers to her affiftance, and at last she was happily warped to windward into good anchorage. York Point now bore W by N. a shoal with weeds upon it W. N. W. at the dil tance of a cable's length, Point Paffage S. E. 1 E. dillan half a mile, a rock near Rupert's Island S & E and a ri vulet on the bay N. E. by E. diftant about three cable length. Soon after fun-fet we faw a great smoke on the fouthern shore, and another on Prince Rupert's Island.

Early in the morning I sent the boats on shore for water, and soon after our people landed, three canoes put of from the south shore, and landed sixteen of the natives of the east point of the bay. When they came within about a hundred yards of our people they stopt, called out, and made signs of friendship; our people did the same, shewing them some beads and other toys. At this they seemed pleased, and began to shout; our people imitated the noise they made, and shouted in return; the Indians then advanced, still shouting and laughing very loud. When the parties met they shook hands, and our men presented the Indians with several of the toys which they had shew

ded tem at a distance. They were covered with seal skins, ich stunk abominably, and some of them were eating ater rotten fiesh and blubber raw, with a keen appetite and at seeming satisfaction. Their complexion was the same that of the people we had seen before, but they were w of stature, the tallest of them not being more than five we take they appeared to be perishing with cold, and im-Road diately kindled feveral fires. How they subsist in winter, tion is not perhaps easy to guess, for the weather was at this ne so severe, that we had frequent falls of snow. They me armed with bows, arrows, and javelins: the arrows and elins were pointed with flint, which was wrought into hape of a serpent's tongue; and they discharged both th great force and dexterity, scarce ever failing to hit a ark at a considerable distance. To kindle a fire they e dil like a peeble against a piece of mundic, holding under it, back eatch the sparks, some moss or down, mixed with a hitish earth, which takes fire like tinder: they then take me dry grass, of which there is every where plenty, and tting the lighted moss into it, wave it to and fro, and in out a minute it blazes.

When the boat returned she brought three of them on ed to and the ship, but they seemed to regard nothing with degree of curiofity except our clothes and a lookingdil sis; the looking-glass afforded them as much diversion it had done the Patagonians, and it seemed to surprise om more: when they first peeped into it they started ck, first looking at us, and then at each other; they en took another peep, as it were by stealth, starting back before, and then eagerly looking behind it: when by grees they became familiar with it, they smiled, and seeing simage smile in return, they were exceedingly delighted, burst into fits of the most violent laughter. They left however, and every thing elfe, with perfect indiffeace, the little they possessed being to all appearance equal their defires. They eat whatever was given them, but old drink nothing but water.

When they left the ship I went on shore with them, and this time several of their wives and children were come the watering place. I distributed some trinkets among em, with which they seemed pleased for a moment, and gave us some of their arms in return; they gave us

alfo

also several pieces of mundie, such as is found in the mines of Cornwall: they made us understand that the found it in the mountains, where there are probably mi of tin, and perhaps of more valuable metal. As this fee to be the most dreary and inhospitable country in the wor not excepting the worst parts of Sweden and Norway, people seem to be the lowest and most deplorable of human beings. Their perfect indifference to every this they faw, which marked the disparity between our & and their own, though it may preserve them from the gret and anguish of unsatisfied desires, seems, notwithsta ing, to imply a defect in their nature; for those who satisfied with the gratifications of a brute, can have li pretension to the prerogatives of men. When they left and embarked in their canoes, they hoisted a seal skin a fail, and steered for the southern shore, where we many of their hovels; and we remarked that not one them looked behind, either at us or at the ship, so li impression had the wonders they had seen made upon the minds, and so much did they appear to be absorbed in present, without any habitual exercise of their power reflect upon the paft.

In this station we continued till Tuesday, February At about half an hour past twelve we weighed, and i fudden squall were taken a back, so as that both ships w in the most imminent danger of being driven ashore of reef of rocks; the wind however suddenly shifted, and happily got off without damage. At five o'clock in the ternoon, the tide being done, and the wind coming ab to the west, we bore away for York Road, and at len anchored in it: the Swallow at the same time being near Island Bay, under Cape Quod, endeavoured to get there, but was by the tide obliged to return to York Ro In this situation Cape Quod bore W. & S. distant 19 mi York Point E. S. E. diftant one mile, Bachelor's R N. N. W. three quarters of a mile, the entrance of Jero Sound N. W. by W. and a small island on the south is W. by S. We found the tide here very rapid and und tain; in the stream it generally fet to the eastward, bu fometimes, though rarely, fet westward fix hours toget This evening we faw five Indian canoes come out of Bad

lor's River, and go up Jerom's Sound.

In the morning, Wednesday 4. the boats which I had ent out to found both the shores of the Streight and all mir arts of the bay, returned with an account that there was ood anchorage within Jerom's Sound, and all the way thier from the ship's station at the distance of about half a of wint, near York Point, at the distance of a cable and a this length from the weeds, in 10 lattions. There were also several places under the islands the ottom. There were a ship might anchor; but the that were and uncertainty of the tides, and the heavy guits of ho and that came off the high lands, by which these situatileft boats returned, I put fresh hands into them, and went cin welf up Bachelor's River: we found a bar at the enve I ance, which at certain times of the tide must be dangeone was. We hauled the seine, and should have caught plenof fish if it had not been for the weeds and stumps of n the ses at the bottom of the river. We then went ashore, in there we saw many wigwams of the natives, and several wer their dogs, who, as foon as we came in fight, ran away. le also saw some ostriches, but they were beyond the uary sich of our pieces: we gathered mussels, limpets, sea-eggs,. di dery, and nettles in great abundance. About three ps we les up this river, on the west side, between Mount Mise: y de another mountain of a stupendous height, there is a and staract which has a very striking appearance: it is precithe lated from an elevation of above four hundred yards; g ab If the way it rolls over a very steep declivity, and the otelen er half is a perpendicular fall. The found of this catang v at is not less awful than the fight. o get

In this place contrary winds detained us till 10 o'clock k Ro the morning of Saturday 14. when we weighed, and in 9 mi Isan hour the current set the ship toward's Bachelor's Jero gabout, which she was long in doing, we drove over a the foal where we had little more than 16 feet water with l und cky ground; so that our danger was very great, for the , bu ip drew 16 feet 9 inches aft, and 15 feet one inch forogeth and: as foon as the ship gathered way, we happily deep-Bac sed into three fathom; within two cables' length we had e, and in a very short time we got into deep water. We VOL. I. continued

continued plying to windward till four o'clock in the a ternoon, and then finding that we had loft ground, w returned to our station, and again anchored in You Road.

Here we remained till five o'clock in the morning, Tue day 17. when we weighed, and towed out of the roa At nine, though we had a fine breeze at west, the sh was carried with great violence to a current towards the fouth shore: the boats were all towing a head, and the fails afleep, yet we drove so close to the rock, that theoa of the boats were entangled in the weeds. In this mann we were hurried along near three quarters of an houre peding every moment to be dashed to pieces against t cliff, from which we were seldom farther than a ship length, and very often not half so much. We sounded both fides, and found that next the shore we had from to 20 fathom, and on the other fide of the ship no bottom as all our efforts were ineffectual, we refigned ourselves our fate, and waited the event in a state of suspense ve little different from despair. At length, however, we pened Saint David's Sound, and a current that rushed of of it fet us into the mid-channel. During all this time t Swallow was on the north shore, and consequently con know nothing of our danger till it was palt. We now le the boats out to look for an anchoring-place : and at no Cape Quod bore N. N. E. and Saint David's head S.

About one o'clock the boats returned, having found anchoring place in a famall bay, to which we gave the na sough of Butler's Bay, it having been discovered by Mr Butle thitan one of the mates. It lies to the west of Rider's Bay the fouth shore of the Streight, which is here about t miles wide. We ran in with the tide which fet fast to westward, and anchored in 16 fathom water. The tremes of the bay from W. by N. to N. 1 W. are bout a quarter of a mile asunder; a small rivulet, at distance of somewhat less than two cables' length, bore W. and Cape Quod N. at the distance of four mi At this time the Swallow was at anchor in Island Bay the north shore, at about fix miles distance.

I now fent all the boats out to found round the ship in the neighbouring bays; and they recurred with an count that they could find no place fit to receive the

In this place we remained till Friday 20. when about oon the clouds gathered very thick to the westward, and esore one it blew a steim, with such rain and hail as we a and scarcely ever seen. We immediately struck the yards the hove the ship up to it: we then let go the small bow-the and veered away, and brought both cables a head: at le same time we carried out two more hausers, and made hem fast to two other rocks, making use of every expediat in our power to keep the ship steady. The gale conin great aftonishment the sea broke quite over the forewhich we were stationed, might well have been thought es possible. Our danger here was very great, for if the ve tables had parted, as we could not run out with a fail, and we had not room to bring the ship up with any other ando for, we must have been dashed to pieces in a few minutes, d in fuch a fituation it is highly probable that every foul col wild immediately have perished; however, by eight o'clock regale was become somewhat more moderate, and gradually no creasing during the night, we had tolerable weather the S. Jat morning, Saturday 21. Upon heaving the anchor, and that the satisfaction to find that our cable was sound, nal sough our hausers were much rubbed by the rocks, not-But thitanding they were parcelled with old hammacoes, and Bay her things. The first thing I did after performing the Swallow to inquire how she had fared during the gale: are the of the gale, but that she had been very near being , in pushing through the Islands two days before, by ore rapidity of the tide: that notwithstanding an alteration mi sich had been made in her rudder, she steered and work-Bay fo ill, that every time they got under way they were apthensive that she could never safely be brought to an annip or again: I was therefore requested, in the name of the an ptain, to confider that she could be of very little service the expedition, and to direct what I thought would be neit

best for the service. I answered, that as the Lords of the Admiralty had appointed her to accompany the Dolphin she must continue to do it as long as it was possible; that as her condition rendered her a bad sailer, I would wait her time, and attend her motions, and that if any disaster should happen to either of us, the other should be ready to

afford fuch affiftance as might be in her power.

We continued here eight days, during which time we completed our wood and water, dried our fails, and fen great part of the ship's company on shore, to wash their clothes and stretch their legs, which was the more necessary, as the cold, snowy, and tempessuous weather had considered them too much below. We caught mussels and limpets, and gathered celery and nettles in great abundance. The mussels were the largest we had ever seen, many of them being from five to six inches long: we caught also great pleuty of a fine, sirm, red sish, not unlike a gurnet, more of which were from four to sive pounds weight. At the same time we made it part of the employment of every day to try the current, which we found constantly setting the eastward.

The matter having been fent out to look for anchoring places, returned with an account that he could find no the ter, except near the shore, where it should not be sough but in cases of the most pressing necessity. He landed pon a large island on the north fide of Snow Sound, at being almost perished with cold, the first thing he did w to make a large fire, with fome small trees which he four upon the spot. He then climbed one of the rocky mou tains, with Mr Pickerfgill, a midshipman, and one of t feamen, to take a view of the Streight, and the dismals gions that furround it. He found the entrance of t Sound to be full as broad as feveral parts of the Streig and to grow but very little narrower, for several miles land on the Terra del Fuego fide. The country on fouth of it was still more dreary and horrid-than any had yet seen: it consisted of craggy mountains, mu higher than the clouds, that were altogether naked for the base to the summit, there not being a single shrub, even a blade of grass to be seen upon them; nor were vallies between them less desolate, being entirely cover with deep beds of fnow, except here and there where

had been washed away, or converted into ice, by the torrents which were precipated from the fissures and crags of
the mountain above, where the snow had been dissolved;
and even these vallies, in the patches that were free from
show, were as destitute of verdure as the rocks between
which they lay.

On Sunday the first of March, at half an hour after four selock in the morning, we saw the Swallow under sail, on the north shore of Cape Quod. At seven we weighed, and stood out of Butler's Bay, but it falling calm, soon sherwards, the boats were obliged to take the vessel in tow, having with much difficulty kept clear of the rocks: the passage being very narrow, we sent the boats, about soon, to seek for anchorage on the north shore. At this sime, Cape Notch bore W. by. N. & N. distant between three and sour leagues, and Cape Quod E. N. distant shree leagues.

About three o'clock in the afternoon, there being little ind, we anchored, with the Swallow, under the north fore, in a small bay, where there is a high, steep, rocky nountain, the top of which resembles the head of a lion, or which reason we called the bay Lion's cove. We had ere 40 fathom, with deep water close to the shore, and thalf a cable's length without the thip, no ground. We int the boats to the westward in search of anchoring-places dat midnight they returned with an account that there as an indifferent bay at the distance of about four miles, ad that Goodluck Bay was three leagues to the westward. At half an hour after 12 the next day, Monday 2. the and being northerly, we made fail from Lion's Cove, and five anchored in Goodluck Bay, at the distance of about alf a eable's length from the rocks, in 28 fathom water. rocky island at the west extremity of the bay bore N. V. by W. distant about a cable's length and a half, and a w point, which makes the eastern extremity of the bay, ore E. S. E. distant about a mile. Between this point nd the ship, there were many shoals, and the bottom of e bay two rocks, the largest of which bore N. E. by N. esmallest N. by E. From these rocks, shoals run out the S. E. which may be known by the weeds that are on them; the ship was within a cable's length of them: hen she swung with her stern in shore, we had fixteen fathom,

fathom, with coral rock; when she swung off, we had so fathom, with fandy ground. Cape Notch bore from u W. by S. & W. distant about one league; and in the in termediate space there was a large lagoon which we could not found, the wind blowing too hard all the while we law After we had moored the ship, we sent two boat to affift the Swallow, and one to look out for anchorage beyond Cape Notch. The boats that were fent to affile the Swallow, towed her into a small bay, where, as the wind was foutherly, and blew fresh, she was in great dan ger, for the Cove was not only small, but full of rocks

and open to the fouth easterly winds.

All the day following, Tuesday 3, and all the night, we to a had hard gales, with a great fea, and much hail and rain where The next morning, Wednesday 4. we had gusts so violent that it was impossible to stand the deck; they brough whole sheets of water all the way from Cape Notch, which was a league diftant, quite over the deck. They did no last more than a minute, but were so frequent, that the Se cables were kept on a constant strain, and there was the greatest reason to fear that they would give way. It was a general opinion that the Swallow could not possibly rid it out, and some of the men were so strongly prepossesse with the notion of her being loft, that they fancied the faw some of her people coming over the rocks towards of HARB ship. The weather continued so bad, till Saturday 7. the both we could fend no boat to enquire after her; but the gal discover being then more moderate, a boat was dispatched about At four o'clock in the morning, which about the same how mind o in the afternoon, returned with an account that the firm by H was fafe, but that the fatigue of the people had been it tive eredible, the whole crew having been upon the deck ne light i three days and three nights. At midnight the gusts rook f turned, though not with equal violence, with hail, see buld and snow. The weather being now extremely cold, a light the people never dry, I got up, the next morning, Sunda At 8. eleven bales of thick woollen stuff, called Fearnough wallo which is provided by the government, and fet all the ta ff and lors to work to make them into jackets, of which ever reat ! man in the thip had one.

I ordered these jackets to be made very large, allowing fed n one with another, two yards and thirty-four inches of thented; with to each jacket. I fent also seven bales of the same doth to the Swallow, which made every man on board a acket of the same kind; and I cut up three bales of a mer cloth, and made jackets for the officers of both ships, thich I had the pleasure to find were very acceptable.

In this fituation we were obliged to continue a week. during which time, I put both my own ship, and the Swalby upon two thirds allowance, except brandy; but contined the breakfast as long as greens and water were plenty. On Sunday 15. about noon, we faw the Swellow under cks fail, and it being calm, we fent our launch to affift her, In the evening the launch returned, having towed her into a very good harbour on the fouth shore, opposite to rain where we lay. The account that we received of this harlent four, determined us to get into it as foon as possible; the igh text morning therefore, at eight o'clock, we failed from hic Goodluck Bay, and thought ourselves happy to get safe no out of it. When we got a breast of the harbour where the Swallow lay, we fired several guns, as signals for her the loats to assist us in getting in; and in a short time the was master came on board us, and piloted us to a very commorid lious station, where we anchored in 28 fathom, with a fesse middy bottom. This harbour, which is sheltered from all the winds, and excellent in every respect, we called SWALLOW HARBOUR. There are two channels into it, which are the oth narrow, but not dangerous, as the rocks are eafily

about At nine o'clock the next morning, Monday 16. the how wind coming easterly, we weighed, and failed from Swalthe five, there being little wind, we cast off the tow. At ight in the evening, the boats which had been sent ont to As rook for anchorage, returned with an account that they flet would find none: at nine we had fresh gales, and at mid-

d, at light Cape Upright bore S. S. W. 1 W.

and At seven the next morning, Tuesday 17. we took the ough wallow again in tow, but was again obliged to cast her he ta f and tack, as the weather became very thick, with a eve reat swell, and we saw land close under our lee. As no lace for anchorage could be found, Captain Carteret adowin filed me to bear away for Upright Bay, to which I conof thented; and as he was acquainted with the place, he went

a head: the boats were ordered to go between him and the shore, and we followed. At eleven o'clock, there being little wind, we opened a large lagoon, and a current set ting strongly into it, the Swallow was driven among the breakers close upon the lee shore: to aggravate the mission tune, the weather was very hazy, there was no anchorage and the surf ran very high. In this dreadful situation she made signals of distress, and we immediately sent ou launch, and other boats, to her assistance: the boats tool her in tow, but their utmost efforts to save her would have been inessectual, if a breeze had not suddenly come down from a mountain, and wasted her off.

As a great swell came on about noon, we hauled ove to the north shore. We soon found ourselves surrounde with islands, but the fog was so thick, that we knew no where we were, nor which way to steer. Among the islands, the boats were sent to cast the lead, but no anchorage was to be found; we then conjectured that we were in th Bay of Islands, and that we had no chance to escape ship wreck, but by hauling directly out: this, however, wa no easy task. for I was obliged to tack almost continually to weather some island or rock. At four o'clock in the afternoon, it happily cleared up for a minute, just to she us Cape Upright, for which we directly steered, and half an hour after five anchored, with the Swallow, in the bay. When we dropped the anchor, we were in 24 fe thom, and after we had veered away a whole cable, in 40 with a muddy bottom. In this fituation, a high bluff of the north shore bore N. W. & N. distant five leagues, and small island within us S. by E. & E. Soon after we ha anchored, the Swallow drove to leeward, notwithstanding the had two anchors a head, but was at last brought u in 70 fathom, about a cable's length a-stern of us. four o'clock in the morning I fent the boats, with a con fiderable number of men, and fome haufers and anchor on board her, to weigh her anchors, and warp her up windward. When her best bower anchor was weighed, was found entangled with the small one; I therefore four it necessary to send the stream cable on board, and the sh was hung up by it. To clear her anchors, and warp her in a proper birth, cost us the whole day, and was not at la effected without the utmost difficulty and labour.

On Wednesday 18 we had fresh breezes, and sent the oats to sound cross the Streight. Within half a mile of he ship, they had 40, 45, 50, 70, 100 fathom, and then ad no ground, till within a cable's length of the see shore, here they had 90 fathom. We now moored the ship in a fathom with the stream anchor.

The next morning, Thursday 19. while our people ere employed in getting wood and water, and gathering dery and mussels, two canoes, full of Indians, came angside of the ship. They had much the same appearance the poor wretches whom we had feen before in Elizath's Bay. They had on board some seal's flesh blubber, ad penguins, all which they eat raw. Some of our penk, who were fishing with a hook and line, gave one of em a fish, somewhat bigger than a herring, alive, just as came out of the water. The Indian took it hastily, as dog would take a bone, and instantly killed it, by giving abite near the gills: he then proceeded to eat it, begining with the head, and going on to the tail, without reding either the bones, fins, scales, or entrails. They nevery thing that was given them, indifferently, wheer falt or fresh, dressed or raw, but would drink nothing it water. They shivered with cold, yet had nothing to over them but a seal skin, thrown loosely over their shoulers, which did not reach to their middle; and we obserd that when they were rowing, they threw even this by, ad fat stark naked. They had with them some javelins, udely pointed with bone, with which they used to strike als, fish, and penguins, and we observed that one of them ad a piece of iron, about the fize of a common chiffel, hich was fastened to a piece of wood, and seemed to be tended rather for a tool than a weapon. They had all neeyes, which we imputed to their fitting over the smoke their fires, and they smelt more offensively than a fox, hich perhaps was in part owing to their diet, and in part their nastiness. Their canoes were about fifteen feet ng, three broad, and nearly three deep: they were made the bark of trees, sewn together, either with the sinews some beast, or thongs cut out of a hide. Some kind frush was laid into the seams, and the outside was smeared ith a rosin, or gum, which prevented the water from aking into the bark. Fifteen slender branches, bent

into an arch, were fewed transeversely to the bottom and sides, and some streight pieces were placed across the top, from gunwale to gunwale, and securely lashed at each end: upon the whole, however, it was poorly made, no had these people any thing among them in which then was the least appearance of ingenuity. I gave them a hat chet or two, with some beads, and a few other toys, with which they went away to the southward, and we saw no more of them.

While we lay here, we fent the boats, as usual, in search of anchoring-places, and having been 10 leagues to the westward, they found but two: one was to the westward of Cape Upright, in the Bay of Islands, but was very dif ficult to enter and get out of; the other was called Dolphin Bay, at 10 leagues distance, which was a good harbour with even ground in all parts. They faw several small coves, which were all dangerous, as in them it would be necessary to let go the anchor within half a cable's length of a lee-shore, and steady the ship with hansers fastened to the rocks. The people belonging to one of the boats, fpen a night upon an island, upon which, while they were there fix canoes landed about thirty Indians. The Indians rat immediately to the boat, and were carrying away even thing they found in her: our people discovered what the were doing, just time enough to prevent them. As foor as they found themselves opposed, they went to their ca noes, and armed themselves with long poles, and javelin pointed with the bones of fish. They did not begin a attack, but stood in a threatening manner: our people who were two and twenty in number, acted only on the defensive, and by parting with a few trifles to them, the became friends, and behaved peaceably the rest of the time they staid.

For many days, we had hail, lightning, rain, and hard gales, with a heavy sea, so that we thought it impossible for the ship to hold, though she had two anchors a head and two cables an end. The men, however, were sen frequently on shore for exercise, which contributed greath to their health, and procured an almost constant supply of mussels and greens. Among other damages that we had sustained, our fire-place was broken to pieces, we therefor found it necessary to set up the forge, and employ the ar

ourers to make a new back; we also made lime of burnt ells, and once more put it into a useful condition.

On Monday 30. We had the first interval of moderate eather, and we improved it in drying the fails, which, bough much mildewed, we had not before been able to ofe, for fear of fetting the ship adrift: we also aired the pare sails, which we found much injured by the rats, and aployed the fail-makers to mend them. Captain Carteret ring represented that his fire place, as well as ours, had to broken to pieces, our armourers made him also a new ick, and fet it up with lime that we made upon the spot, the same manner as had been done on board our own if hip. This day we saw several canoes, full of Indians, put hir hore on the east side of the bay, and the next morning our reral of them came on board, and proved to be the same nal at our people, who were out in the boat, had met with shore. They behaved very peaceably, and we dismissed gth em with a few toys, as usual.
The day following, Wednesday April 1. several other

dians came off to the ship, and brought with them some ere the birds called Race Horses. Our people purchased rat birds for a few trifles, and I made them a present of ver heral hatchets and knives.

the On Thursday, 2. the master of the Swallow, who had foot en sent out to feek for anchoring places, returned, and cal ported that he had found three on the north shore, which elin me very good; one about four miles to the eawstard of n at tape Providence, another under the east-side of Cape Taople in, and the third about four miles to the eastward of it;
the the said that he found no place to anchor under Cape

the widence, the ground being rocky.

This day two canoes came on board, with four men d three young children in each. The men were fomehard hat more decently dreffed than those that we had seen fible fore, but the children were stark naked. They were nead mewhat fairer than the men, who seemed to pay a very sen ader attention to them, especially in lifting them in and eath tof the canoes. To these young visitors I gave necklay o sand bracelets, with which they seemed mightily pleased. had happened that while some of these people were on board, for d the rest waiting in their canoes by the ship's side, the e ar at was sent on shore for wood and water. The Indians

who were in the canoes, kept their eyes fixed upon the be while she was manning, and the moment she put off fro the ship, they called out with great vociferation to the that were on board, who seemed to be much alarmed, a hastily handing down the children, leaped into their cano without uttering a word. None of us could guess at 1 cause of this sudden emotion, but we saw the men in t canoes pull after the boat with all their might, hallooing a shouting with great appearance of perturbation and diffre The boat out-rowed them, and when she came near shore, the people on board discovered some women gath ring mussels, among the rocks. This at once explain the mystery; the poor Indians were afraid that the stra gers, either by force or favour, should violate the prerog tive of a husband, of which they seemed to be more jeale than the natives of some other countries, who in their a pearance are less savage and fordid. Our people, to ma them easy, immediately lag upon their oars, and suffer the canoes to pass them. The Indians, however, continued to call out to their women, till they took alarm and ran out of fight, and as foon as they got to lar drew their canoes upon the beach, and followed them w the utmost expedition.

We continued daily to gather mussels till Sunday when several of the people being seized with slues, the s geon desired that no more mussels might be brought in

the ship.

The weather being still tempessuous and unsettled we mained at anchor till 10 o'clock in the morning. Friday and then, in company with the Swallow, we made sail noon, Cape Providence bore N. N. W distant four or miles: at sour in the afternoon Cape Tamar bore N. W. W. W. W. distant three leagues, Cape Upright E. S. E. distant three leagues, and Cape Pillar W distant 10 leagues We steered about W. In N. all night, and at six in morning, Saturday 11. had run eight and thirty miles the log. At this time Cape Pillar bore S. W. distant a mile, and the Swallow was about three miles as so of us. At this time there being but little wind, we wooliged to make all the sail we could, to get without Streight's mouth. At 1 o'clock I would have shorter sail for the Swallow, but it was not in my power, for a

for the Swallow, but it was not in my power, for as a ment fet us strongly down upon the Isles of Direction, and wind came to the west, it became absolutely necessary me to carry sail, that I might clear them. Soon after lost sight of the Swallow, and never saw her afterwards. thirst I was inclined to have gone back into the Streight, ta sog coming on, and the sea rising very sast, we were of opinion that it was indispensably necessary to get an ing as soon as possible; for except we pressed the ship with herore the sea rose too high, it would be impracticable her to weather Terra del Fuego on one tack, or Cape shory on the other. At noon, the Islands of Direction m. N. 21' W. distant three leagues, Saint Paul's cupola al Cape Victory in one, N. distant seven leagues, and me Pillar E. distant six leagues.

Our latitude, by observation, was 52° 38', and we mputed our longitude to be 76° W.

Thus we quitted a dreary and inhospitable region, where were in almost perpetual danger of shipwreck for near months, having entered the Streight on the 17th of cember 1766, and quitted it on the 11th of April 67; a region where, in the midst of summer, the wear was cold, gloomy, and tempestuous, where the profes had more the appearance of a chaos than of Nature, I where, for the most part, the vallies were without here, and the hills without wood.

## CHAP. III.

particular Account of the Places in which we anchored duting our Passage through the Streight, and of the Shoals and Rocks that lie near them.

AVING cleared the Streight, we steered a western course. But before I continue the narrative of our age, I shall give a more particular account of the several ces where we anchored, plans of which are deposited in Admiralty Office for the use of suture navigators, with Vol. I.

the shoals and rocks that lie near them, the latitude, lo

gitude, tides, and variation of the compass.

Cape is a good harbour, when the wind is westerly. The is a shoal lying off the Cape, but that may easily be known by the rock weed that grows upon it: the Cape is a stee white cliff, not unlike the South Foreland. Its latitude by observation, is 52° 24' S. and its longitude, by account 68° 22' W. The variation of the needle, by the mediate of sive azimuths and one amplitude, was 24° 3c' E. this place we saw no appearance either of wood or wath We anchored in 10 sathom, with coarse sandy ground, bout a mile from the shore, Cape Virgin Mary bearing by W. ½ W. distant about two miles, and Dungen Point S. S. W. distant sour miles. We anchored here the 17th of December, and sailed the next day. There good landing, on a fine sandy beech, all along the shore

II. POSSESSION BAY. In failing into this be it is necessary to give the point a good birth, because the is a reef that runs right off it about a short mile. I foundings are very irregular all over the bay, but ground is every where a fine soft mud and clay, so that cables can come to no damage. The Point lies in lating 52° 23' S., longitude, by account, 68° 57' W.: the riation is two points easterly. In the bay the tide is and falls between four and five fathom, and runs at trate of about a mile in an hour; in the mid channel thout the bay, it runs nearly three miles an hour. In place we saw no appearance either of wood or water. I landing appeared to be good, but we did not go on the We anchored here on the 19th of December, and sai again on the 22d.

III. PORT FAMINE. At this place, the Spania in the year 1581, built a town, which they called Phill peville, and left in it a colony, confisting of 400 performed when our celebrated navigator, Cavendish, arrived here 1587, he found one of these unhappy wretches, the of one that remained, upon the beach: they had all periformed want of subsistence, except twenty-four; twenty-the of these set out for the river Plata, and were never as wards heard of. This man, whose name was Hernan was brought to England by Cavendish, who called

P

hee where he had taken him up, Port Famine. It is a my fine bay, in which there is room and conveniency for any ships to moor in great safety. We moored in nine thom, having brought Cape St Anne N. E. by E. and edger River S. 1 W. which perhaps is the best situation, bough the whole bay is good ground. In this place there tuc very good wooding and watering; we caught many our fe small fish with a hook and line off the ship's side, and uled the seine with great success, in a fine sandy bay, little to the fouthward of Sedger River: we also shot a reat number of birds, of various kinds, particularly geefe, ucks, teal, snipes, plover, and race-horses, and we found ild celery in great plenty. The latitude of this place is 1º 42' S., longitude, by observation, 71° 28' W.: the mation is two points easterly. We anchored here the 7th of December, 1766, and sailed again the 18th of muary 1767.

IV. CAPE HOLLAND BAY. There is no danr in failing into this bay, and there is good anchoringwund in every part of it. We lay at about three cables' agth from the shore, in 10 fathom, the ground coarse and shells, Cape Holland bearing W. S. W. 1 W. fant three miles, Cape Froward a little to the N. of the Right a-breast of the ship there was a very fine rivut, and close under Cape Holland a large river, navigable boats many miles: the shore also affords fire wood in

nat plenty. We found abundance of wild celery and unberries, mussels and limpets, but caught very little h, either with hook and line, or the seine. We killed me geefe, ducks, teal, and race-horses, but they were of pleney. This bay lies in latitude 53° 57' S., longide, by account, 72° 34' we the variation is two points Merly. The water rose about eight feet; we found, owever, no regular tide, but for the most part a strong ment setting to the eastward. We anchored here on the oth of January, and sailed again on the 23d.

V. CAPE GALLANT BAY. In this bay, which y be entered with great fafety, there is a fine large laon, where a fleet of ships may moor in perfect security. here is a depth of four fathom in every part of it, with loft muddy ground. In the bay, the best anchoring is the east side, where there is from six to ten fathom.

Q 2

Here

Here is good watering from two rivers, and plenty of wood. The lagoon abounded with wild fowl, and w found wild celery, mussels, and limpets in plenty. W did not haul the seine, having torn one to pieces, and th other being unpacked, but if we had, there is reason t believe that we should have been well supplied with fift The landing is good. The latitude of the bay and lagoo is 53° 50' S., longitude by account, 73° 9' W.; the va riation is two points easterly. I observed the water to ri and fall about nine feet, but the tide was very irregular We anchored here the 23d of January, and sailed again th 28th.

VI. ELIZABETH's BAY. At the entrance of the bay there are two small reefs, which appear above water The most dangerous lies off the east point of the bay, bu this may easily be avoided, by keeping at the distance of about two cables' length from the point. There is goo landing all round the bay, but it is much exposed to the westerly winds. The best place for anchoring is Passage Point, at half a mile distance, bearing S. E. and the rive bearing N. E. by E. distant three cables' length; in the situation, a bank or shoal, which may be known by the weeds, bears W. N. W. distant a cable's length: th ground is coarse sand, with shells. Sufficient wood is be procured here for the use of ships, and there is god watering at a small river. We found a little celery and few cranberries, but neither fish nor fowl. The latitud of this place is 53° 43' S., the longitude, by account, 73 24' W.; the variation is two points easterly. We anche 1.; t red here the 29th of January, and sailed the 4th of Fe ruary.

VII. YORK ROAD. The carry danger of failing into the bay, that is formed by two points in this road, rifes from a reef that runs off to about a cable's length fro the western point, which once known, may be easily avoid ed. To anchor in this bay, it is fafelt to bring York Poil E. S. E. Bachelor's River N. by W. 1 W. the west poi of the bay or reef N. W. I W. and St Jerom's Sound V N. W. at the distance of half a mile from the shore. The is good watering about a mile up Bachelor's River, at good wooding all round the bay, where the landing is, all parts, very good. We found plenty of celery, cra

VIII. BUTLER's BAY. This is a small bay, entires forrounded by rocks, fo that no ship should anchor here the can possibly avoid it. We found, however, sufficient good and water to keep up our stock, mussels and limpets plenty, some good rock fish, and a few wild fowl, but by there and cranberries were very scarce. This bay lies in e de titude 53° 37' S., longitude, by account, 74° 9' W.; the variation is two points easterly. The water rifes and Mag be eastward. We anchored here the 18th of February, rive and failed the first of March.

th IX. LION CONE. This is a small bay, and surrounthe by rocks. The water is deep, but the ground is the bod. It is not a bad place for one ship, nor a good one is to two. Here is good watering up a small creek, but no good bod. There is good landing at the watering place, but and where else. We found no refreshment but a few must itue es, limpets, and rock-fish, with a little celery. The , 7; stitude is 53° 26' S., longitude, by account, 74° 25' nche .; the variation was two points eafterly. The water, as Fell was we could judge by the appearance of the rocks, rifes nd falls about five feet, and the current fets at the rate of out two knots an hour. We anchored here on the 2d March, and failed the next day. fro

X. GOOD-LUCK BAY. This is a small bay, and like teral others in this Streight, entirely furrounded by rocks. Poi he ground is very coarse, and the cable of our best bowanchor was fo much rubbed, that we were obliged to ondemn it, and bend a new one. At this place there is little wood, and plenty of good water, but the rocks oder it very difficult of access. No man that sees this nt of the coast, can expect to find any kind of rethment upon it; and indeed we caught nothing except

a few rock fish, with hook and line. There may be circumstances in which it may be good luck to get into the bay, but we thought it very good luck to get out of it It lies in latitude 53° 23' S., longitude, by account, 74 33' W.; the variation is two points easterly. The water rises and falls between three and four feet, though, whenever we had an opportunity of trying the current, we foun it run easterly. We anchored here the third of March

and failed the 15th.

XI. SWALLOW HARBOUR. This harbour when once entered, is very safe, being sheltered from a winds, but the entrance is narrow and rocky; the rocks however, may be easily avoided by keeping a good look out, as there are large bunches of rock-weed upon the all. We found here a sufficient supply of wood and wa ter, the wood however was very small. As the water constantly smooth here, the landing is every where good but we found no supply of provisions, except a few musse and rock-fish. The mountains round it have the most ho rid appearance, and seem to be altogether deserted by ev ry thing that has life. The latitude is 53° 29' S., the lor gitude, by account, 74° 35' W,; the variation is tw points easterly, and the tide rises and falls between for and five feet. We anchored here the 15th of March, an left the place the next day.

XII. UPRIGHT BAY. This bay may be safely entered, as there is no obstruction but what is above water The wood here is very small, but we found sufficient to keep up our stock. The water is excellent, and in great plet ty. As to provisions, we got only a few wild fowl, rock sishes, and mussels. The landing is bad. The latitude this place is 53° 8' S., longitude 75° 35' W.; the variation two points easterly. The water rises and falls about five feet, but the tide or current is very irregular. Wanchored here on the 18th of March, and sailed again of

the 10th of April.

There are three very good bays a little beyond Car Shutup, which we called RIVER BAY, LODGING BAY, at

WALLIS'S BAY. Wallis's Bay is the best.

About half way between Elizabeth's Bay and You Road, lies Muscle Bay, where there is very good anch rage with a westerly wind. There is also a bay, with go anchorage

nchorage, opposite to York Road, and another to the alward of Cape Cross-tide, but this will hold only a single hip. Between Cape Cross and Saint David's Head, lies Saint David's Sound, on the south side of which we found bank of coarse fand and shells, with a depth of water from 19 to 30 fathom, where a ship might anchor in case frecessity; and the master of the Swallow found a very good small bay a little to the eastward of St David's Head. Alittle to the eastward of Cape Quod, lies Island Bay, there the Swallow lay some time, but it is by no means an ligible situation. The ground of Chance Bay is very ocky and uneven, and for that reason should be avoided. As all the violent gales by which we suffered in this naigation, blew from the westward, it is proper to stand awa wout a hundred leagues or more to the westward, after sailer gout of the Streight, that the ship may not be endanood pered on a lee-shore, which at present is wholly unknown. The following table shews the courses and distances, how from point to point, in the Streight of Magellan, by comals.

Snug Bay Point to Cape Holland

## CHAP. IV.

The Passage from the Streight of Magellan, to King Geo the Third's Island, called Otabeite, in the South Sea, w an Account of the Discovery of several other Islands, and Description of their Inhabitants.

CUNDAY 12. As we continued our course to the we D ward, after having cleared the Streight, we faw a gr number of gannets, sheerwaters, pintado-birds, and ma others, about the ship, and had for the most part stro gales, hazy weather, and heavy feas, so that we were f quently brought under our courses, and there was no dry place in the ship for some weeks together.

At eight in the morning of Wednesday 22. we had observation, by which we found our longitude to be o 46' W. and at noon, our latitude was 42° 24' S. and

variation, by azimuth, 11° 6' E.

By Friday 24. The men began to fall down very fall colds and fevers, in confequence of the upper works be open, and their clothes and beds continually wet.

On Sunday 26. At four in the afternoon, the variati by azimuth, was 10° 20' E. and at fix in the morning the next day, it was 9° 8' E. Our latitude, on Mond 27. at noon, was 36° 54' S. our longitude, by accou 100° W. This day, the weather being moderate and f we dried all the people's clothes, and got the fick up deck, to whom we gave faiop, and wheat boiled with p able loup, every morning for breakfast, and all the shi company had as much vinegar and mustard as they co use; portable soup was also constantly boiled in their pe and oatmeal.

The hard gales, with frequent and violent fqualls, an heavy sea, soon returned, and continued with very little termission. The ship pitched so much, that we were as she would carry away her masts, and the men were ag wet in their beds.

On Thursday 30. The variation, by azimuth, was 30' E. our latitude was 32° 50'; longitude, by accou 100' W. I began now to keep the ship to the northwa as we had no chance of getting westing in this latitu

raing The wor

furgeon was of opinion, that in a little time the fick old so much increase, that we should want hands to work ship, if we could not get into better weather.

On Sunday, May 3. About four in the afternoon, we an observation of the sun and moon, by which we not our longitude to be 96° 26' W. the variation by the muth was 5° 44' E. at six in the evening, and at six enext morning, Monday 4. it was 5° 58' E. Our latite, this day at noon, was 28° 20' S. At sour in the emoon, we had several observations for the longitude, found it to be 96° 21' W.; at seven in the evening, variation was 6° 40' E. by the azimuth, and the next ming, Tuesday 6. at ten it was, by amplitude, 5° 48' E.; three in the afternoon, the variation, by amplitude, was 40' E. This day we saw a tropic bird.

At fix o'clock in the morning, Friday 8. the variation the needle, by amplitude, was 7° 11' E. In the afterm we faw feveral sheerwaters and sea-swallows. At thin the morning, Saturday 9. the variation by azimuth 16° 34' E. and in the morning, Monday 11. by azimuth 1 amplitude, it was 4° 40' E. Our latitude was 27° 8. longitude, by account 106° W. This day, Tuestand the next we saw several sea swallows, sheerwa-

, and porpoifes, about the ship.

In Thursday 14. The variation, by sour azimuths, was E. About sour o'clock in the asternoon, we saw a select soft brown birds, slying to the eastward, and ething which had the appearance of high lands in the equarter. We bore away for it till sunsset, and it having the same appearance, we continued our course; tat two in the morning, having run 18 leagues without ling it, we hauled the wind, and at day light nothing to be seen. We had now the satisfaction to find our ag people mend apace. Our latitude was 24° 50' S. longitude, by account, 106° W. During all this e, we were looking out for the Swallow.

At four in the afternoon of Saturday 16. the variation, azimuth and amplitude, was 69 E. and at fix the next ming, Sunday 17. by four azimuths, it was 3° 20'. The carpenters were now employed in caulking the upworks of the ship, and repairing and painting the boats,

and on Monday 18. I gave a sheep among the people th

were fick and recovering.

On Wednesday 20. We found our longitude, by obsevation, to be 106° 47' W.; and our latitude 20° 52' 8 The next day, Thursday 21. we saw several flying fish, whi were the first we had seen in these seas.

On Friday 22. Our longitude, by observation, was (1) W., and our latitude 20° 18' S.; and this day we say

fome bonettoes, dolphins, and tropic birds.

The people who had been recovering from colds and vers now began to fall down in the scurvy, upon which the surgeon's representation, wine was served to then wort was also made for them of malt, and each man half a pint of pickled cabbage every day. The variation from 4 to 5° E.

28. we saw another, and the next day, Friday 29. seven birds, among which was one about the size of a Swallow

which some of us thought was a land bird.

Our men now began to look very pale and fickly, a to fall down very fast in the scurvy, notwithstanding our care and attention to prevent it. They had vineg and mustard without limitation, wine instead of spirit sweet wort and salop. Portable soup was still constant boiled in their pease and oatmeal; their birth and cloth were kept perfectly clean; the hammocks were constant brought upon the deck at eight o'clock in the mornin and carried down at four in the afternoon. Some of the beds hammocks were washed every day; the water we rendered wholesome by ventilation, and every part between decks frequently washed with vinegar.

On Sunday 31. Our longitude, by observation, was 12' 45' W., our latitude 29° 38' S., and the variation, by at

muth and amplitude, 5° 9' E.

The next day, Monday, June 1. at three in the afternoon, our longitude, by observation, was 129° 15' Wour latitude 19° 34' S. We had squally weather, with much lightening and rain, and saw several man of whirds.

On Wednesday 3. we saw several gannets, which, wi the uncertainty of the weather, inclined us to hope th land was not very far distant. The next day, Thursday

turtle swam close by the ship; on Friday 5. we saw many ds, which confirmed our hope that some place of rechment was near, and at 11 o'clock in the forenoon, Sarday 6. Jonathan Puller, a seaman, called out from the alt-head, " Land in the W. N. W." At noon it was m plainly from the deck, and found to be a low island, 11 about five or fix leagues distance. The joy which every on board felt at this discovery, can be conceived by ofe only who have experienced the danger, fickness, and

diffigue of such a voyage as we had performed. ch When we were within about five miles of this island, we nen vanother, bearing N. W. by W. About three o'clock he the afternoon, being very near the island that was first atic Covered, we brought to, and I fent Mr Furneaux, my med lieutenant, my first lieutenant being very ill, with rid boats manned and armed, to the shore. As he apever meched it, we saw two canoes put off, and paddle away illo the great expedition towards the island that lay to leend. At seven in the evening the boats returned, and and a considerable and a considerable and a considerable and antity of scurvy-grass; they brought also some sistements at were made of oyster-shells, and some of the shells of hich they were made. They reported that they had seen me of the inhabitants, but had visited three huts, or raloth a sheds, consisting only of a roof, neatly thatched with tant wa-nut and palm leaves, supported upon posts, and open rain fround. They saw also several canoes building, but and no fresh water, nor any fruit but cocoa nuts. They maded, but found no anchorage, and it was with great twee ficulty that they got on shore, as the surf ran very high. aving received this account, I stood off and on all night, 127 d early the next morning, Whitfunday 7. I fent the by az out again to found, with orders, if possible, to find place where the ship might come to an anchor; but at afte o'clock they returned, with no better success than bethe people told me that the whole island was furunded by a reef, and that although on the weather fide the island there was an opening through it, into a large ion, that extended to the middle of the island, yet they and it so full of breakers, that they could not venture in; ither indeed had they been able to land on any part of

island, the furf running still higher than it had done the

day before. As it would therefore answer no purpose continue here, I hoisted the boats in, and stood away so the other island, which bore S. 22° E. distant about so leagues. The island which I now quitted, having bed discovered on Whitsun-eve, I called it Whitsun Island It is about four miles long, and three wide. Its latitud is 19° 26' S., and its longitude, by observation 137° 5 W.

When we came under the lee of the island, I sent Lie tenant Furneaux, with the boats manned and armed, the shore, where I saw about sifty of the natives armowith long pikes, and several of them running about with sire-brands in their hands. I ordered Mr Furneaux to get to that part of the beach where we saw the people, and endeavour to traffic with them for fruit and water, or what wer else might be useful; at the same time being particularly careful to give them no offence. I ordered him alto employ the boats in sounding for anchorage. About seven o'clock he returned, and told me that he could find no ground with the line, till he came within half a cable length of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore, and that there it consisted of shall ength of the shore.

rocks, and lay very deep.

As the boat approached the shore, the Indians thron ed down towards the beach, and put themselves upon the guard with their long pikes, as if to dispute landing. O men then lay upon their oars, and made figns of frien ship, shewing at the same time several strings of beads, riban knives, and other trinkets. The Indians still made sig to our people that they should depart, but at the san time eyed the trinkets with a kind of wishful curiosit Soon after, some of them advanced a few steps into t fea, and our people making figns that they wanted coco nuts and water, some of them brought down a small qua tity of both, and ventured to hand them into the boa the water was in cocoa nut shells, and the fruit was stri ped of its outward covering, which is probably used for rious purposes. For this supply they were paid with t trinkets that had been shewed them, and some nails, up which they seemed to set a much greater value. During the traffic, one of the Indians found means to steal a filk han kerchief, in which some of our small merchandise w wrapped up, and carried it clear off, with its contents, dexteroul

steroully, that nobody observed him. Our people made y fe signs that a handkerchief had been stolen, but they either ould not, or would not understand them. The boat conbee fined about the beach, founding for anchorage, till it ANI as dark; and having many times endeavoured to perfuade itude natives to bring down some scurvy-grass, without suc-

I flood off and on with the ship all night, and as soon Lies othe day broke, Monday 8. I sent the boats again, with d, ders to make a landing, but without giving any offence rme the natives, that could possibly be avoided. When our wil wits came near the shore, the officer was greatly surprised to g lee seven large canoes, with two stout masts in each, lyhat ady to embark. They made figns to our people to go igher up; they readily complied, and as soon as they al alterntashore, all the Indians embarked, and sailed away to bo lewestward, being joined by two other canoes at the fin est end of the island. About noon, the boats returned, able den with cocoa-nuts, palm-nuts, and scurvy-grass. Mr umeaux, who commanded the expedition, told me that the idians had left nothing behind them but four or five caron des. He found a well of very good water, and described the kisland as being sandy and level, full of trees, but wi-O bout underwood, and abounded with scurvy grass. The ien moes, which steered about W. S. W. as long as they ban mild be seen from the mast-head, appeared to be about fig hirty feet long, four feet broad, and three and an half fan hep. Two of these being brought along side of each oher, were fastened together, at the distance of about three tet asunder, by cross beams, passing from the larboard unwale of one, to the starboard gunwale of the other, in qua he middle and near to each end.

The inhabitants of this island were of a middle stature, nd dark complexion, with long black hair, which hung whe over their shoulders. The men were well made, and he women handsome. Their clothing was a kind of coarse doth or matting, which was fastened about their middle, nd feemed capable of being brought up round their shoul-

ty men, who were to make a rolling way for getting the calks down to the beach from the well. I gave orders the he should take possession of the island, in the name of kin George the Third, and give it the name of QUEEN CHAI LOTTE'S ISLAND, in honour of her Majesty. The boa returned freighted with cocoa-nuts and scurvy-grass, an the officer told me that he had found two more wells good water, not far from the beach. I was at this tin very ill, yet I went ashore with the surgeon, and sever of the people, who were enfeebled by the scurvy, to tal a walk. I found the wells so convenient, that I left the mate and twenty men on shore to fill water, and ordered week's provisions to be fent them from the ship, they b ing already furnished with arms and ammunition. In the evening I returned on board, with the surgeon and the fick, leaving only the waterers on shore. As we had no been able to find any anchorage, I stood off and on

night.

In the morning, Tuesday 9. I sent all the empty wat casks on the shore: the surgeon and the sick were also se for the benefit of another airing, but I gave them firich o ders that they should keep near the water-side, and in the shade; that they should not pull down or injure any of the houses, nor, for the fake of the fruit, destroy the coc trees, which I appointed proper persons to climb. A noon, the rolling way being made, the cutter returns laden with water, but it was with great difficulty got o the beach, as it is all rock, and the furf that breaks upo it, is often very great. At four, I received another boa load of water, and a fresh supply of cocoa-nuts, palm nuts, and scurvy-grass; the surgeon also returned with th fick men, who received much benefit from their wall The next morning, as foon as it was light, Wednesday is I dispatched orders to the mate, to send all the water that was filled on board, and to be ready to come off with h people when the boats should return again, bringing wit them as many cocoa nuts, and as much scurvy-grass, they could procure. About eight o'clock, all the boat and people came on board, with the water and refrest ments, but the cutter, on coming off, shipped a sea, which almost filled her with water: the barge was happily nea enough to affift her, by taking great part of her crew o board th

and, while the rest freed her, without any other damage in the loss of the cocoa nuts, and greens that were on ard. At noon, I hoisted the boats in, and there being great sea, with a dreadful surf rolling in upon the shore, in an anchorage, I thought it prudent to leave this place in such refreshments as we had got. The people who is dressed on shore, saw no appearance of metal of any ind, but several tools, which were made of shells and mes, sharpened and sitted into handles, like adzes, chisting, and awls. They saw several canoes building, which formed of planks, sewed together, and sastened to semissimal timbers, that pass transversely along the bottom of up the sides. They saw several repositories of the dead, which the body was lest to pute fry under a canopy, and apput into the ground.

When we failed, we left a union jack flying upon the island, with the ship's name, the time of our being me, and an account of our taking possession of this place, whitsun Island, in the name of his Britannic Majesty, ton a piece of wood, and in the bark of several trees. It also left some hatchets, nails, glass bottles, beads, llings, sixpences, and half pence, as presents to the names, as an atonement for the disturbance we had given mem. Queen Charlotte's Island is about six miles long, and one mile wide, lies in latitude 19° 18' S., longitude, pobservation, 138° 4' W.; and we found the variation

We made fail with a fine breeze, and about one o'clock, wan island W. by S., Queen Charlotte's Island, at this me hearing E. by N. distant 15 miles. At half an hour

me bearing E. by N. distant 15 miles. At half an hour ter three, we were within about three quarters of a mile the east end of the island, and ran close along the shore, at had no soundings. The east and west ends are joined each other by a reef of rocks, over which the sea breaks to a lagoon, in the middle of the island, which, therefore at the appearance of two islands, and seemed to be about miles long, and four broad. The whole of it is low and, full of trees, but we saw not a single cocoa-nut, nor by huts: we found, however, at the westermost end, all be canoes and people who had sled, at our approach, from the lucen Charlotte's Island, and some more. We counted

ght double canoes, and about fourscore people, men,
R 3 women,

women, and children. The canoes were drawn upon the beach, the women and children were placed near then and the men advanced with their pikes and firebrands, making a great noise, and dancing in a strange manner. We observed that this island was sandy, and that under the trees there was no verdure. As the shore was every when rocky, as there was no anchorage, and as we had no propect of obtaining any refreshment here, I set sail at so o'clock in the evening, from this island, to which I gave the name of EGMONT ISLAND, in honour of the Earl Egmont, who was then first Lord of the Admiralty. lies in latitude 19° 20' S., longitude, by observation, 138 lies in latitude 19° 20' S., longitude, by observation, 138

30' W.

At one o'clock, Thursday 11. we saw an island in the W. S. W. and stood for it. At four in the afternoo we were within a quarter of a mile of the shore, and ran long it, founding continually, but could get no groun It is surrounded on every side by rocks, on which the s breaks very high. It is full of trees, but not one cocoa-nu and has much the same appearance with Egmont Islan but is much narrower. Among the rocks, at the west en we saw about sixteen of the natives, but no canoes: the carried long pikes or poles in their hands, and seemed be, in every respect, the same kind of people that we had feen before. As nothing was to be had here, and it ble very hard, I made fail till eight in the evening, and the brought to. To this island, which is about fix miles lon and from one mile to one quarter of a mile broad, I ga the name of GLOUCESTER ISLAND, in honour of his Ro al Highness the Duke. It lies in latitude 190 11' S., a longitude, by observation, 140° 4' W.

At five o'clock in the morning. Friday 12. we may fail, and soon after saw another island. At 10 o'clock the weather being tempestuous, with much rain, we saw long reef, with breakers on each side of the island, at therefore brought the ship to, with her head off the show the sissand, which lies in latitude 19° 18' S., longitue by observation, 140° 36' W., I gave the name of Cumbe LAND ISLAND, in bonour of his Royal Highness the Duk It lies low, and is about the same fize as Queen Charlott Island. We found the variation of the needle here to

10' E. As I had no hope of finding any refreshment ere, I stood on to the westward.

At day-break, on Saturday 13. we saw another small wisland, in the N. N. W. right to windward. It had e appearance of small flat keys. This place I called RINCE WILLIAM HENRY'S ISLAND, in honour of his lajesty's third son. It lies in latitude 19° S., longitude, observation, 141° 6' W. I made no stay here, hopg, that to the westward I should find higher land, where he ship might come to an anchor, and such refreshments we wanted be procured.

Soon after day-light, on Wednesday 17. we saw land earing W. by N. and making in a small round hummock. At noon, when it bore N. 64° W. distant about five agues, its appearance greatly resembled the Mewstone in Plymouth Sound, but it seemed to be much larger. We found the ship this day, 20 miles to the northward of her ackoning, which I imputed to a great S. W. fwell.

At five in the evening, this island bore N. W. distant bout eight miles. I then hauled the wind, and stood on and off all night. At ten, we saw a light upon the shore, which, though the island was small, proved that it was inabited, and gave us hopes that we should find anchorage mrit. We observed with great pleasure, that the land ble was very high, and covered with cocoa trees; a fure fign hat there was water.

lon The next morning, Thursday 18. I sent Lieutenant ga furneaux to the shore, with the boats manned and armed, Round all kinds of trinkets, to establish a trassic with the na-, at tives, for fuch refreshments as the place would afford. I twe him orders also to find, if possible, an anchoring-place ma for the ship. While we were getting out the boats, several loc anoes put off from the island, but as soon as the people on saw loard saw them make towards the shore, they put back. At noon, the boats returned, and brought with them a thor pig and a cock, with a few plantains and cocoa-nuts. Mr gitu Furneaux reported, that he had seen at least an hundred of the inhabitants, and believed there were many more upon Duk the island; but that having been all round it, he could find lott no anchorage, nor scarcely a landing place for the boat. When he reached the shore, he came to a grappling, and threw a warp to the Indians upon the beach, who caught

it and held it fast. He then began to converse with the by figns, and observed that they had no weapon amon them, but that some of them had white sticks, which seem ed to be enfigns of authority, as the people who bore the kept the rest of the natives back. In return for the pi and the cock, he gave them some beads, a looking glass, few combs, with several other trinkets, and a hatchet. The women, who had been kept at a distance, as soon as the faw the trinkets, ran down in a crowd to the beach, wit great eagerness, but were soon driven away by the men, which they expressed much disappointment and vexation While this traffic was carrying on, a man came secret round a rock, and diving down, took up the boat's gran pling, and at the same time the people on shore who he the warp, made an effort to draw her into the furf. A foon as this was perceived by the people on board, the fired a musket over the man's head who had taken up the grappling, upon which he instantly let it go, with mark of great terror and aftonishment; the people on shore al let go the rope. The boats after this, lay some time upo their oars, but the officer finding that he could get nothing more, returned on board. Mr Furneaux told me, th both the men and women were clothed, and he brought piece of their cloth away with him. The inhabitants a peared to him to be more numerous than the island cou support, and for this reason especially as he saw some large double canoes upon the beach, he imagined there we islands of larger extent, not far distant, where refreshmen in greater plenty might be procured, and hoped that the might be less difficult of access. As I thought this are sonable conjecture, I hoisted in the boats, and determin to run farther to the westward. To this place, which nearly circular, and about two miles over, I gave the nan of OSNABURGH ISLAND, in honour of Prince Frederic who is bishop of that see. It lies in latitude 17° 51' and longitude 147° 30' W.; the variation here was CHA 10' E.

Account of the Discovery of King George the Third's Mand, or Otaheite, and of several Incidents which happenwhich on board the Ship and on Shore.

I two o'clock, the same day, we bore away, and in about half an hour, discovered very high land in the S. W. At seven in the evening, Osnaburgh Island E. N. E. and the new discovered land, from W. N. to W. by S. As the weather was thick and squally, brought to for the night, or at least till the fog should ak away. At two in the morning, Friday 19. it being rclear, we made fail again; at day-break we faw the d'at about five leagues distance, and steered directly it; but at eight o'clock, when we were close under it, fog obliged us again to lie to, and when it cleared awe were much surprised to find ourselves surrounded some hundreds of canoes. They were of different sizes, had on board different numbers, from one to ten, so tin all of them together, there could not be less than ht hundred people. When they came within pistol shot the ship, they lay by, gazing at us with great astonishnt, and by turns conferring with each other. mean time we shewed them trinkets of various kinds, linvited them on board. Soon after, they drew togem, and held a kind of council, to determine what should done: then they all paddled round the ship, making s of friendship, and one of them holding up a branch of plantain tree, made a speech that lasted near a quarter in hour, and then threw it into the sea. Soon after, we continued to make figns of invitation, a fine, stout, dy young man ventured on board: he came up by the ten chains, and jumped out of the shrouds upon the of the awning. We made figns to him to come down on the quarter deck, and handed up some trinkets to n: he looked pleased, but would accept of nothing till ne of the Indians came along-fide, and after much talk, tew a few branches of plantain tree on board the ship, he accepted our presents, and several others very soon ne on board, at different parts of the ship, not knowing proper entrance. As one of these Indians was stand-

ing near the gangway, on the larboard fide of the quar deck, one of our goats butted him upon the haunches: ing furprised at the blow, he turned hastily about, and the goat raised upon his hind legs, ready to repeat the bl The appearance of this animal, so different from any had ever seen, struck him with such terror, that he insta ly leaped over board; and all the rest, upon seeing w had happened, followed his example with the utmost p cipitation: they recovered, however, in a short til from their fright, and returned on board. After hav a little reconciled them to our goats and sheep, I shev them our hoge and poultry, and they immediately m figns that they had such animals as these. I then diltri ted trinkets and nails among them, and made figns t they should go on shore and bring us some of their ho fowls and fruit, but they did not seem to understand meaning: they were, in the mean time, watching an portunity to steal some of the things that happened to in their way, but we generally detected them in the tempt. At last, however, one of the midshipmen happ ed to come where they were flanding, with a new laced upon his head, and began to talk to one of them by fig while he was thus engaged, another of them came beh him, and fuddenly inatching off the hat, leaped over taffarel into the sea, and swam away with it.

As we had no anchorage here, we stood along the sho fending the boats at the same time to found at a less tance. As none of these canoes had sails, they could keep up with us, and therefore foon paddled back towa the shore. The country has the most delightful and mantic appearance that can be imagined: towards the it is level, and is covered with fruit trees of various kin particularly the cocoa-nut. Among these are the hou of the inhabitants, consisting only of a roof, and at a tance having greatly the appearance of a long barn. country within, at about the distance of three miles, r into lofty hills, that are crowned with wood, and minate in peacks, from which large rivers are precipi ted into the sea. We saw no shoals, but found the isle skirted by a reef of rocks, through which there are few openings into deep water. About three o'clock in the ternoon, we brought to, a breast of a large bay, wh th lar

ne was an appearance of anchorage. The boats were pediately fent to found it, and while they were thus ployed, I observed a great number of canoes gather nd them. I suspected that the Indians had a design attack them, and as I was very defirous to prevent mif-If, I made the fignal for the boats to come on board, at the same time, to intimidate the Indians, I fired a epounder over their heads. As soon as the cutter beto stand towards the ship, the Indians in their canoes, agh they had been startled by the thunder of our nine inder, endeavoured to cut her off. The boat, howefailing faster than the canoes could paddle, soon got nof those that were about her; but some others, that e full of men, way laid her in her course, and threw se-Ittones into her, which wounded some of the people. on this, the officer on board fired a musquet, loaded buck-shot, at the man who threw the first stone, and unded him in the shoulder. The rest of the people in the oe, as soon as they perceived their companion woundleapt into the sea, and the other canoes paddled away reat terror and confusion. As soon as the boats reachthe ship, they were hoisted on board, and just as she about to stand on, we observed a large canoe, under making after us. As I thought she might have some lef on board, or might have been dispatched to bring amessage from some Chief, I determined to wait for She failed very fast, and was soon along side of the , but we did not observe among those on board, any that seemed to have an authority over the rest. One them, however stood up, and having made a speech, ich continued about five minutes, threw on board a nch of the plantain tree. We understood this to be a en of peace, and we returned it, by handing over one of the officers who had been fent out with the boats in med me that they had found if the med me that they had found in the second of the seco the branches of plantain that had been left on board by

and as great a depth of water as at the other islands: wever, as I was on the weather fide of the island, I had on to expect anchorage in running to leeward. I there-

fore took this course, but finding breakers that ran off a great distance from the south end of the island, I hau the wind, and contined turning to windward all night, order to run down on the east side of the island.

Saturday 20. At five o'clock in the morning, we may fail, the land bearing N. W. by W. distant to league and there seemed to be land five leagues beyond it, to N. E.; a remarkable peak, like a sugar loaf, bore N. E. when we were about two leagues from the shore, whi afforded a most delightful prospect, and was full of hou and inhabitants. We saw several large canoes near shore, under sail, but they did not steer towards the sh At noon, we were within two or three miles of the illa and it then bore from S. 1 W. to N. W. by N. We co tinued our course along the shore, sometimes at the -tance of half a mile, and sometimes at the distance of se or five miles, but hitherto had got no soundings. At o'clock in the evening, we were abreaft of a fine river, a the coast having a better appearance here than in any ther part we had seen, I determined to stand off and all night, and try for anchorage in the morning. As fo as it was dark, we saw a great number of lights all ald the shore. At day break, Sunday 21. we sent out boats to found, and foon after, they made the fignal 20 fathom. This produced an universal joy, which is easy to describe, and we immediately ran in, and came an anchor in 17 fathom, with a clear fandy bottom. lay about a mile distant from the shore, opposite to a s run of water; the extremes of the land bearing from S. E. to N. W. by W. As foon as we had fecured ship, I fent the boats to found along the coast, and lo at the place where we faw the water. At this time, ac fiderable number of canoes came off to the ship, brought with them hogs, fowls, and fruit in great plen which we purchased for trinkets and nails. But when boats made towards the shore, the canoes, most of wh were double, and very large, failed after them. At f they kept at a distance, but as the boats approached shore, they grew bolder, and at last three of the larg ran at the cutter, slaved in her quarter, and carried aw her out-rigger, the Indians preparing at the same time board her, with their clubs and paddles in their han

people being thus pressed, were obliged to fire, by ich one of the affailants was killed, and another much unded. Upon receiving the shot, they both fell overerd, and all the people who were in the same canne, inthy leaped into the sea after them: the other two caadropped aftern, and our boats went on without any ther interruption. As foon as the Indians, who were the water, faw that the boats thood on without attempto do them any farther hurt, they recovered their caand hauled in their wounded companions. They set m both upon their feet to see if they could stand, and ing they could not, they tried whether they could fit ight: one of them could, and him they supported in posture, but perceiving that the other was quite dead, y laid the body along at the bottom of the canoe. Afthis some of the canoes went ashore, and others returngain to the ship to traffic, which is a proof that our duct had convinced them that while they behaved peacethey had nothing to fear, and that they were conscithey had brought the mischief, which had just happenupon themselves.

The boats continued founding till noon, when they rened with an account that the ground was very clear,
tit was at the depth of five fathom, within a quarter of
the of the shore, but that there was a very great surf
the we had seen the water. The officers told me, that
tinhabitants swarmed upon the beach, and that many
them swam off to the boat with fruit, and bamboos filled
th water. They said that they were very importunate
the them to come on shore, particularly the women, who
the down to the beach, and stripping themselves naked,
the down to the beach, and stripping themselves naked,
the down to allure them by many wanton gestures, the
time, however, our people resisted the temptation.

In the afternoon, I sent the boats again to the shore, the some barecas, or small casks, which are silled at the ad, and have a handle by which they are carried, to endeant to procure some water, of which we began to be in that want. In the mean time many of the canoes contical about the ship, but the Indians had been guilty of many thests, that I would not suffer any more of them

come on board.

At five in the evening, the boats returned with only twe barecas of water, which the natives had filled for them and as a compensation for their trouble, they thought to detain all the rest. Our people, who did not leave their boat, tried every expedient they could think of a induce the Indians to return their water vessels, but we thout success; and the Indians, in their turn, were very pressing for our people to come on shore, which the thought it prudent to decline. There were many thousand of the inhabitants of both sexes, and a great number of children on the beach, when our boats came away.

The next morning, Monday 22. I fent the boats of shore again for water, with nails, hatchets, and such other things as I thought most likely to gain the friendship of the inhabitants. In the mean time, a great number of canoes came off to the ship, with bread fruit, plantains, a fruit resembling an apple, only better, sowls and hog which we purchased with beads, nails, knives, and other articles of the like kind, so that we procured pork enoug to serve the ship's company two days, at a pound a man.

When the boats returned, they brought us only a fe calibashes of water, for the number of people on the beac was so great, that they would not venture to land, thoug the young women repeated the allurements which the practifed the day before, with still more wanton, and, possible, less equivocal gestures. Fruit and provisions various kinds were brought down and ranged upon th beach, upon which our people were also invited to partake as an additional inducement for them to leave the boar They continued, however, inexorable, and shewing th Indians the barecas on board, made figns that they should bring down those which had been detained the day before to this the Indians were inexorable in their turn, and on people therefore weighed their grapplings, and founded a round the place, to see whether the ship could come in nea enough to cover the waterers, in which case they migh venture on shore, in desiance of the whole island. Whe they put off, the women pelted them with apples and ba nanas, shouting, and shewing every mark of derision and contempt that they could devise. They reported, that the

ip might ride in four fathom water, with fandy ground, two cable's length from the shore, and in five fathom ater at three cables' length. The wind here blew right long the shore, raising a great surf on the side of the vessel, and on the beach.

At day-break, the next morning, Tuesday 23. we eighed with a defign to anchor off the watering-place. we were standing off, to get farther to windward, we Movered a bay about fix or eight miles to leeward, over kland, from the mast-head, and immediately bore away tit, fending the boats a head to found. At nine o'clock boats making the fignal for 12 fathom, we hauled and a reef, and stood in, with a design to come to an chor; but when we came near the boats, one of which m on each bow, the ship struck. Her head continued moveable, but her stern was free; and, upon casting elead, we found the depth of water, upon the reef or oal, to be from 17 fathom to two and a half: we clewall up as fast as possible, and cleared the ship of what mber there happened to be upon the deck, at the same ne getting out the long boat, with the stream and kedge chors, the stream cable and bauser, in order to carry m without the reef, that when they had taken ground, thip might be drawn off towards them, by applying a at force to the capstern, but unhappily without the reef thad no bottom. Our condition was now very alarmg, the ship continued beating against the rock with great ice, and we were furrounded by many hundred canoes, Tof men; they did not, however, attempt to come on and us, but seemed to wait in expectation of our shipteck. In the anxiety and terror of such a situation we intinued near an hour, without being able to do any thing our deliverance, except staving some water casks in the re-hold, when a breeze happily springing up from the shore, the ship's head swung off. We immediately essed her with all the sail we could make; upon which began to move, and was very foon once more in deep

We now stood off, and the boats being sent to leeward, and that the reef ran down to the west ward about a le and a half, and that beyond it there was a very good hour. The master, after having placed a boat at the

end of the reef, and furnished the long-boat with anch and hausers, and a guard to defend her from an attack the Indians, came on board, and piloted the ship rou the reef into the harbour, where, about twelve o'cloc she came to an anchor in 17 fathom water, with a filbottom of black sand.

The place where the ship struck appeared, upon farth examination, to be a reef of sharp coral rock, with ve unequal foundings, from fix fathom to two; and it ha pened unfortunately to lie between the two boats th were placed as a direction to the ship, the weatherm boat having 12 fathom, and the leewardmost nine. T wind freshened almost as soon as we got off, and though foon became calm again, the furf ran fo high, and bro with fuch violence upon the rock, that if the ship had co tinued fast half an hour longer, she must inevitably ha been beaten to pieces. Upon examining her bottom, could not discover that she had received any damage, of cept that a small piece was beaten off the bottom of h rudder. She did not appear to admit any water, but t trussle-trees, at the head of all the masts, were brok short, which we supposed to have happened while she w beating against the rock. Our boats lost their grapplin upon the reef, but as we had reason to hope that t ship was found, they gave us very little concern. As so as the ship was secured, I sent the master, with all t boats manned and armed, to found the upper part of t bay, that if he found good anchorage we might warp t ship up within the reef. and anchor her in safety. T weather was now very pleasant, a great number of cand were upon the reef, and the shore was crowded with pe ple.

About four in the afternoon the master returned, a reported, that there was every where good anchorage; therefore determined to warp the ship up the bay early the morning, and in the mean time. I put the peop at four watches, one watch to be always under arm loaded and primed all the guns, fixed musquetoons in the boats, and ordered all the people who were not up the watch, to repair to the quarters assigned them, at moment's warning, there being a great number of cano some of them very large, and full of men, hovering up

he shore, and many smaller venturing to the ship, with logs, sowls, and fruit, which we purchased of them, such to the satisfaction of both parties; and at sun-set, the canoes rowed in to the shore.

At fix o'clock the next morning, Wednesday 24. we gan to warp the ship up the harbour, and soon after, a reat number of canoes came under her stern. As I pergived that they had hogs, fowls, and fruit on board, I indered the gunner, and two midwipmen, to purchase hem for knives, nails, beads, and other trinkets, at the me time prohibiting the trade to all other persons on bard. By eight o'clock, the number of canoes was greatincreased, and those that came last up were double, of very large fize, with twelve or fifteen stout men in each. lobserved, with some concern, that they appeared to be smilhed rather for war than trade, having very little on board except round pebbles stones; I therefore sent for Mr furneaux, my first lieutenant being still very ill, and orderdhim to keep the fourth watch constantly at their arms, shile the rest of the people were warping the ship. In he mean time more canoes were continually coming off som the shore, which were freighted very differently from he rest, for they had on board a number of women who ere placed in a row, and who, when they came near the hip, made all the wanton gestures that can be conceived. While these ladies were practifing their allurements, the arge canoes, which were freighted with stones, drew toether very close round the ship, some of the men on board inging in a hoarse voice, some blowing conchs, and some laying on a flute. After some time, a man who sat upon canopy that was fixed on one of the large double canoes ade figns that he wished to come up to the ship's fide; I mmediately intimated my confent, and when he came aong fide, he gave one of the men a bunch of red and yelow feathers, making signs that he should carry it to me. received it with expressions of amity, and immediately ot some trinkets to present him in return, but to my great arprise he had put off to a little distance from the ship, and upon his throwing up the branch of a cocoa nut tree, there was an universal shout from all the canoes, which at ince moved towards the ship, and a shower of stones was oured into her on every fide. As an attack was now be-

gun, in which our arms only could render us superior the multitude that affailed us, especially as great part of the ship's company was in a fick and feeble condition, I orde ed the guard to fire; two of the quarter-deck guns, which I had loaded with small shot, were also fired nearly at the same time, and the Indians appeared to be thrown in some confusion: in a few minutes, however, they renev ed the attack, and all our people that were able to con upon deck, having by this time got to their quarters, ordered them to fire the great guns, and to play some them constantly at a place on shore, where a great nun ber of canoes were still taking in men, and pushing off t wards the ship with the utmost expedition. When the great guns began to fire, there were not less than thr hundred canoes about the ship, having on board at lea two thousand men; many thousands were also upon the shore, and more canoes coming from every quarter: the firing, however, foon drove away the canoes that were bout the ship, and put a stop to the coming off of thers. As foon as I saw some of them retreating, and the rest quiet, I ordered the firing to cease, hoping that the were fufficiently convinced of our superiority, not to rene the contest. In this, however, I was unhappily mistaker a great number of the canoes that had been dispersed, so drew together again, and lay fome time on their paddle looking at the ship from the distance of about a quarter a mile, and then suddenly hoisting white streamers, pull toward the ship's stern, and began again to throw stone with great force and dexterity, by the help of sings, fro a confiderable dittance : each of these stones weighed abo two pounds, and many of them wounded the people board, who would have fuffered much more, if an awnit had not been spread over the whole deck to keep out t fun, and the hammocks placed in the nettings. At I same time several canoes well manned, were making t wards the ship's bow, having probably taken notice th no shot had been fired from this part : I therefore order fome guns forward, to be well pointed and fired at the canoes; at the same time running out two gons aba and pointing them well at the canoes that were making t attack. Among the canoes that were coming toward t bow, there was one which appeared to have some Chief boar

and, as it was by figuals made from her that the others d been called together: it happened that a shot, fired om the guns forward, hit this canoe fo full as to cut it funder. As foon as this was observed by the rest, they spersed with such haste that in half an hour there was not fingle canoe to be feen: the people also who had croudthe shore, immediately sled over the hills with the utof precipitation.

Having now no reason to fear any further interruption, warped the ship up the harrour, and by noon, we were ot more than half a mile from the upper part of the bay, ithin less than two cables' length of a fine river, and aout two and a half of the reef. We had here nine fathom nter, and close to the shore there were five. We moorthe ship, and carried out the stream anchor, with the no shroud hausers, for a spring, to keep the ship's broad de abreatt of the river; we also got up and mounted the ight guns which had been put into the hold. As foon as his was done, the boats were employed in founding all aound the tay, and in examining the shore where any of e inhabitants appeared. in order to discover, whether was probable that they would give us any farther difbance. All the afternoon, and part of the next morng, Thursday 25. was spent in this service; and about oon, the master returned, with a tolerable survey of the ace, and reported, that there were no canoes in fight; hat there was good landing on every part of the beach; that here was nothing in the bay from which danger could be pprehended, except the reef, and feme rocks at the upper abouted which appeared above water; and that the river, hough it emptied itself on the other fide of the point, was vnii water. It was a same with the water with the w

t to Soon after the master had brought me this account, I t I Int Mr Furneaux again, with all the boats manned and the bland opposite to our station, and secure himself, under der over of the boats and the ship, in the clearest ground he the would find About two o'clock the boats landed without any opposition, and Mr Furneaux stuck up a staff, upon which ngt he hoisted a pendant, turned a turf, and took possession of ed to the island in his Majesty's name, in honour of whom he nief called it King George the Thind's Island: he then

went

went to the river, and tafted the water, which he for excellent, and mixing some of it with rum, every r drank his Majetty's health. While he was at the ri which was about twelve yards wide, and fordable, he two old men on the opposite side of it, who perceiv that they were discovered, put themselves in a supplied - ry posture, and seemed to be in great terror and confus Mr Furneaux made figns that they should come over river, and one of them complied. When he landed, came forward, creeping upon his hands and his knees, Mr Furneaux raised him up, and while he stood trembli fhewed him some of the stones that were thrown at ship, and endeavoured to make him apprehend that if natives attempted no mischief against us, we should do harm to them. He ordered two of the water casks to filled to shew the Indian that he wanted water, and p duced some hatchets, and other things, to intimate that wished to trade for provisions. The old man, during pantomimical conversation, in some degree recovered spirits; and Mr Furneaux, to confirm his professions friendship, gave him a hatchet, some nails, beads, and ther trifles; after which he re-imbarked on board boats, and left the pendant flying. As foon as the bo were put off, the old man went up to the pendant, danced round it a considerable time: he then retired, foon after returned with some green boughs, which threw down, and retired a fecond time: it was not lo however, before he appeared again, with about a do of the inhabitants, and putting themselves in a suppl ting posture, they all approached the pendant in a pace put the wind happening to move it, when they w got close to it, they fundenly retreated with the great precipitation. After standing some time at a distance. gazing at it, they went away, but in a short time co back. with two large hogs alive, which they laid down the foot of a staff and at length, taking courage, they gan to dance. When they had performed this ceremo they brought the hogs down to the water-tide, launche canoe, and put them on board. The old man, who a large white beard, then embarked with them, alone brought them to the ship: when he came along side, made a fet speech, and afterwards handed in several gr plant 

le, and received the ma

Intain leaves, one by one, uttering a sentence, in a son slow tone, with each of them as he delivered it; after she sent on board the two hogs, and then turning and, pointed to the land. I ordered some presents to given him, but he would accept of nothing; and soon

er put off his canoe, and went on shore. At night, foon after it was dark, we heard the noise of my drums, with conchs, and other wind instruments, and ra multitude of lights all along the coast. At six in the orning, Friday 26. seeing none of the natives on shore, dobserving that the pendant was taken away, which bably they had learnt to despise, as the frogs in the fadid King Log, I ordered the lieutenant to take a guard shore, and if all was well, to send off, that we might bewatering: in a short time, I had the satisfaction to find the had sent off for water casks, and by eight o'clock, had four tons of water on board. While our people er employed in filling the casks, several of the natives eared on the opposite side of the river, with the old m whom the officer had feen the day before; and foon er he came over, and brought with him a little fruit, da few fowls, which were also sent off to the ship. At time, having been very ill for near a fortnight, I was weak that I could scarcely crawl about; however, I emged my glasses to see what was doing on shore. At near fan hour after eight o'clock, I perceived a multitude of e natives coming over a hill at about the distance of a e, and at the same time a great number of canoes mag round the western point, and keeping close along the re. I then looked at the watering place, and faw at back of it, where it was clear, a very numerous party the natives creeping along behind the bushes; I saw almany thousands in the woods, pushing along towards watering-place, and canoes coming very fall round the her point of the bay to the eastward. Being alarmed at ele appearances. I dispatched a boat, to acquaint the officer shore with what I had seen, and order him immediately to me on board with his men and leave the casks behind m: he had, however, discovered his danger and embarkbefore the boat reached him. Having perceived the dians that were creeping towards him under shelter of wood, he immediately dispatched the old man to them,

making figns that they should keep at a distance, and the he wanted nothing but water. As foon as they perceive that they were discovered, they began to shout, and adva ced with greater speed. The officer immediately repair to the boats with his people, and the Indians, in the me time having croffed the river, took poffession of the wa casks, with great appearance of exultation and joy. T canoes now pulled along the shore, towards the place, w the utmost expedition, all the people on land keeping pa with them, except a multitude of women and childre who feated themselves upon a hill which overlooked t bay and the beach. The canoes from each point of t bay, as they drew nearer to that part of it where the fi was at anchor, put on shore, and took in more men, who h great bags in their hands, which afterwards appeared befilled with stones. All the canoes that had come rou the points, and many others that had put off from the she within the bay, now made towards the ship, so that I h no doubt but that they intended to try their fortune in second attack. As to shorten the contest would certain lessen the mischief, I determined to make this action de five, and put an end to hostilities at once; I therefore dered the people, who were allest their quarters, to fire fi upon the canoes which were drawn together in groups: the was immediately done to effectually, that those which we to the wellward made towards the shore as fast as possib and those to the eastward, getting round the reef, were so beyond the reach of our guns. I then directed the fire i to the wood in different parts, which foon drove the Ind ans out of it. who ran up the hill where the women a children had feated themselves to see the battle. Up this hill there were now feveral thousands who though themselves in perfect security; but to convince them the contrary, and hoping that when they faw the shot f much farther than they could think possible, they wou Suppose it could reach them at any distance, I ordered son of the guns to be let down as low as they would admit, an fired four shot towards them. Two of the balls fell clo by a tree where a great number of these people were si ing, and struck them with such terror and consternation that in less than two minutes not one of them was to feen. Having thus cleared the coast, I manned and arn eiv

the boats, and putting a strong guard on board, I sent the carpenters with their axes, and ordered them to deevery canoe that had been run ashore. Before noon, service was effectually performed, and more than fifty oes, many of which were fixty feet long, and three d, and lashed together, were cut to pieces. Nothing found in them but stones and slings, except a little and a few fowls and hogs, which were on board two hree canoes of a much smaller fize.

At two o'clock in the afternoon, about ten of the nacame out of the wood with green boughs in their d, which they fluck up near the water fide, and re-

After a short time, they appeared again, and the 19th with them several hogs, with their legs tied, th they placed near the green boughs, and retired a nd time. After this they brought down several more and some dogs, with their fore legs tied over their and going again into the woods, brought back sebundles of the cloth which they use for apparel, and th has some resemblance to Indian paper. These they ed upon the beach, and called to us on board to fetch away. As we were at the distance of about three s length, we could not then perfectly discover of what peace offering confifted: we gueffed at the hogs and doth, but seeing the dogs, with their fore legs appearover the hinder part of the neck, rise up several times, run a little way in an erect posture, we took them for thrange unknown animal, and were very impatient to a nearer view of them. The boat was therefore sent fore with all expedition, and our wonder was foon at nd. Our people found nine good hogs, besides the and the cloth: the hogs were brought off, but the were turned loose, and with the cloth left behind. In m for the hogs, our people left upon the shore some hets, nails, and other things, making figns to some of Indians who were in fight, to take them away with Soon after the boat had come on board, the cloth. ans brought down two more hogs, and called to us to them; the boat therefore returned, and fetched off two hogs, but still left the cloth, though the Indians, figns that we should take it. Our people reported, they had not touched any of the things which they,

had left upon the beach for them, and somebody suggeting that they would not take our offering because we had accepted their cloth, I gave orders that it should setched away. The event proved that the conjecture we true, for the moment the boat had taken the cloth board, the Indians came down, and with every possible monstration of joy, carried away all I had sent them in the wood. Our boats then went to the watering pla and silled and brought off all the cases, to the amount about six tons. We found that they had suffered no in ry while they had been in the possession of the India but some leathern buckets and sunnels which had been

ken away with the casks, were not returned.

The next morning, Saturday 27. I fent the boats shore, with a guard, to fill some more casks with wat and foon after the people were on shore, the same old m who had come over the river to them the first day, ca again to the farther side of it, where he made a long spee and then croffed the water. When he came up to the terers, the officer shewed him the stones that were piled like cannon balls upon the shore, and had been broug thither fince our first landing, and some of the bags th had been taken out of the canoes, which I had ordered be destroyed, filled with stones, and endeavoured to ma him understand that the Indians had been the aggresse and that the mischief we had done them was in our o defence. The old man seemed to apprehend his meani but not to admit it: he immediately made a speech to people, pointing to the stones, slings, and bags, w great emotion, and sometimes his looks, gestures, voice were so furious as to be frightful His passio however, subsided by degrees, and the officer, who to great regret could not understand one word of all that had faid, endeavoured to convince him, by all the figns could devile, that we wished to live in friendship w them, and were disposed to shew them every mark kindness in our power. He then shook hands with h and embraced him, giving him at the same time seve fuch trinkets as he thought would be most acceptable. contrived also to make the old man understand that wished to traffic for provisions, that the Indians should come down in great numbers, and that they should keep gg

fide of the river and we on the other. After this the man went away with great appearance of satisfaction, before noon a trade was established, which surnished with hogs, sowls, and fruit in great abundance, so that the ship's company, whether sick or well, had as much shey could use.

## CHAP. VI.

Sick sent on Shore, and a regular Trade established with the Natives; some Account of their Character and Manners, of their Visits on board the Ship, and a Variety of Incidents that happened during this course.

ATTERS being thus happily fettled, I fent the furgeon, with the second lieutenant, to examine the intry, and fix upon some place where the fick might eup their residence on shore. When they returned, y said, that with respect to health and convenience, all places they had feen upon the island feemed to be eally proper; but that with respect to safety, they could commend none but the watering place, as they would be ne under the protection of the ship and the guard, and ould easily be prevented from straggling into the country dbrought off to their meals. To the watering-place refore I fent them, with those that were emproyed in ing the casks, and appointed the ganner to command eparty that was to be their guard. A tent was erected them as a melter both from the fun and the rain, and the geon was fent to superintend their conduct, and give his vice if it should be wanted. It happened that walking t with his gun, after he had feen the fick properly diffed of in the tent, a wild duck flew over his head, hich he shot, and it fell dead among some of the tives who were on the other fide of the river. This rew them into a panic, and they all ran away; when ey got to some distance they stopped, and he made signs them to bring the duck over; this one of them at last intured to do, and, pale and trembling, laid it down at Several other ducks happening at the instant to Vol. II.

fly over the spot where they were standing, he fired ag and fortunately brought down three more. This incide gave the natives such a dread of a gun, that if a muse was pointed at a thousand of them, they would all run way like a slock of sheep; and probably the ease which they were afterwards kept at a distance, and the orderly behaviour in their traffic, was in a great mean owing to their having upon this occasion seen the instance of which before they had only felt the effects.

As I forefaw that a private traffic would probably co mence between such of our people as were on shore, the natives, and that if it was left to their own capr perpetual quarrels and mischief would ensue, I ordered all matters of traffic should be transacted by the gunner behalf of both parties, and I directed him to fee that injury was done to the natives, either by violence or fra and by all possible means to attach the old man to his in reft. This service he performed with great diligence fidelity, nor did he neglect to complain of those who tra gressed my orders, which was of infinite advantage to parties; for as I punished the first offenders with a nece ry feverity, many irregularities, that would otherwise h produced the most disagreeable consequences, were preve ed: we were also indebted for many advantages to the man, whose caution kept our people perpetually upon the guard, and foon brought back those who straggled fr the party. The natives would indeed sometimes pill but by the terror of a gun, without using it, he alw found means to make them bring back what was fol A fellow had one day the dexterity and address to co the river unperceived, and steal a hatchet; the gunner, foon as he missed it, made the old man understand w had happened, and got his party ready, as if he would h gone into the woods after the thief: the old man, ho ver, made figns that he would fave him the trouble, immediately setting off, returned in a very short time w the hatchet. The gunner then infifted that the offen should be delivered up, and with this also the old m though not without great reluctance, complied. Wh the fellow was brought down, the gunner knew him to an old offender, and therefore fent him prifoner on hoa I had no intention to punish him otherwise, than by

of punishment, and therefore after great entreaty and ercession, I gave him his liberty, and sent him on shore. hen the natives faw him return in fafety, it is hard to whether their assonishment or joy was greatest; they fived him with universal acclamations, and immediately fied him off into the woods: the next day, however, returned, and as a propitiation to the gunner, he night him a considerable quantity of bread-fruit, and a

re hog, ready roafted. At this time, the people on board were employed in king and painting the weather-work, over-hauling the ging, stowing the hold, and doing other necessary buds; but my disorder, which was a bilious cholic, inased so much, that this day I was obliged to take to my I; my first lieutenant also still continued very ill, and purser was incapable of his duty. The whole comnd devolved upon Mr Furneaux, the second lieutenant, whom I gave general directions, and recommended a ticular attention to the people on shore. I also ordered t fruit and fresh provisions should be served to the ship's mpany as long as they could be procured, and that the boats uld never be absent from the ship after sun-set. These ctions were fulfilled with such prudence and punctualithat during all my fickness I was not troubled with any iness, nor had the mortification to hear a single comint or appeal. The men were constantly served with h pork, fowls, and fruit, in such plenty, that when I alw my bed, after having been confined to it near a fortstol with, my ship's company looked so fresh and healthy, that ould scarcely believe them to be the same people. w sunday the 28. was marked by no incident; but on wooday 29. one of the gunner's party found a piece of petre near as big as an egg. As this was an object of how all curiofity and importance, diligent inquiry was immee, a stely made from whence it came. The furgeon asked e-

ew yone of the people on shore, separately, whether he brought it from the ship; every one on board also was ed whether he had carried it on shore, but all declared t they had never had fuch a thing in their possession, pplication was then made to the natives, but the meaning boa both parties was so imperfectly conveyed by signs, that thing could be learnt of them about it: during our

whole stay here, however, we saw no more than this o piece. In want bear bear y and had min

While the gunner was trafficking for provisions on sho we sometimes hauled the seine, but we caught no fish; also frequently trawled, but with no better fuccess: t disappointment, however, was not felt, for the produce the island enabled our people to " fare sumptuously eve

All matters continued in the same situation till Thursda July 2. when our old man being absent, the supply fresh provisions and fruit fell short; we had, however, nough to serve most of the messes, referving plenty for t

fick and convalescent.

On Friday 3. we heeled the ship, and looked at her be tom, which we found as clean as when she came out dock, and, to our great fatisfaction, as found. During this time, none of the natives came near our boats, or t ship, in their canoes. This day, about noon, we caug a very large shark, and when the boats went to fetch t people on board to dinner, we fent it on shore. Wh the boats were putting off again, the gunner seeing for of the natives on the other fide of the river, beckoned the to come over; they immediately complied, and he ga them the shark, which they soon cut to pieces, and carri

away with great appearance of fatisfaction.

On Sunday 5. the old man returned to the market-ter and made the gunner understand that he had been up t country, to prevail upon the people to bring down the hogs, poultry, and fruit, of which the parts near the w tering-place were now nearly exhausted. The good fects of his expedition foon appeared, for several India whom our people had never feen before, came in w fome hogs that were larger than any that had been brought to market. In the mean time, the old man ve tured off in his canoe, to the ship, and brought with h as a present to me, a hog ready roasted. I was mu pleased with his attention and liberality, and gave him, return for this hog, an iron pot, a looking glass, a drin ing glass, and several other things, which no man in t island was in possession of but himself.

While our people were on shore, several young wom were permitted to cross the river, who, though they we

taverse to the granting of personal favours, knew the he of them too well not to stipulate for a consideration: price, indeed, was not great, yet it was fuch as our m were not always able to pay, and under this temptatithey stole nails and other iron from the ship. The nails at we brought for traffic, were not always in their reach, d therefore they drew feveral out of different parts the vessel, particularly those that fastened the cleats to hip's fide. This was productive of a double mischief; mage to the ship, and a considerable rise at market. then the gunner offered, as usual, small nails for hogs of a iddling fize, the natives refused to take them, and produced ge spikes, intimating that they expected such nails as ele. A most diligent inquiry was fet on foot to discothe offenders, but all to no purpole; and though a ge reward was offered to procure intelligence, none was tained. I was mortified at the disappointment, but I s still more mortified at a fraud which I found some of r people had practised upon the natives. When no nails ere to be procured, they had stolen lead, and cut it up the shape of nails. Many of the natives who had been id with this base money, brought their leaden nails, th great simplicity, to the gunner, and requested him give them iron in their stead. With this request, hower reasonable, he could not comply, because, by renderglead current, it would have encouraged the fealing it, d the market would have been as effectually spoiled by ofe who could not procure nails, as by those who could; it therefore necessary, upon every account, to render this den currency of no value, though for our honour I ould have been glad to have called it in.

On Tuesday 7. I sent one of the mates, with thirty en, to a village at a little distance from the market, hog that refreshments might there be bought at the orimal price; but here they were obliged to give still more an at the water fide. In the mean time, being this day le to get up for the first time, and the weather being ne, I went into a boat, and rowed about four miles own the coast. I found the country populous, and pleant in the highest degree, and saw many canoes on the ore; but not one came off to us, nor did the people seem

T 3 to

to take the least notice of us as we passed along. Abo

noon I returned to the ship.

The commerce which our men had found means to eff blish with the women of the island, rendered them mu less obedient to the orders that had been given for the gulation of their conduct on shore, than they were at fin I found it necessary therefore, to read the articles of we and I punished James Proctor, the corporal of marin who had not only quitted his station, and insulted the ficer, but struck the Master at Arms such a blow

brought him to the ground.

The next day, Wednesday 8. I sent a party up the contry to cut wood, and they met with some of the native who treated them with great kindness and hospitalis Several of these friendly Indians came on board of a boat, and seemed, both by their dress and behaviour, to of a superior rank. To these people I paid a particue attention, and to discover what present would most grafy them. I said down before them a Johannes, a guinea crown piece, a Spanish dollar, a few shillings, some not half pence, and two large nails, making signs that the should take what they liked best. The nails were signed, with great eagerness, and then a few of the half pence, but the silver and gold lay neglected. Having presented them, therefore, with some nails and half-pent them on shore superlatively happy.

Indians refusing to sell provisions at the usual price, a making signs for large nails. It was now thought necestry to look more diligently about the ship, to discover who nails had been drawn; and it was soon found that all the belaying cleats had been ripped off, and that there we searcely one of the hammock nails left. All hands we now ordered up, and I practised every artistice I contains of to discover the thieves, but without success then told them, that till the thieves were discovered, no single man should go on shore: this however produced effect, except that Proctor, the corporal, behaved in mutinous manner, for which he was instantly punished.

On Saturday 11. in the afternoon, the gunner came hoard with a tall woman, who seemed to be about five a furty years of age, of a pleasing countenance and maje

e a ajef me portment. He told me that she was but just come into a part of the country, and that seeing great respect paid by the rest of the natives, he made her some presents; return for which she had invited him to her house, which about two miles up the valley, and gave him some re hogs; after which she returned with him to the waing-place, and expressed a desire to go on board the , in which he had thought it proper, on all accounts, the should be gratified. She seemed to be under no draint, either from diffidence or fear, when the first came the ship; and she behaved, all the while she was on ard, with an easy freedom, that always distinguishes conous superiority and habitual command. I gave her a ge blue mantle, that reached from her shoulders to her t, which I threw over her, and tied on with ribands; I me her also a looking-glass, beads of several forts, and my other things, which she accepted with a very good ce, and much pleasure. She took notice that I had en ill, and pointed to the shore. I understood that she ant I should go thither to perfect my recovery, and I de signs that I would go thither the next morning. hen she intimated an inclination to return, I ordered egunner to go with her, who, having fet her on shore, tended her to her habitation, which he described, as ng very large and well built. He said, that in this use she had many guards and domestics, and that she another at a little distance, which was enclosed in latwork.

The next morning, Sunday 12. I went on shore for the stime; and my princes, or rather queen, for such by sauthority she appeared to be, soon after came to me, shwed by many of her attendants. As she perceived at my disorder had lest me very weak; she ordered her ople to take me in their arms, and carry me not only on the river, but all the way to her house; and observing at some of the people who were with me, particularly a first lieutenant and purser, had also been sick, she nsed them also to be carried in the same manner, and a tard, which I had ordered out upon the occasion, soluted. In our way, a vast multitude crowded about us, the upon her waving her hand, without speaking a word, sy withdrew, and lest us a free passage. When we approached

proached near her house, a great number of both sex came out to meet her: these she presented to me, afte having intimated by figns that they were her relation and taking hold of my hand, she made them kils it. W then entered the house, which covered a piece of groun 327 feet long, and 42 feet broad. It consisted of a roo thatched with palm leaves, and raised upon 39 pillars of each fide, and 14 in the middle. The ridge of the thatel on the infide, was 30 feet high, and the fides of the houf to the edge of the roof, were 12 feet high; all below the roof being open. As foon as we entered the house, it made us fit down, and then calling four young girls, f affifted them to take off my shoes, draw down my slock ings, and pull off my coat, and then directed them smooth down the skin, and gently chafe it with their hands the same operation was also performed upon the first lies tenant and purser, but upon none of those who appeare to be in health. While this was doing, our furgeon, wh had walked till he was very warm, took off his wig cool and refresh himself; a sudden exclamation of one the Indians who faw it, drew the attention of the rel and in a moment every eye was fixed upon the prodig and every operation was suspended: the whole assembly stood some time motionless, in filent astonishment, which could not have been more strongly expressed if they ha discovered that our friend's limbs had been screwed on the trunk; in a short time, however, the young wome who were chafing us. resumed their employment, an having continued it for about half an hour, they dre fed us again, but in this they were, as may easily b imagined, very aukward; I found great benefit, how ever, from chafing, and so did the lieutenant and pu fer. After a little time, our generous benefactress of dered some bales of Indian cloth to be brought out, wit which she clothed me, and all that were with me, accord ing to the fashion of the country. At first I declined the acceptance of this favour, but being unwilling not to feet pleased with what was intended to please me, I acquiesced When we went away, she ordered a very large fow, bi with young, to be taken down to the boat, and accompa nied us thither herself. She had given directions to he people to carry me, as they had done when I came, but

chose rather to walk, she took me by the arm, and henever we came to a plash of water or dirt, she lifted over with as little trouble as it would have cost me to re lifted over a child if I had been well.

The next morning, Monday 13. I fent her by the gunfix hatchets, fix bill hooks, and feveral other things; when he returned, he told me, that he found her gig an entertainment to a great number of people, which, supposed, could not be less than a thousand. The meswere all brought to her by servants that prepared them, e meat being put into the shells of cocoa nuts, and the ells into wooden trays, somewhat like those used by our tchers, and she distributed them with her own hands to eguests, who were seated in rows round the great house. then this was done, the fat down herfelf, upon a place mewhat elevated above the rest, and two women, placing emselves one on each side of her, fed her, she opening. mouth as they brought their hands up with the food. hen the faw the gunner, the orderd a mels for him; could not certainly tell what it was, but he believed it be fowl picked small, with apples cut among it, and asoned with falt water; it was, however, very well tal-She accepted the things that I fent her, and feemed be much pleased with them. After this correspondence sestablished with the queen, provisions of every kind beme much more plenty at market: but though fowls and ogs were every day brought in, we were still obliged to y more for them than at the first, the market having been foiled by the nails which our men had stolen and given to e women; I therefore gave orders that every man should esearched before he went on shore, and that no women ould be suffered to cross the river.

On Tuesday 14. the gunner being on shore to trade, persived an old woman on the other side of the river, weepg bitterly: when she saw that she had drawn his attention
pon her, she sent a young man, who stood by her, over
he river to him, with a branch of the plantain tree in his
and. When he came up, he made a long speech, and
hen laid down his bough at the gunners feet: after this
e went back and brought over the old woman, another
han at the same time bringing over two large sat hogs.
The woman looked round upon our people with great at-

tention,

tention, fixing her eyes sometimes upon one, and some times upon another, and at last burst into tears. The young man who brought her over the river, perceiving the gunner's concern and aftonishment, made another speech longer than the first: still, however, the woman's distre was a mystery; but at length she made him understand the her husband, and three of her sons, had been killed in th attack of the ship. During this explanation, she was affected, that at last she funk down unable to speak, an the two young men, who endeavoured to support her, at peared to be nearly in the same condition: they were pro bably two more of her fons, or some very near relation The gunner did all in his power to footh and comfort her and when the had in some measure recovered her recolled tion, she ordered the two hogs to be delivered to him, an gave him her hand in token of friendship, but would a cept nothing in return, though he offered her ten times much as would have purchased the hogs at market.

The next morning, Wednesday 15. I sent the secon lieutenant, with all the boats, and fixty men, to the well ward to look at the country, and try what was to be go About noon he returned, having marched along the short near fix miles. He found the country very pleasant an populous, and abounding as well with hogs and fowls, fruit, and other vegetables of various kinds. The inhabi tants offered him no molestation, but did not seem willin to part with any of the provisions which our people wer most desirous to purchase: they gave them, however, few cocoa-nuts and plantains, and at length fold them nin hogs and a few fowls. The lieutenant was of opinion me that they might be brought to trade freely by degrees, but her the distance from the ship was so great, that too many me med would be necessary for a guard. He saw a great numbered as of very large cannes upon the beach, and fome that wer ming building. He observed that all their tools were made of tem, stone, shells, and bone, and very justly inferred, that the that had no metal of any kind. He found no quadrupeds a conti mong them, besides hogs and dogs, nor any earthen vessel. The fo that all their food is either baked or roafted. Having anti no vessel in which water could be subjected to the action of me; fire, they had no more idea that it could be made hot, that I for that it could be made solid. As the queen was one morn us, Tall In 27

nin In the afternoon of the next day, Saturday 18. the queen nion me on board, with a present of two large hogs, for she , but wer condescended to barter, and in the evening she remed on shore. I sent a present with her by the Master, mbe das foon as they landed, she took him by the hand, and wer ming made a long speech to the people that flocked round de dem, she led him to her house, where she clothed him, as the thad before done me, according to the fashion of the

velled The next morning, Sunday 19. he sent off a greater aving antity of stock than we had ever procured in one day beion of the; it consisted of forty eight hogs and pigs, four dozen that fowls, with bread-fruit, bananas, apples, and cocoa-

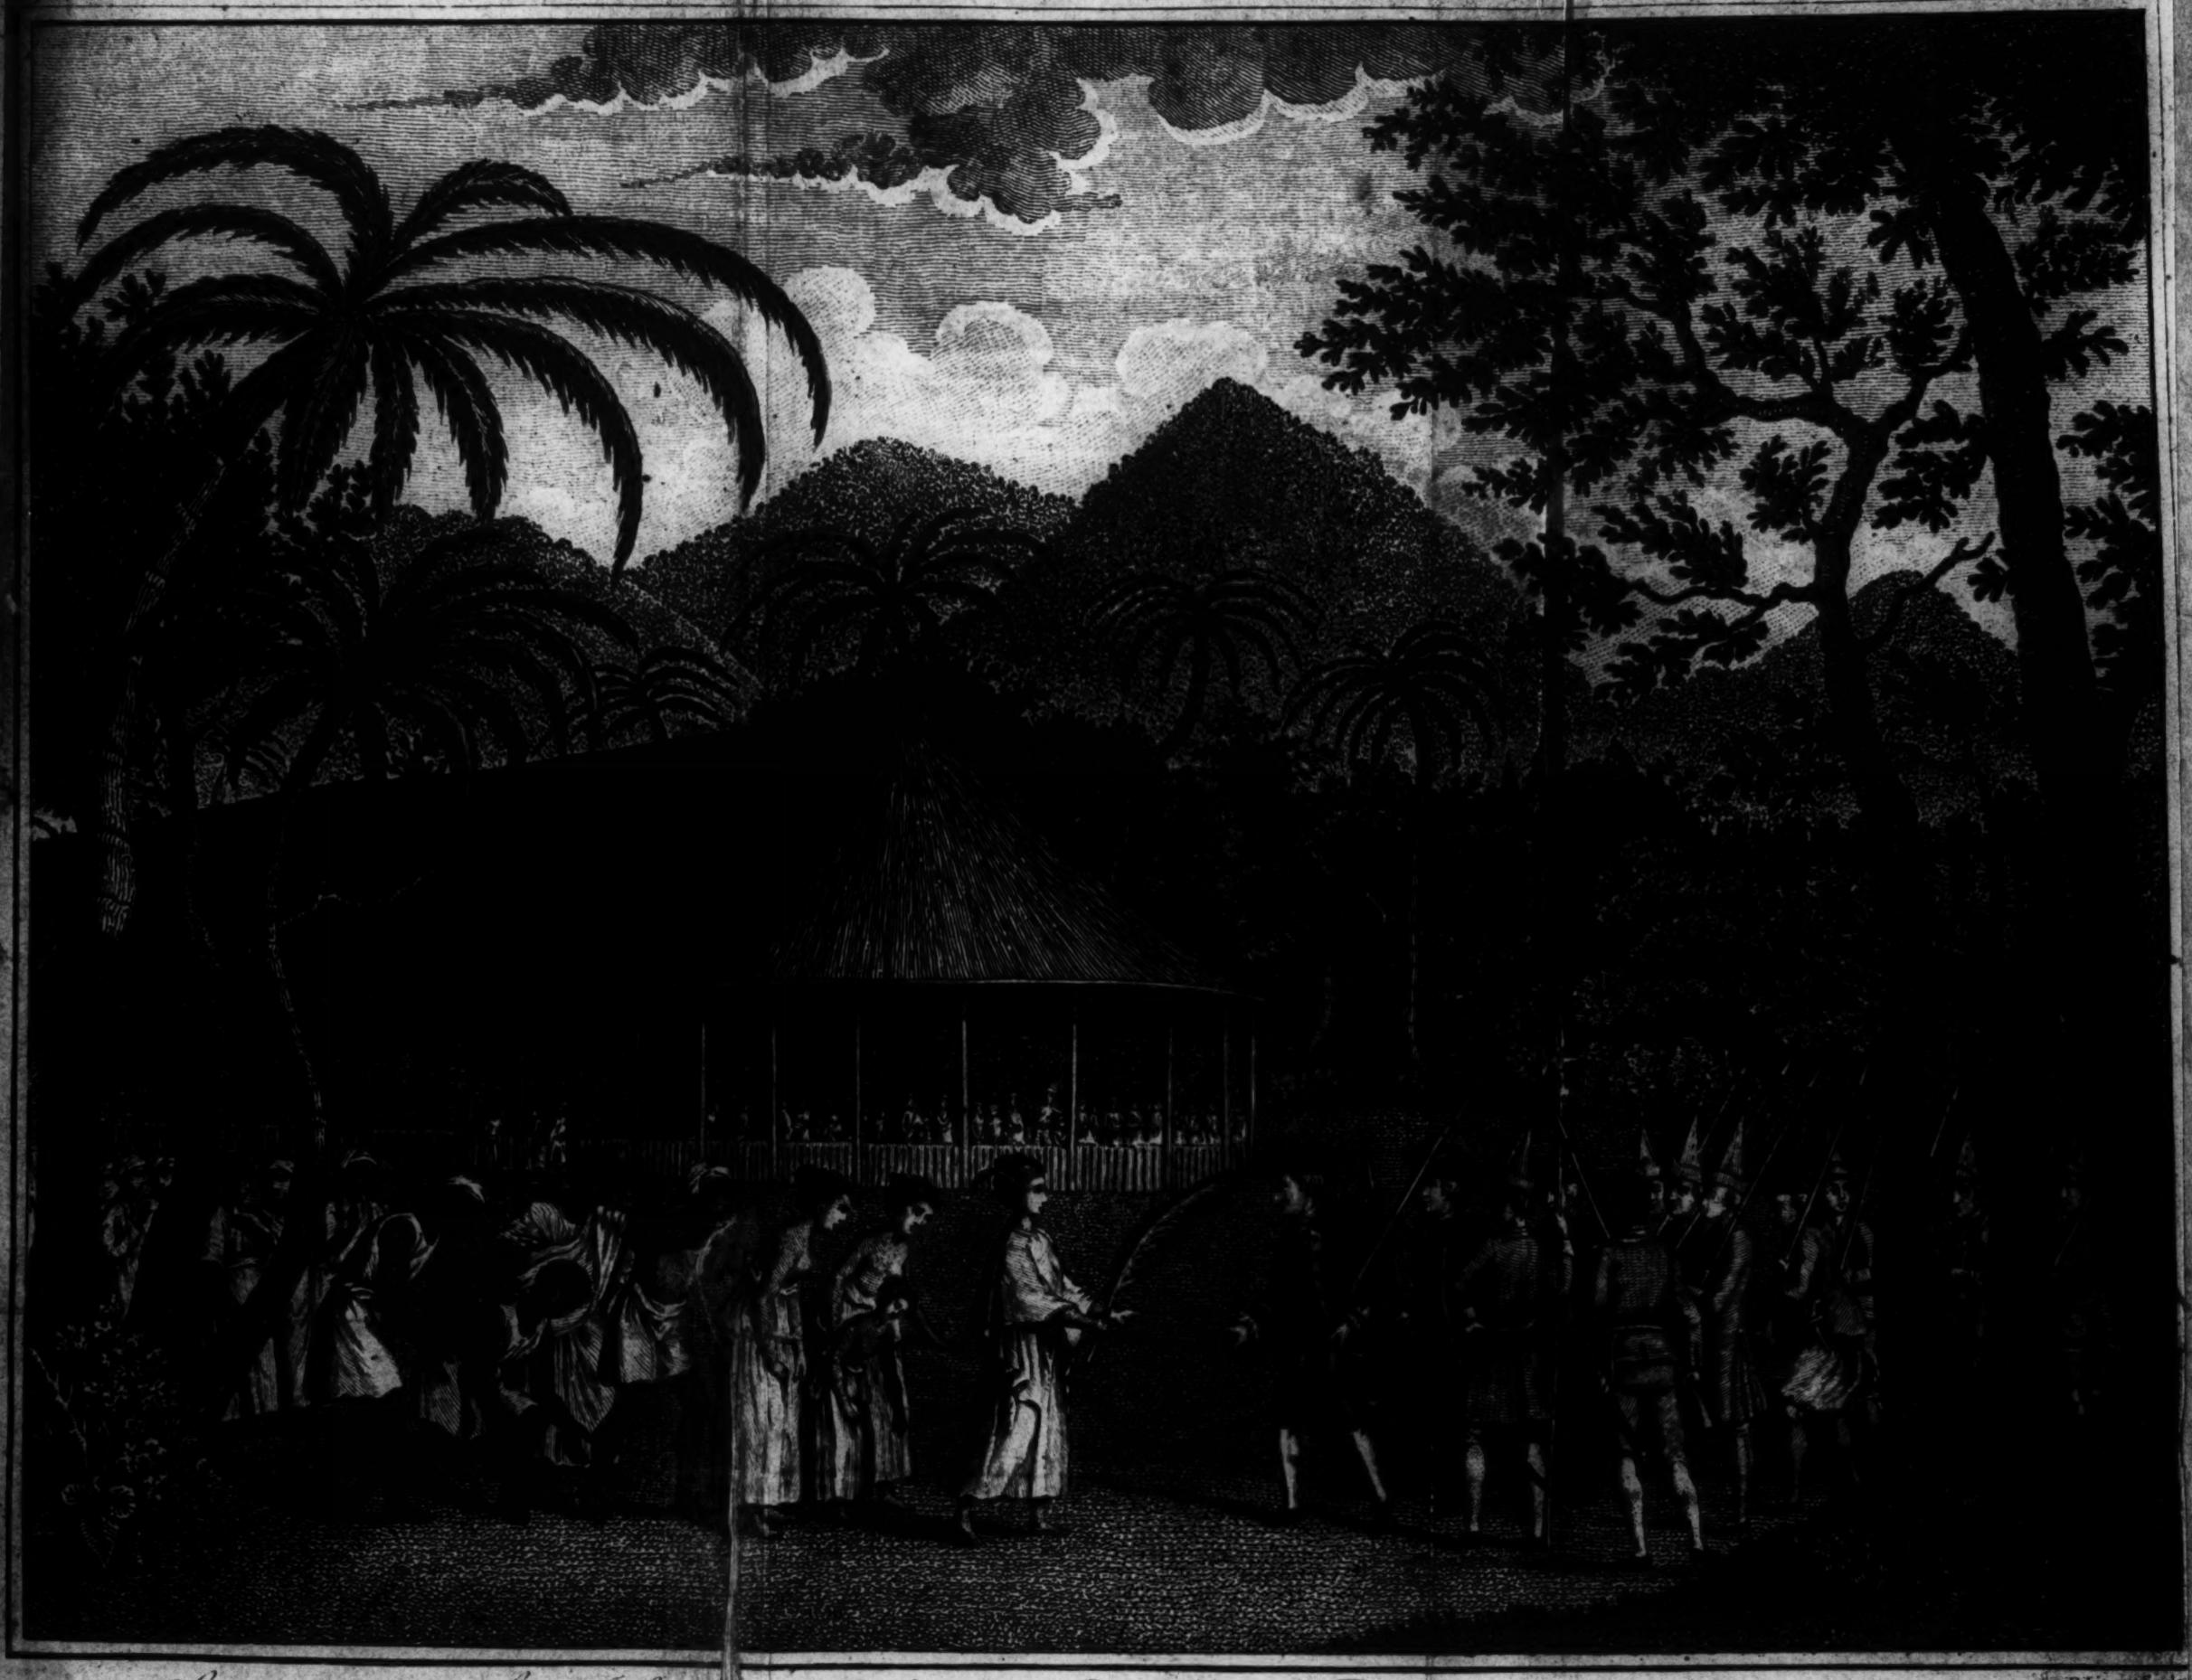

norn us, almost without number.

110

On Monday 20. we continued to trade with good fi cess, but in the afternoon it was discovered that Fran Pickney, one of the feamen, had drawn the cleats to wh the main sheet was belayed, and, after stealing the spik thrown them over board. Having fecured the offender called all the people together upon the deck, and after king fome pains to explain his crime, with all its aggra tions, I ordered that he should be whipt with nettles, wh he ran the gauntlet thrice round the deck: my rhetor however, had very little effect, for most of the crew bei equally criminal with himself, he was handled so tender that others were rather encouraged to repeat the offence the hope of impunity, than deterred by the fear of puni ment. To preferve the thip, therefore, from being pul to pieces, and the price of refreshments from being rail to high as foon to exhaust our articles of trade, I order that no man except the wooders and waterers, with th

guard should be permitted to go on shore.

On Tuesday 21. the queen came again on board, a brought several large hogs as a present, for which, as usu fhe would accept of no return. When she was about leave the ship, she expressed a desire that I should go shore with her, to which I consented, taking several of t officers with me. When we arrived at her house, she ma ns all fit down, and taking off my hat, she tied to it a bun or tuft of feathers of various colours, fuch as I had feen person on shore wear but herself, which produced by means a disagreeable effect. She also tied round my h and the hats of those who were with me, wreathes of bra ed or plaited hair, and gave us to understand that both t hair and workmanship were her own: she also presented with fome matts, that were very curiously wrought. the evening the accompanied us back to the beach, a when we were getting into the boat, she put on board fine large fow hig with young, and a great quantity of fru As we were parting, I made figns that I should quit t island in seven days: she immediately comprehended t meaning, and made figns that I should stay twenty day that I should go two days journey into the country, it there a few days, bring down plenty of hogs and poultr and after that leave the island. I again made signs that finds a a be e e il il e h a fu t a ma h a t d a re t a man 

Surrender of the Island of Ctaheite to Captain Wallis by the Supposed Queen Obereal

MITHER ASSESSED OF ETERNISHES AND SERVE OF THE SERVEST

It was not without great difficulty that she was pacified. The next morning, Wednesday 22 the gunner sent off less than twenty hogs, with great plenty of fruit. Our cks were now quite full of hogs and poultry, of which e killed only the small ones, and kept the others for sea tres; we found, however, to our great mortification, at neither the sowls nor the hogs could, without great sileuity, be brought to eat any thing but fruit, which ade it necessary to kill them safter than we should otherise have done: two, however, a boar and a sow, were ought alive to England, of which I made a present to be Stephens, Secretary to the Admiralty; the sow afterards died in pigging, but the boar is still alive.

On Thursday 23 we had very heavy rain, with a storm wind that blew down several trees on shore, though

ry little of it was felt where the ship lay.

The next day, Friday 24. I sent the old man, who had en of great service to the gunner at the market tent, aother iron pot, some hatchets and bills, and a piece of oth. I also sent the queen two turkies, two geese, three unea hens, a cat big with kitten, some china, looking? alles, glass bottles, shirts, needles, thread, cloth, ribands, as, some small white kidney beans, called callivances, ad about fixteen different forts of garden feeds, and a ovel, besides a considerable quantity of cutlery wares, infifting of knives, scissars, bill-hooks, and other things. We had already planted several forts of the garden feeds, ad some peas in several places, and had the pleasure to see em come up in a very flourishing state, yet there were remains of them when Captain Cook left the island. I nt her also two iron pots, and a few spoons.' In return these things, the gunner brought off eighteen hogs, d some fruit.

In the morning, Saturday 25. I ordered Mr Gore, me of the mates, with all the marines, forty seamen, and our midshipmen, to go up the valley by the river as they ould, and examine the soil and produce of the country, noing the trees and plants which they should find, and when key saw any stream from the mountains, to trace it to its surce, and observe whether it was tinctured with any micral or ore. I cautioned them also to keep continually Vol. I.

upon their guard against the natives, and directed them to make a fire, as a fignal, if they should be attacked. the same time I took a guard on shore, and erected a ten on a point of land, to observe an eclipse of the sun, which, the morning being very clear, was done with great accuracy, Hours. Min. Sec.

The immersion began, by true time, at 6 51 50 The emersion, by true time, was at The duration of the eclipse was. 10

The latitude of the point, on which the observation was made, was 17° 30' S., the sun's declination was 19° 40'

N., and the variation of the needle 50 36' E.

After the observation was taken, I went to the queen's house, and shewed her the telescope, which was a reflector. After the had admired its structure, I endeavoured to make her comprehend its use, and fixing it so as to command several distant objects, with which she was well acquainted. but which could not be distinguished with the naked eye, I made her look through it. As foon as the faw them the ftarted back with aftonishment, and directing her eye as the glass was pointed, stood some time motionless and silent; she then looked through the glass again, and again fought in vain, with the naked eye, for the objects which it discovered. As they by turns vanished and re-appeared her countenance and gestures expressed a mixture of wonder and delight which no language can describe. When the glass was removed, I invited her, and several of the Chiefs that were with her, to go with me on board the ship, in which I had a view to the security of the party that I had sent out; for I thought that while the queen, and the principal people were known to be in my power nothing would be attempted against any person belonging to the ship on shore. When we got on board, I ordered a good dinner for their entertainment, but the queen would neither eat nor drink; the people that were with her eat very heartily of whatever was fet before them, but would drink only plain water.

In the evening our people returned from their excursion, and came down to the beach, upon which I put the queen and her attendants into the boats, and fent them on shore. As the was going over the thip's side, the asked, by signs, the whether I still perfished in my resolution of leaving the its

## CHAP. VII.

An Account of an Expedition to discover the inland Part of the Country, and our other Transactions, till we quitted the Istand to continue our Voyage.

A FTER the mate came on board, he gave me a written account of his expedition, to the following effect :

"At four o'clock in the morning of Saturday the 25th of June, I landed, with four midshipmen, a serjeant and twelve marines, and twenty four feamen, all armed, besides four, who carried hatchets and other articles of traffic, and four who were loaded with ammunition and provisions, the rest being left with the boat: every man had his day's allowance of brandy, and the hatchet men two small kegs, to give out when I should think proper.

"As foon as I got on shore, I called upon our old man, and took him with us: we then followed the course of the river in two parties, one marching on each side. For the first two miles it flowed through a valley of considerable width, in which were many habitations, with gardens walled in. and abundance of hogs, poultry, and fruit; the foil here seemed to be a rich fat earth, and was of a blackish colour. After this the valley became very narrow, and the ground riling abruptly on one fide of the river, we were all obliged to march on the other. Where the stream was precipitated from the hills, channels had been cut to lead the water into gardens and plantations of fruit trees: in these gardens we found an herb which had never been brought down to the water fide, and which we perceived the inhabitants eat raw. I tasted it, and found it pleasant, the its flavour somewhat resembling that of the West Indian

spinnage, called Calleloor, though its leaf was very differ. and ent. The ground was fenced off fo as to make a very pretty appearance; the bread fruit and apple-trees were tain. planted in rows on the declivity of the hills, and the co-ches coa nut and plantain, which require more moisture, on the nies. level ground: under the trees, both on the sides and at down the foot of the hills, there was very good grafs, but no with underwood. As we advanced, the windings of the stream became innumerable, the hills on each side swelled into mountains, and vast crags every where projected over our heads. Travelling now became difficult, and when we proceeded about four miles, the road for the last mile having been very bad, we fat down to rest ourselves, and take the refreshment of our breakfast; we ranged ourtelves upon the ground under a large apple tree, in a very pleafant spot; but just as we were about to begin our repast, we were fuddenly alarmed by a confused sound of many voices, and a great shouting, and presently afterwards saw a multitude of men, women and children upon the hill above us; our old man feeing us rife haftily, and look to our arms, beckoned us to fit still, and immediately went up to the people that had surprised us. As soon as he joined them they were filent, and foon after disappeared; in a short time, however, they returned, and brought with them a large hog ready roasted, with plenty of breadtruit, yams, and other refreshments, which they gave to the old man, who distributed them among our people. In return for this treat, I gave them some nails, buttons, and other things, with which they were greatly delighted. of t After this we proceeded up the valley as far as we could, wer fearching all the runs of water, and all the places where the water had run, for appearances of metal or ore, but could thic find none, except what I have brought back with me. I shewed all the people that we met with, the piece of saltpetre which had been picked up in the island, and which I had taken with me for that purpose, but none of them took any notice of it, nor could I learn from them any thing about it. The old man began now to be weary, and spri there being a mountain before us, he made figns that he would go home: before he left us, however, he made the people who had so liberally supplied us with provisions, take the baggage, with the fruit that had not been eaten 23 4 1: 1 a 1

ffer. and some cocoa-nut shells full of fresh water, and made very figns that they should follow us up the side of the mounvere tain. As foon as he was gone, they gathered green branco. ches from the neighbouring trees, and with many ceremothe nies of which we did not know the meaning, laid them at down before us: after this they took some small berries no with which they painted themselves red, and the bark of eam tree that contained a yellow juice, with which they dained their garments in different parts. We began to our climb the mountain while our old man was kill in fight, we and he, perceiving that we made our way with difficulty ha. through the weeds and brush-wood, which grew very and thick, turned back, and faid fomething to the natives in a lves firm loud tone; upon which twenty or thirty of the men lea. went before us, and cleared us a very good path; they aloast, so refreshed us with water and fruit as we went along, and any affited us to climb the most difficult places, which we saw should otherwise have found altogether impracticable. We began to ascend this hill at the distance of about fix to miles from the place where we landed, and I reckoned the ent top of it to be near a mile above the river that runs thro? he the valley below. When we arrived at the summit, we a-ed; gain sat down to rest and refresh ourselves. While we ght were climbing we flattered ourselves that from the top we ead. Mould command the whole island, but we now saw mounto tains before us fo much higher than our fituation, that In with respect to them we appeared to be in a valley; toand wards the ship indeed the view was enchanting: the sides ted. of the hills were beautifully clothed with wood, villages uld, were every where interspersed, and the vallies between them afforded a still richer prospect; the houses stood ould thicker, and the verdure was more luxuriant. We faw very few habitations above us, but discovered smoke in falt- many places ascending from between the highest hills that nich were in fight, and therefore I conjectured that the most nem relevated parts of the country are by no means without inhabitants. As we ascended the mountain, we saw many and springs gush from fiffures on the side of it, and when we he had reached the fummit, we found many houses that we the did not discover as we passed them. No part of these ons, mountains is naked; the fummits of the highest that we ten could see were crowned with wood, but of what kind I U 3 know

l a-

I

any

and

know not: those that were of the same height with that to g which we had climbed, were woody on the fides, but on day the fummit were rocky and covered with fern. Upon the with flats that appeared below these, there grew a sedgy kind othe of grass and weeds: in general the soil here, as well as in A the valley, seemed to be rich. We saw several bushes of quee fugar cane, which was very large and very good, growing prese wild, without the least culture. I likewise found ginger after and turmerick, and have brought samples of both, but hogs could not procure feeds of any tree, most of them being ted in bloffom. After traverfing the top of this mountain to inha a good distance, I found a tree exactly like a fern, except try, that it was 14 or 15 feet high. This tree I cut down, by t and found the infide of it also like a fern : I would have Abo brought a piece of it with me but found it two cumber- again some, and I knew not what difficulties we might meet by a with before we got back to the ship, which we judged to be with now at a great distance. After having again recruited our on l Arrength by refreshment and rest, we began to descend the frui mountain, being still attended by the people to whose care day we had been recommended by our old man. We kept our wou general direction towards the ship, but sometimes deviated fow a little to the right and left in the plains and vallies. when of h we faw any houses that were pleasantly situated, the inhabitants being every where ready to accommodate us into with whatever they had. We faw no beast except a few who hogs, nor any birds, except parrots, parroquets, and green and doves; by the river, however, there was plenty of ducks con and every place that was planted and cultivated, appeared boa to flourish with great luxuriance, though in the midst of ty what had the appearance of barren ground. I planted the she Rones of peaches, cherries, and plums, with a great va- dov ricty of garden feeds, where I thought it was most probatexe ble they would thrive, and limes, lemons, and oranges, in eve fituations which resembled those in which they are found the in the West Indies. In the afternoon, we arrived at a verma ry pleasant spot, within about three miles of the ship, about where we procured two hogs and some fowls, which the boy natives dreffed for us very well, and with great expedition per Here we continued till the cool of the evening, and there mi made the best of our way for the ship, having liberally re he warded our guides, and the people who had provided up ret that to good a dinner. Our men behaved through the whole day with the greatest decency and order, and we parted with our Indian friends in perfect good humour with each other."

About 10 o'clock the next morning, Sunday 26. the queen came on board according to her promise, with a ving present of hogs and fowls, but went on shore again soon ger afterwards. This day, the gunner lent off near thirty but hogs with great plenty of fowls and fruit. We compleeing ted our wood and water, and got all ready for fea. More to inhabitants came down to the beach, from the inland country, than we had feen before, and many of them appeared, by the respect that was paid them, to be of a superior rank. have About three o'clock in the afternoon, the queen came ber- again down to the beach, very well dreffed, and followed neet by a great number of people. Having crossed the river o be with her attendants and our old man, the came once more our on board the ship. She brought with her some very fine the fruit, and renewed her solicitation, that I would stay ten care days longer, with great earnestness, intimating that she our would go into the country and bring me plenty of hogs, ated fowls, and fruit. I endeavoured to express a proper sense then of her kindness and bounty, but assured her that I should certainly sail the next morning. This, as usual, threw her into tears, and after she recovered, she enquired by signs few when I should return: I endeavoured to express fifty days, reen and the made figns for thirty: but the fign for fifty being cks constantly repeated, she seemed satisfied. She stayed on ared board till night, and it was then with the greatest difficulty that she could be prevailed upon to go on shore. When the she was told that the boat was ready, she threw herself va- down upon the arm cheft, and wept a long time with an oba- excess of passion that could not be pacified; at last, hows, in ever, though with the greatest reluctance, she went into ound the boat, and was followed by her attendants and the old a ver man. The old man had often intimated that his son, a lad ship, about fourteen years of age, should go with us, and the the boy feemed to be willing: he had, however, now difaption peared for two days; I inquired after him when I first ther missed him, and the old man gave me to understand that y re he was gone into the country to see his friends, and would d we return time enough to go with us; but I have reason to think

think that, when the time drew near, the father's courage derne failed, and that to keep his child he secreted him till the my e

thip was gone, for we never faw him afterwards.

At break of day, Monday 27. we unmoored, and at E. 1 the same time I sent the barge and cutter to fill the few 10' S water casks that were now empty. When they came near the shore, they saw, to their great surprise, the whole beach covered with inhabitants, and having some doubt whether it would be prudent to venture themselves among fuch a multitude, they were about to pull back again for the ship. As soon as this was perceived from the shore, the queen came forward, and beckoned them; at the fame A me time gueffing the reason of what had happened, she made the natives retire to the other fide of the river; the boats then proceeded to the shore, and filled the casks; in the H mean time the put fome hogs and fruit on board, and when they were putting off would fain have returned with of its them to the ship. The officer, however, who had received orders to bring off none of the natives, would not permit her; upon which the presently launched a double ca- of n noe, and was rowed off by her own people. Her cance migh was immediately followed by fifteen or fixteen more, and T all of them came to the ship. The queen came on board, tive, but not being able to speak, she sat down and gave vent to al, i her passion by weeping. After she had been on board a- als a bout an hour, a breeze springing up, we weighed anchor to 5 and made fail. Finding it now necessary to return into those her canoe, the embraced us all in the most affectionate who manner, and with many tears; all her attendants also exthe canoes returned to the ship, and that which had the queen on board came up to the gun room port, where her of the people made it fast. In a few minutes the came into the loof bow of her canoe, where the fat weeping with inconfola-both ble forrow. I gave her many things which I thought yet would be of great use to her, and some for ornament; she com filently accepted of all, but took little notice of any thing. cuft About 10 o'clock we were got without the reef, and a root fresh breeze springing up, our Indian friends, and particu-won larly the queen, once more bade us farewel, with such ten-tiful dernels ame

Roya

and The inhabitants of this island are a stout, well-made, acard, tive, and comely people. The stature of the men, in geneat to al, is from 5 feet 7 to 5 feet 10 inches, tho' a few individua als are taller, and a few shorter; that of the women from 5 there to 5 feet 6. The complexion of the men is tawney, but those that go upon the water are much redder than those nate who live on shore. Their hair in general is black, but in ex- some it is brown, in some red, and in others flaxen, which fell is remarkable, because the hair of all other natives of Asia, Africa, and America, is black, without a single exception. the It is generally tied up, either in one bunch, in the middle her of the head, or in two, one on each fide, but some wear it the loofe, and it then curls very strongly: in the children of ola- both sexes it is generally flaxen. They have no combs, ight yet their hair is very neatly dreffed, and those who had the combs from us, made good use of them. It is an universal ing. custom to anoint the head with cocoa-nut oil, in which a da not has been scraped that smells something like roses. The icu- women are all handsome, and some of them extremely beauten-tiful. Chastity does not seem to be considered as a virtue nels among them, for they not only readily and openly traffick-

ed with our people for personal favours, but were brough the we down by their fathers and brothers for that purpose: the che were, however, conscious of the value of beauty, and the ersons fize of the nail that was demanded for the enjoyment of the pal a lady, was always in proportion to her charms. The me filed t who came down to the fide of the river, at the same time, w that they presented the girl, shewed a stick of the fize of the im by other nail that was to be her price, and if our people agreed, fi was fent over to them, for the men were not permitted t cross the river. This commerce was carried on a consider able time before the officers discovered it, for while som ming pople straggled a little way to receive the lady, the others kep a look out. When I was acquainted with it, I no long on a er wondered that the ship was in danger of being pulled to the pieces for the nails and iron that held her together, which I had before puzzled myself to account for in vain, the whole ship's company having daily as much fresh provision outh and fruit as they could eat. Both men and women are no only decently but gracefully clothed, in a kind of whit cloth, that is made of the bark of a shrub, and very mie h, b ur f resembles coarse China paper Their dress consists of two pieces of this cloth: one of them, a hole having been mad ricea in the middle to put the head through, hangs down from the shoulders to mid-leg before and behind; another piece as which is between four and five yards long, and about on the r yard broad, they wrap round the body in a very easy man age ner. This cloth is not woven, but is made, like paper, o ell i the macerated fibres of an inner bark, spread out and beat at the en together. Their ornaments are feathers, flowers, piece ave of shells, and pearls: the pearls are worn chiefly by the would he men, from whom I purchased about two dozen of a small fize: they were of a good colour, but were all spoiled by boring. Mr Furneaux faw feveral in his excursion to the west, but he could purchase none with any thing he had to offer. I observed, that it was here a universal custon both for men and women to have the hinder part of their thighs and loins marked very thick with black lines in various forms. These marks were made by striking the teeth of an instrument, somewhat like a comb, just through the skin, and rubbing into the punctures a kind of pass made of foot and oil, which leaves an indelible stain. The boys and girls under twelve years of age are not marked bu

ugh the observed a few of the men whose legs were marked. the chequers by the same method, and they appeared to be th rooms of Superior rank and authority. One of the prinf the pal attendants upon the queen, appeared much more difme fed to imitate our manners than the rest; and our peotime, with whom he foon became a favourite, distinguished, f the m by the name of Jonathan. This man, Mr Furneaux. , the othed completely in an English dress, and it sat very eaupon him. Our officers were always carried on shore, ider being shoal water where he landed, and Jonathan, alfom ming new state with his new finery, made some of his, kep cople carry him on shore in the same manner. He very ong on attempted to use a knife and fork at his meals, but at at the other when he had stuck a morsel upon his fork, and tried; hic feed himself with that instrument, he could not guide, the but by the mere force of habit his hand came to his ifio wouth, and the victuals at the end of the fork went away

whit Their food confifts of pork, poultry, dog's flesh, and h, bread-fruit. bananas, plantains, yams, apples, and a, two or fruit, which, though not pleasant by itself. gives an mad reeable relish to roasted bread fruit, with which it is frefrom mently beaten up. They have abundance of rats, but, as; iece ras I could discover, these make no part of their food. on he river affords them good mullet, but they are neither man me nor in plenty. They find conchs, mussels, and other et, o dl fish on the reef, which they gather at low water and beat at raw with bread fruit before they come on shore. They icce we also very fine cray-fish, and they catch with lines, would hooks of mother of pearl, at a little distance from the hich they are so fond that we could seldom prevail upon the em to sell us a few at any price. They have also nets of had enormous fize, with very small meshes, and with these fton bey catch abundance of smal! fish about the fize of farmes; but while they were using both nets and lines with reat success, we could not catch a fingle fish with either. le procured some of their hooks and lines, but for want, their art we were still disappointed.

The manner in which they dress their food is this; they indle a fire by rubbing the end of one piece of dry wood, ked pon the fide of another, in the same manner as our car-

penters

penters whet a chiffel; then they dig a pit about half foot deep, and two or three yards in circumference: they pave the bottom with large pebble stones, which they lay down very smooth and even, and then kindle a fire in it with dry wood, leaves, and the hulks of the cocoa-nut. When the stones are sufficiently heated, they take out the embers, and rake up the ashes on every side; then they cover the stones with a layer of green cocoa-nut tree leaves and wrap up the animal that is to be dreffed in the leaves of the plantain; if it is a small hog they wrap it whole, if a large one they split it. When it is placed in the pit they cover it with the hot embers, and lay upon them bread-fruit and yams, which are also wrapped up in the leaves of the plantain; over these they spread the remainder of the embers, mixing among them some of the ho stones, with more cocoa nut tree leaves upon them, and then close all up with earth, fo that the heat is kept in After a time proportioned to the fize of what is dreffing the oven is opened, and the meat taken out, which is tender, full of gravy, and in my opinion, better in every re spect than when it is dressed any other way. Excepting the fruit, they have no fauce but falt water, nor any knive but shells, with which they carve very dexterously, always cutting from them. It is impossible to describe the altonishment they expressed when they saw the gunner, who while he kept the market, used to dine on shore, dress hi pork and poultry by boiling them in a pot, having, as have before observed. no vessel that would bear the fire they had no idea of hot water or of its effects: but from the time that the old man was in possession of an iron pot alread he and his friends eat boiled meat every day. The iron within pots which I afterwards gave to the queen and feveral o unco the Chiefs, were also in constant use, and brought as many on po people together, as a monster or a puppet show in a coun the n try fair. They appeared to have no liquor for drinking with but water, and to be happily ignorant of the art of fer we co menting the juice of any vegetable, so as to give it an in The toxicating quality: they have, as has been already observed well the sugar-cane, but they seemed to make no other use o to be break a piece off when they happen to pass by a place odif where it is growing.

as I

Of their domestic life and amusements, we had not sufficient opportunity to obtain much knowledge, but they appear sometimes to have wars with each other, not only from their weapons, but the scars with which many of them were marked, and some of which appeared to be the remains of very confiderable wounds, made with stones, bludgeons, or some other obtuse weapon: by these scars also they appear to be no inconsiderable proficients in surgery, of which indeed we happened to have more direct evidence. One of our seamen, when he was on shore, run a large splinter into his foot, and the surgeon being on board, one of his comrades endeavoured to take it out with a pen-knife; but after putting the poor fellow to a good deal of pain, was obliged to give it over. Our good old Indian, who happened to be present, then called over one of his countrymen that was standing on the opposite side of the river, who having looked at the seaman's foot, went immediately down to the beach, and taking up a hell, broke it to a point with his teeth; with this instrument, in little more than a minute, he laid open the place, and extracted the splinter; in the mean time the old man, who, as foon as he had called the other over, went a little way into the wood, returned with some gum, which he applied to the wound upon a piece of the cloth that was wrapped round him, and in two days time it was perfectly healed. We afterwards learned that this gum was produced by the apple tree, and our furgeon procured some of fire it, and used it as a vulnerary ballam with great success.

from The habitations of these happy people I have described pot already; and besides these, we saw several sheds inclosed iros within a wall, on the outfide of which there were feveral al o uncouth figures of men, women, hogs, and dogs, carved the natives were from time to time seen to enter these places, king with a slow pace and dejected countenance, from which fer we conjectured that they were repositories of the dead. n in The area within the walls of these places, was generally rved well paved with large round stones, but it appeared not fe o to be much trodden, for the grass every where grew up only between them. I endeavoured, with particular attention,

them, but never could find the least traces of any. O Vol. I.

The

The boats or canoes of these people are of three different forts. Some are made out of a fingle tree, and carry from two to fix men: these are used chiefly for fishing, and we constantly saw many of them busy upon the reef: some were constructed of planks, very dexterously sewed toge ther: these were of different fizes, and would carry from ten to forty men. Two of them were generally lashed to gether, and two masts set up between them; if they were fingle, they had an out-rigger on one fide, and only one mast in the middle. With these vessels they sail far beyond the fight of land, probably to other islands, and bring home plantains, bananas, and yams, which feem also to be more plenty upon other parts of this island, than that off which the ship lay. A third fort seem to be intended principally for pleasure and show: they are very large, but have no fail, and in shape resemble the gondolas of Venice: the middle is covered with a large awning, and some of the people sit upon it, some under it. None of these vessels came near the ship, except on the 1st and 2d day after our arrival; but we law three or four times a week, a procession of eight or ten of them passing at a distance, with streamers flying, and a great number of small canoes at tending them, while many hundreds of people ran a break of them along the shore. They generally rowed to the outward point of a reef which lay about four miles to the westward of us, where they stayed about an hour, and then returned. These processions, however, are never made but in fine weather; and all the people on board are dreffed; though in the other canoes they have only a piece of cloth wrapped round their middle. Those who rowed and steered were dressed in white; those who sat upon the awning and under it in white and red, and two men who were mounted on the prow of each vessel, were dressed in red only. We fometimes went out to observe them in our boats, and though we were never nearer than a mile, we faw them with our glasses as distinctly as if we had been upon the fpot.

The plank of which these vessels are constructed, is made by splitting a tree, with the grain, into as many thin picces as they can. They first fell the tree with a kind of hatchet, or adze, made of a tough greenish kind of stone, very dexterously fixed into a handle; it is then cut into

such lengths as are required for the plank, one end of which is heated till it begins to crack, and then with wedges of hard wood they split it down: some of these planks are two feet broad, and from 15 to 20 feet long. The fides are smoothed with adzes of the same materials and construction, but of a smaller size. Six or eight men are sometimes at work upon the same plank together, and, as their tools presently lose their edge, every man has by him a cocoa nut shell filled with water, and a flat stone, with which he sharpens his adze almost every minute. These planks are generally brought to the thickness of about an inch, and are afterwards fitted to the boat with the same exactness that would be expected from an expert joiner. To fasten these planks together, holes are bored with a piece of bone that is fixed into a stick for that purpose, a use to which our nails were afterwards applied with great advantage, and through these holes a kind of plaited cordage is passed, so as to hold the planks strongly together: the seams are caulked with dried rushes, and the whole outfide of the veffel is paid with a gummy juice, which some of their trees produce in great plenty, and which is a very good succedaneum for pitch.

The wood which they use for their large canoes, is that of the apple tree, which grows very tall and straight. Several of them that were measured, were near eight seet in the girth, and from 20 to 40 to the branches, with very little diminution in the size. Our carpenter said, that in other respects it was not a good wood for the purpose, being very light. The small canoes are nothing more than the hollow trunk of a bread-fruit tree, which is still more light and spongy. The trunk of the bread-fruit tree is

fix feet in girth, and about 20 feet to the branches.

Their principal weapons are stones, thrown either with the hand or sling, and bludgeons; for though they have bows and arrows, the arrows are only sit to knock down a bird, none of them being pointed, but headed only with a round slone.

I did not see one turtle all the while I lay off this island, but upon shewing some small ones which I brought from Queen Charlotte's Island, to the inhabitants, they made signs that they had them of a much larger size. I very much regretted my having lost our he goat, which

K 2

died

died soon after we left St Iago, and that neither of our she goats, of which we had two, were with kid. If the he goat had lived, I would have put them all on shore at this place, and I would have left a she goat here if either of them had been with kid; and I doubt not, but that in a few years they would have stocked the island.

The climate here appears to be very good, and the island to be one of the most healthy as well as delightful spots in the world. We saw no appearance of discase among the inhabitants. The hills are covered with wood, and the vallies with herbage; and the air in general is so pure, that notwithstanding the heat, our fish meat kept very well two days, and our fish one. We met with no frog, toad, scorpion, centipied, or serpent of any kind: and the only troublesome insects that we saw were ants, of which there were but sew.

The fouth east part of the island seems to be better cultivated and inhabited than where we lay, for we saw every day boats come round from thence laden with plantains and other fruit, and we always sound greater plenty, and a

lower price, foon after their arrival, than before.

The tide rifes and falls very little, and being governed by the winds, is very uncertain; though they generally blow from the E. to the S. E. and for the most part a pleafant breeze.

The benefit that we received while we lay off this island, with respect to the health of the ship's company, was beyond our most sanguine expectations, for we had not now an invalid on board, except the two lieutenants and myfelf, and we were recovering, though still in a very seeble condition.

It is certain that none of our people contracted the venereal disease here, and therefore, as they had free commerce with great numbers of the women, there is the greatest probability that it was not then known in the country. It was, however, found here by Captain Cook, in the Endeavour, and as no European vessel is known to have visited this island before Captain Cook's arrival, but the Dolphin, and the Boudeuse and Etoil, commanded by M. Bougainville, the reproach of having contaminated with that dreadful pest, a race of happy people, to whom its miseries had till then been unknown, must be due ei-

It is well known that the furgeon on board his Majesty's ships keeps a list of the persons who are sick on board, specifying their diseases, and the times when they came under his care, and when they were discharged. It happened that I was once at the pay-table on board a ship, when several sailors objected to the payment of the surgeon, alledging, that although he had discharged them from the lift, and reported them to be cured, yet their cure was incomplete. From this time, it has been my constant practice when the surgeon reported a man to be cured, who had been upon the fick lift, to call the man before me, and ask him whether the report was true: if he alledged that any symptoms of his complaint remained, I continued him upon the lift; if not, I required him, as a confirmation tion of the surgeon's report, to sign the book, which was always done in my presence. A copy of the sick list on board the Dolphin, during this voyage, figured by every man in my presence, when he was discharged well, in confirmation of the furgeon's report, written in my own hand, and confirmed by my affidavit, I have deposited in the Admiralty; by which it appears, that the last man on board the ship, in her voyage outward, who was upon the fick list for the venereal disease, except one who was sent to England in the Store ship, was discharged cured, and figned the book on the 27th of December 1766, near fix months before our arrival at Otaheite, which was on the 19th of June 1767; and that the first man who was upon the lift for that disease, in our return home, was entered on the 26th of February 1768, fix months after we left the island, which was on the 26th of July 1767; so that the ship's company was entirely free fourteen months within one day, the very middle of which time we spent at Otaheite; and the man who was first entered as a venereal patient, on our return home, was known to have contracted the disease at the Cape of Good hope, where we then lay.

## CHAP. IX.

Passage from Otaheite to Tinian, with some Account of several other Islands that were discovered in the South Seas.

MONDAY 27. Having made sail from King George the Third's Island, we proceeded along the shore of the Duke of York's Island, at the distance of about two miles. There appeared to be good bays in every part of it, and in the middle a fine harbour; but I did not think it worth while to go on shore. The middle and west end is very mountainous, the east end is lower, and the coast just within the beach is covered with cocoa nut, bread-

fruit, apple, and plantain trees.

At day light, the next morning, Tuesday 28. we saw land, for which we made sail, and ran along the lee side of it. On the weather side there were very great breakers, and the lee-side was rocky, but in many places there appeared to be good anchorage. We saw but sew inhabitants, and they appeared to live in a manner very different from those of King George's Island, their habitations being only small huts. We saw many cocoa nut and other trees upon the shore; but all of them had their heads blown away, probably in a hurricane. This island is about six miles long, and has a mountain of considerable height in the middle, which seems to be fertile. It lies in latitude 17° 28' S., and longitude, by our last observation, 151° W. and I called it Sir Charles Saunders's Island.

On Wednesday 29. the variation of the compass, by azimuth, was 7° 52' E.; and early the next morning, at day-break, we saw land bearing from N. by E. to N. W. We stood for it, but could find no anchorage, the whole island being surrounded by breakers. We saw smoke in two places, but no inhabitants. A few cocoa-nut trees were growing on the lee-part of it, and I called it Lord How's Island. It is about ten miles long, and four broad, and lies in latitude 16° 46' S., longitude, by observation, 154°

In the afternoon, we saw land bearing W. by N. and dood for it. At five o'clock, we saw breakers running a

great way to the fouthward, and foon after, low land to the S. W. and breakers all about it in every direction.

We turned to windward all night, and as soon as it was light, crowded sail to get round these shoals. At nine we got round them, and named them Sicily Islands. They are a group of islands or shoals extremely dangerous; for in the night, however clear the weather, and by day, if it is hazy, a ship may run upon them without seeing land. They lie in latitude 16° 28' S., longitude 155°

We continued to steer our course westward, till day-break on Thursday, August 31. when we saw land bearing W. by S. and hauled towards it. At 11 o'clock in the forenoon, we saw more land in the W. S. W. At noon, the first land that we saw, which proved to be an island, bore W. ½ S. distant about sive leagues, and had the appearance of a sugar-loaf; the middle of the other land, which was also an island, and appeared in a peak, bore W. S. W. distant six leagues. To the first, which is nearly circular, and three miles over, I gave the name of Boscawen's Island; and the other, which is three miles and a half long, two broad, I called Keppel's Isla. Port royal at this time bore E. 4° 10' S., distant 478 leagues.

Bescawen's Island, we saw several of the inhabitants: but Keppel's Isle being to windward, and appearing more likely to afford us anchorage, we hauled up for it. At six, it was not more than a mile and a half distant, and, with our glasses, we saw many of the inhabitants upon the beach; but there being breakers at a considerable distance from the

hore, we stood off and on all night.

At four o'clock the next morning, we fent off the boats to found, and visit the island; and as soon as it was light, we ran down and lay over-against the middle of it. At noon, the boats returned, and reported that they had run within a cable's length of the island, but could find no ground: that seeing a reef of rocks lie off it, they had hauled round it, and got into a large deep bay which was full of rocks: that they then sounded without the bay, and sound anchorage from 14 to 20 sathom, with a bottom of sand and coral: that afterwards they went again into the

bay,

4

bay, and found a rivulet of good water, but the shore being rocky, went in fearch of a better landing place, which they found about half a mile farther, and went ashore. They reported also, that from the water to this landing. place, a good rolling way might be made for supplying the ship, but that a strong guard would be necessary, to prewent molestation from the inhabitants. They faw no hogs, but brought off two fowls and some cocoa nuts, plantains, and bananas. While the boats were on shore, two canoes came up to them with fix men: they feemed to be peaceably inclined, and were much the same kind of people as the inhabitants of King George's Island, but they were cloathed in a kind of matting, and the first joint of their little fingers had been taken off; at the same time about fifty more came down from the country, to within about an hundred yards of them, but would advance no farther. When our people had made what observations they could, they put off, and three of the natives from the canoes came into one of the boats, but when she got about half a mile from the shore, they all suddenly jumped overboard, and the self from publication a Iwam back again.

Having received this account, I considered that the watering here would be tedious, and attended with great fatigue: that it was now the depth of winter in the fouthern hemisphere, that the ship was leaky, that the rudder shook the stern very much, and that what other damage the might have received in her bottom could not be known. That for these reasons, she was very unfit for the bad weather which she would certainly meet with either in going round Cape Horn, or through the Streight of Magellan: that if the should get safely through the Streight, or round the Cape, it would be absolutely necessary for her to refresh in some port, but in that case no port would be in her reach; I therefore determined to make the best of my way to Tinian, Batavia, and so to Europe by the Cape of Good Hope. By this rout, as far as we could judge, we should still save our lives, as from this place to Batavia we should probably have a calm sea, and be not far from a port. The was a series of the series of the

In consequence of this resolution, at noon I bore away, and passed Boscawen's Island without visiting it. It is a high

We continued a W. N. W. course till 10 o'clock in the morning, Sunday 16. when we saw land bearing N. by E. and hauled up for it. At noon, we were within three leagues of it: the land within shore appeared to be high, but at the water side it was low, and had a pleasant appearance; the whole seemed to be surrounded by reess, that ran two or three miles into the sea. As we sailed along the shore, which was covered with cocoa-nut trees, we saw a sew huts, and smoke in several parts up the country. Soon after we hauled without a rees of rocks, to get round the lee-side of the island, and at the same time sent

out the boats to found, and examine the coast.

The boats rowed close along the shore, and found it rocky, with trees growing close down to the water-fide. These trees were of different forts, many of them very large, but had no fruit: on the lee-side, however, there were a few cocoa-nuts, but not a fingle habitation was to be feen. They discovered several small rills of water, which, by clearing, might have been made to run in a larger stream. Soon after they had got close to the shore, several canoes came up to them, each having fix or eight men on board. They appeared to be a robust, active people, and were quite naked, exept a kind of mat that was wrapped round their middle. They were armed with large maces or clubs, such as Hercules is represented with, two of which they fold to the master for a nail or two, and some trinkets. As our people had seen no animal, either bird or beaft, except sea-fowl, they were very desirous to learn of the natives whether they had either, but could not make themselves understood. It appears, that during this conference, a delign was formed to seize our cutter, for one of the Indians suddenly laid hold of her painter, and hauled her upon the rocks. Our people endeavoured, in vain, to make them desift, till they fired a musquet cross the nose of the man that was most active in the mischief. No hurt was done; but the fire and report so affrighted them, that they made off with great precipitation. Both

our boats then put off, but the water had fallen so suddenly that they found it very difficult to get back to the ship;
for when they came into deep water they found the point
of rocks standing up, and the whole reef, except in one
part, was now dry, and a great sea broke over it. The
Indians probably perceived their distress, for they turned
back, and followed them in their canoes all along the reef
till they got to the breach, and then seeing them clear,
and making way fast towards the ship, they returned.

About fix in the evening, it being then dark, the boats returned, and the master told me, that all within the rees was rocky, but that in two or three places, at about two cables' length without it, there was anchorage in 18, 14, and 12 sathom, upon sand and coral. The breach in the rees he found to be about 60 sathom broad, and here, if pressed by necessity, he said a ship might anchor or moor in 8 sathom; but that it could not be safe to moor with a

greater length than half a cable.

When I had hoisted the boats in, I ran down four miles to leeward, where we lay till the morning; and then, finding that the current had set us out of sight of the island, I made sail. The officers did me the honour to call this island after my name. Wallis's Island lies in latitude

13º 18' S., longitude 177° W.

As the latitudes and longitudes of all these islands are accurately laid down, and plans of them delivered in to the Admiralty, it will be easy for any ship, that shall hereaster navigate these seas, to find any of them, either to resresh or to make farther discoveries of their produce.

I thought it very remarkable, that although we found no kind of metal in any of these islands, yet the inhabitants of all of them, the moment they got a piece of iron in their possession, began to sharpen it, but made no such

attempt on brass or copper.

We continued to steer N, westerly, and many birds were from time to time seen about the ship, till Friday 28 when her longitude being, by observation, 187° 24' W. we crossed the line into North latitude. Among the birds that came about the ship, one which we caught exactly resembled a dove in size, shape, and colour. It had red legs, and was web footed. We also saw several plantain leaves, and cocoa-nuts, pass by the ship.

On Saturday 29. about two o'clock in the afternoon, being in latitude 2° 50' N., longitude 188° W. we croffed a great rippling, which stretched from the N. E. to the S. W. as far as the eye could reach from the mast head. We sounded, but had no bottom with a line of two hundred fathoms.

On Thursday, September 3. at five o'clock in the morning, we saw land bearing E. N. E. distant about five miles: in about half an hour we saw more land in the N. W. and at six, saw in the N. E. an Indian proa, such as is described in the account of Lord Anson's voyage. Perceiving that she stood towards us, we hoisted Spanish colours; but when she came within about two miles of us, she tacked, and stood from us to the N. N. W. and in a short time was out of sight.

At eight o'clock, the islands which I judged to be two of the Picadores, bore from S. W. by W. to W. and to windward, from N. by E. to N. E, and had the appearance of small keys. They were distant about three leagues; but many others, much farther off, were in sight. The latitude of one of those islands is 11° N. longitude 192° 30′ W.; and the other 11° 20′ N., longitude 192° 58′ W.

On Monday 7. we saw a curlieu and a pewit, and on the 9th we caught a land-bird, very much resembling a starling.

On Thursday 17. we saw two gannets, and judged the island of Tinian to bear W. at about one and thirty leagues distance; our latitude being 15° N. and our longitude 212° 30' W. At six o'clock the next morning, Friday 18. we saw the island of Saypan, bearing W. by N. distant about ten leagues. In the afternoon, we saw Tinian, and made sail for the road; where, at nine o'clock in the morning, of Saturday 19. we came to an anchor in two and twenty sathom, sandy ground, at about half a mile distant from the shore, and half a mile from the reef.

### CHAP. X.

Some Account of the present State of the Island of Tinian, and our Employment there; with what happened in the Run from thence to Batavia.

A S foon as the ship was secured, I sent the boats on shore to erect tents, and bring off some refreshments; and about noon they returned, with some cocoa-nuts, limes,

and oranges.

In the evening, the tents being erected, I sent the surgeon and all the invalids on shore, with two months provisions, of every kind, for forty men, the smiths forge, and
a chest of carpenter's tools. I then landed myself with the
first lieutenant, both of us being in a very sickly condition,
taking with us also a mate, and twelve men, to go up the
country and hunt for cattle.

When we first came to anchor, the N. part of the bay bore N. 39° W. Cocoa Point N. 7° W. the landing-place N. E. by N. and the S. end of the island S. 28° E.; but next morning, Sunday 20. the master having sounded all the bay, and being of opinion that there was a better situation to the southward, we warped the ship a little way up,

and moored with a cable each way.

At fix in the evening, the hunters brought in a fine young bull, of near four hundred weight: part of it we kept on shore, and sent the rest on board with bread fruit,

limes, and oranges.

Early the next morning. Monday 20. the carpenters were fet at work to caulk the ship all over, and put every thing in repair as far as possible. All the sails were also got on shore, and the sail makers employed to mend them: armourers at the same time were busy in repairing the iron-work, and making new chains for the rudder. The number of people now on shore, sick and well, was sifty-three.

In this place we got beef, pork, poultry, papaw apples, bread-fruit, limes, oranges, and every refreshment that is mentioned in the account of Lord Anson's voyage. The fick began to recover from the day they first went on shore: the air however, was so different here from what we found it in King George's Island, that slesh meat, which there kept sweet two days, could here be scarcely kept sweet

one,

oue. There had been many cocoa-nut trees near the landing place, but they had been all wastefully cut down for the fruit, and none being grown up in their stead, we were forced to go three miles into the country before a fingle nut could be procured. The hunters also suffered incredible fatigue, for they were frequently obliged to go ten or twelve miles through one continued thicket, and' the cattle were so wild that it was very difficult to come near them, so that I was obliged to relieve one party by another; and it being reported that cattle were more plenty at the north end of the island, but that the hunters being quite exhausted with fatigue when they got thither, were not able to kill them, much less to bring them down, I sent Mr Gore, with fourteen men, to establish themselves in that part of the island, and ordered that a boat should go every morning, at day break, to bring in what they hould kill. In the mean time, the ship was laid by the ftern to get at some of the copper sheathing which had been much torn; and in repairing the copper, the carpenter discovered and stopped a large leak under the lining of the knee of the head, by which we had reason to hope most of the water that the vessel had lately admitted in bad weather, came in. During our stay here, I ordered all the people on shore by turns, and by October 15. all the fick being recovered, our wood and water completed, and the ship made fit for the sea, we got every thing off the shore, and embarked all our men from the wateringplace, each having, at least five hundred limes, and there being several tubs full on the quarter deck, for every one to squeeze into his water as he should think fit.

At day-break, of Friday 16. we weighed, and sailed out of the bay, sending the boats at the same time to the north end of the island, to bring off Mr Gore and his hunters. At noon, we received them and their tents on board, with a fine large bull which they had just killed.

While we lay at anchor in this place, we had many obfervations for the latitude and longitude, from which we drew up the following table:

ate the epigrat and a reconstruction in the recoin of a reconstruction and

and the dual and the state - Manuface and the Receiver

Vol. I. 

Latitude of the ship, as she lay at anchor 14° 55' N. long. 314° 15' W. Latitude of the watering-place - - 1 59 N.

Longitude of the body of Tinian - 214 W.

Longitude of Tinian Road - - - 214 8 W.

Medium of longitude, observed at

Tinian, - - - - - 214 7

We continued a westerly course, inclining somewhat to the North, till Wednesday 21. when Tinian bearing S. 71° 40' E. distant 277 leagues, we saw many birds; and the next day, saw three, resembling gannets, of the same kind that we had seen when we were within about thirty

leagues of Tinian.

On Friday 23. we had much thunder, lightning, and rain, with strong gales and a great sea. The ship laboured very much, and the rudder being loofe again, shook the stern as much as ever. The next day, Saturday 24. we faw feveral small land birds, and the gales continuing, we split the gib and main top mast stay sail; the wind increafed all the remainder of the day, and all night, and on Sunday 25. it blew a storm. The fore fail and mizen fail were torn to pieces, and loft; and having bent others, we wore and stood under a reefed fore fail, and balanced mi-We had the mortification to find the ship admit more water than usual. We got the top gallant masts down upon the deck, and took the gib boom in; foon after which a sea struck the ship upon the bow, and washed away the round-houses, with all the rails of the head, and every thing that was upon the fore-castle: we were, however, obliged to carry as much fail as the ship would bear, being, by Lord Anson's account, very near the Bashee Islands, and, by Mr Byron's, not more than thirty-leagues, with a lee shore.

The next morning, Monday 29 we saw several ducks and shags, some small land-birds, and a great number of horse-slies about the ship; but had no ground with 160 fathom. The incessant and heavy rain had kept every man on board constantly wet to the skin for more than two days and two nights; the weather was still very dark, and the sea was continually breaking over the ship.

On Tuesday 27. the darkness, rain, and tempest continuing, a mountainous sea that broke over us, staved all the half-ports to pieces on the starboard side, broke all the iron stanchions on the gunwale, washed the boat off the

skids, and carried many things overboard. We had, however, this day, a gleam of sunshine, sufficient to determine our latitude, which we found to be 20° 50' N., and the ship appeared to be fifty minutes North of her reckoning.

The weather now became more moderate. At noon, on Wednesday 28. we altered our course, steering S. by W.; and at half an hour after one, we saw the Bashee Islands bearing from S. by E. to S. S. E. distant about fix leagues. These islands are all high, but the northermost is higher than the rest. By an observation made this day, we found Grafton Island to lie in the longitude of 239° W. and in latitude of 21.0 4' N. At midnight, the weather being very dark, with sudden gusts of wind, we missed Edmund Morgan, a marine taylor, whom we supposed to have fallen overboard, having reason to fear that he haddrunk more than his allowance.

Frum this time, till Tuesday, November 3. we found the ship every day from ten to fifteen miles north of her reckoning. The day before we had feen several gannets; but upon founding many times during the day and the next night, we had no ground with 160 fathom. This morning, at seven o'clock, we saw a ledge of breakers bearing S. W. at the distance of about three miles: we hauled off from them, and at eleven saw more breakers bearing S. W. by S distant about five miles. At noon, we hauled off the east end of them, from which we were not distant:

more than a quarter of a mile.

The first shoal lies in latitude 11° 8' N.; longitude,

from Bashee Islands, 8° W.

The second shoal lies in latitude 10° 46' N.; longitude

of the N. E. end from Bashee Islands, 8° 13' W.

We saw much foul ground to the S. and S. S. E. but had no bottom with 150 fathom. Before one, however, we saw shoal water on the larboard bow, and standing from it, passed another ledge at two. At three, we saw a low fandy point, which I called SANDY ISLE, bearing N. 1 E. distant about two miles. At five, we saw a small island, which I called SMALL KEY, bearing N. by E. distant about five miles; and soon after, another larger, which I called Long Island, beyond it. At fix in the evening; the largest island being distant between two and three leagues, we brought to, and stood off and on from mid-

night

night till break of day, continually founding, but having

th

n

m

li

f

t

no ground.

At seven in the morning, Wednesday 4. we saw another island, which I called New Island, bearing S. E. by E., and a large reef of rocks bearing S. W. distant six miles. At ten, we saw breakers from W. S. W. to W. by N. At noon, the north end of the great reef bore S. E. by E. distant two leagues, and another reef bore W. N. W. at about the same distance.

The latitudes and longitudes of these islands and shoals,

appear by the following table:

TOTAL TRANSPORT OF THE PARTY OF	MT 12.	Lat.	N.	Long.	W.
Sandy Isle -	4809	100	40'	2470	12'
Small Key -	•	10	37	247	16
Long Island -	•	10	20	247	24
New Island -		10	10	247	40
First Shoal -	•	- 10	14	247	36
Second Shoal -	and the	10	4	247	45
Third Shoal -	rie visin	10	5	247	50

Soon after we saw another reef in latitude 10° 15', lon-

gitude 248°.

200

The next day, Thursday 5. we found the ship, which had for some time been to the northward of her reckoning

eight miles to the fouthward.

We continued our course, often sounding, but finding no bottom. On Saturday 7. we passed through several ripplings of a current, and faw great quantities of driftwood, cocoa nut leaves, things like cones of firs, and weed which swam in a stream N. E. and S. W. We had now foundings at fixty-five fathom, with brown fand, small shells, and stones; and at noon, found the ship again to the northward of her reckoning ten miles, and had decreased our foundings to twenty-eight fathom, with the same Our latitude was 8° 36' N., longitude 253° W. At two o'clock, we faw the island of Condore, from the mast-head, bearing W. 1 N. At four, we had ground with twenty fathom; the island bearing from W. to N. by W. distant about thirteen leagues, and having the appearance of high hummocks. The latitude of this island is 8° 40' N.; longitude, by our reckoning, 254° 15'.

white most up ben the booth has you highwish

We now altered our course; and the next morning, Sunday 8. I took from the petty officers and seamen, all the log and journal books relative to the voyage.

On Tuesday 10. being in latitude 5° 20' N., longitude 255° W. we found a current setting four fathom an hour S. by W.; and during our course to the islands Timoun, Aros, and Pelang, which we law about fix in the afternoon of Friday 13. we were every day from 10 to 20 miles fouthward of our reckoning.

On Monday 16 at ten in the morning, we crossed the line again into South latitude, in longitude 255°; and foon after we faw two islands, one bearing S. by E. distant five leagues, and the other S. by W. distant seven

leagues.

8,

ed I.

The next morning, Tuefday 17. the weather became very dark and tempestuous, with heavy rain; we therefore clewed all up, and lay by till we could fee about us. The two islands proved to be Pulo Tote, and Pulo Weste; and having made fail till one o'clock, we faw the Seven Islands.

We continued our course till two the next morning, Wednesday 18. the weather being very dark, with heavy fqualls of wind, and much lightning and rain: While one of these blasts was blowing with all its violence, and the darkness was so thick that we could not see from one part of the ship to the other, we suddenly discovered, by a flash of lightning, a large vessel close a-board of us. The Acersman instantly put the helm a-lee, and the ship anfwering her rudder, we just cleared each other. This was the first ship we had seen since we parted with the Swallow; and it blew so hard, that not being able to underfland any thing that was faid, we could not learn to what nation she belonged.

At fix, the weather eleared up, we faw a fail at anchor in the E. S. E.; and at noon, we faw land in the W. N. W. which proved to be Pulo Taya, Pulo Tote bearing S. 35° E. Pulo Weste S. 13° E. At six in the evening, we anchored in 15 fathom, with fandy ground; and obferved a current running E. N. E. at the rate of five fa-

thom an hour.

At fix in the morning, Thursday 19. we weighed and made sail, and soon after saw two vessels a head; but at fix in the evening, finding that we lost much ground, we

came again to an anchor in fifteen fathom, with a fine

no

fandy bottom.

At fix o'clock the next morning, Friday 20. the current being flack, we have thort on the small bower, which foon after parted at a third from the clench. We immediately took in the cable, and perceived that, altho' we had founded with great care before we anchored, and found the bottom clear, it had been cut through by the rocks. After some time, the current becoming strong, a fresh gale springing up, and the ship being a great way to the leeward, I made sail, in hopes to get up and recover the anchor; but I found at last that it was impossible, without anchoring again; and being afraid of the consequences of doing that in foul ground, I determined to stand on, especially as the weather was become squally.

We were, however, able to make very little way till the next day, when, about three in the afternoon, we faw Monopin Hill bearing S & E. and advancing very little, faw the coast of Sumatra at half an hour after fix the next morning, Sunday 22. We continued to suffer great delay by currents and calms, but on Monday, November 30.

we anchored in Batavia Road.

## CHAP. XI.

Day.

the ship's company together, and told them that I would not suffer any liquor to come on board, and would severely punish those who should attempt to bring any: and I took some pains to reconcile them to this regulation, by assuring them that in this country intemperance would inevitably destroy them. As a surther preservative, I suffered not a man to go on shore, except those who were upon duty; and took care than none even of these straggled into the town.

On Wednesday 2. I sent the boatswain and the carpenter, with the carpenter of the Falmonth, to look at such of her stores as had been landed at Onrust, with orders, that if any were fit for our use they should be bought. their return, they informed me that all the stores they had feen were rotten, and unfit for use, except one pair of tacks, which they brought with them: the masts, yards, and cables were all dropping to pieces, and even the iron work was fo rufty that it was worth nothing. They also went on board the Falmouth to examine her hulk, and found her in so shattered a condition, that in their opinion she could not be kept together during the next monfoon. Many of her ports were washed into one, the stern-post was quite decayed, and there was no place in her where a man could be sheltered from the weather. The few people who belonged to her were in as bad a state as their vessel, being quite broken and worn down, and expecting to be drowned as foon as the monfoon should set in.

Among other necessaries we were in want of an anchor, having lost two, and of three inch rope for rounding the cables; but the officers whom I had sent to procure these articles, reported, that the price which had been demanded for them was so exorbitant, that they had not agreed to give it. On Saturday 5. therefore, I went on shore myself, for the first time, and visited the different storehouses and arsenals, but found it impossible to make a better bargain than my officers. I suspected that the dealers took advantage of our apparent necessity, and supposing that we could not sail without what we had offered to purchase, determined to extort from us more than four times its value. I was, however, resolved to make any shift rather than submit to what I thought a shameful imposition, and therefore told them that I should certainly sail on the

next

mext Tuesday; that if they would agree to my terms in the mean time, I would take the things I had treated for; if not, that I would sail without them.

Soon after I returned on board, I received a petition from the Warrant Officers of the Falmouth, representing; that there was nothing for them to look after: that the gunner had been long dead, and his stores spoiled, particularly the powder, which, by order of the Dutch, had been thrown into the sea: that the boatswain, by vexition and diffress, had loft his senses, and was then a deplorable object in a Dutch hospital: that all his stores had been fong spoiled and rotten, the roof of the store-house having fallen in during a wet monfoon, and left them exposed many months, all endeavours to procure another place to put them in being ineffectual: that the carpenter was in a dying condition, and the cook a wounded cripple. For these reasons, they requested that I would take them home; or at least difmiss them from their charge. It was with the greatest regreat and compassion that I told these unhappy people it was not in my power to relieve them, and that as they had received charge of stores, they must wait orders from home. They replied, that they had never received a fingle order from England fince they had been left here, and earnestly intreated that I would make their diffress known, that it might be relieved. They had, they faid, ten years pay due, in the expectation of which they were grown old, and which now they would be content to forfeit, and go home sweepers, rather than continue to suffer the miseries of their present situation, which were indeed very great. They were not suffered to spend a fingle night on thore, whatever was their condition, and when they were fick, no one visited them on board; they were, belides, robbed by the Malays, and in perpetual dread of being destroyed by them, as they had a short time before burnt the Siam prize. I assured them that I would do my utmost to procure them relief, and they left me with tears in their eyes.

As I heard nothing more of the anchor and rope for which I had been in treaty, I made all ready for sea. The ship's company had continued healthy and sober, and been served with fresh beef every day, from the time of our first coming to an anchor in the Road; we had also some beef,

and a live ox, to carry out with us. We had now only one man upon the fick lift, except a seaman, who had been afflicted with the rheumatic pains ever since our leaving the Streight of Magellan: and at six o'clock in the morning, Tuesday, December 8. after a stay of just one week, we set sail.

On Friday 11. at noon, we were off a small island called the Cap, between the coast of Sumatra and Java, and several of our people sell down with colds and sluxes. The next day, Saturday 12. a Dutch boat came on board, and sold us some turtle, which was served to the ship's company. At night, being at the distance of about two miles from the Java shore, we saw an incredible number of lights upon the beach, which we supposed were intended to draw the sish near it, as we had seen the same appearance at other places.

On Monday 14. we anchored off Prince's Island, and began to take in wood and water. The next morning, Tuesday 15. the natives came in with turtle, poultry, and hog deer, which we bought at a reasonable price. We continued here, sitting the ship for the sea, till Saturday 19. during which time many of the people began to complain of intermitting disorders, something like an ague. At six o'clock the next morning, Sunday 20. having completed our wood, and taken on board seventy six tons of water,

we made fail.

While we lay here, one of the seamen fell from the mainyard into the barge, which lay along fide the ship. body was dreadfully bruised, and many of his bones were broken: it happened also, that in his fall he struck two other men, one of whom was so much hurt that he continued speechless till Thursday 24. and then died, though the other had only one of his toes broken. We had now no less than fixteen upon the fick lift, and by Friday, January 1. the number was increased to forty; we had buried three, among whom was the quarter-master, George Lewes, who was a diligent fober man, and the more useful, as he spoke both the Spanish and Portuguese languages. The diseases by which we suffered, were fluxes, and fevers of the putrid kind, which are always contagious, and for that reason alone, would be more fatal on board a ship than any other. The furgeon's mate was very foon laid up,

and those who were appointed to attend the sick, were aswas taken ill in a day or two after they had been upon To remedy this evil, as much as it was in that service. my power, I made a very large birth for the fick, by removing a great number of people from below to the half deck, which I hung with painted canvass, keeping it constantly clean, and directing it to be washed with vinegar, and fumigated once or twice a day. Our water was well talted, and was kept constantly ventilated; a large piece of iron also, used for the melting of tar, and called a logerhead, was heated red hot, and quenched in it before it was given out to be drank. The fick had also wine instead of grog, and salep or sago every morning for breakfast: two days in a week they had mutton broth, and had a fowl or two given them on the intermediate days; they had befides, plenty of rice and fugar, and frequently malt meshed; fo that perhaps people in a fickly ship had never so many refreshments before: the surgeon also was indefatigable; yet, with all these advantages, the sickness gained ground. In the mean time, to aggravate our misfortune, the ship made more than three feet of water in a watch; and all her upper works were very open and loofe.

By Sunday 10. the sickness began to abate, but more than half the ships company were so feeble, that they could scarcely crawl about. On this day, being in latitude 22° 41' S, longitude, by account, 300° 47' W. we saw many

tropic birds about the ship.

On Sunday 17. being in latitude 27° 32' S., longitude 301° 36' W., we saw feveral albatrosses, and caught some bonettas. The ship was this day ten miles to the southward of her account.

On Sunday 24. in latitude 33° 40' S., longitude, by account, 328° 17' W., we met with a violent gale, which split the main top sail and the main top-mast-stay sail all to pieces. The sea broke over the ship in a dreadful manner, the starboard rudder chain was broken, and many of the booms were washed overboard. During the storm we saw several birds and butterssies; and our first attention, after it subsided, was to dry the bedding of the sick: at the same time, every one on board who could handle a needle was employed in repairing the sails, which were now in a shattered condition.

On Tuesday 26. and Wednesday 27. being in latitude 4° 16', and becalmed, we had several observations, by which we determined the longitude of the ship to be 323° 10'; and it appeared that we were several degrees to the Eastward of our reckoning.

At fix in the evening, Saturday 30. we saw land, and on Thursday, February 4. we anchored in Table Bay, at

the Cape of Good Hope.

Our run from Prince's Island to the Cape was, by our reckoning, 89° longitude, which makes the longitude of the Cape 345° W.; but the longitude of the Cape being, by observation, 342° 4', it appeared that the ship was 3° to the Eastward of her reckoning.

## CHAP. XII.

An Account of our Transactions at the Cape of Good Hope, and of the Return of the Dolphin to England.

A S soon as the ship was at anchor, I sent an officer on shore, with the usual compliments to the Governor, who received him with great civility, telling him that we were welcome to all the refreshments and assistance that the Cape afforded, and that he would return our salute with

the same number of guns.

We found riding here a Dutch Commodore, with fixteen sail of Dutch East Indiamen, a French East India ship, and the Admiral Watson, Capt. Arissin, an East-India packet boat, for Bengal. We saluted the Governor with thirteen guns, and he returned the same number; the Admiral Watson saluted us with eleven guns, and we returned nine; the French ship afterwards saluted us with nine guns, and we returned seven.

Having got off some mutton for the ship's company, with plenty of greens, I sent the surgeon on shore to hire quarters for the sick, but he could procure none for less than two shillings a day, and a stipulation to pay more, if any of them should take the small pox, which was then in almost every house, in proportion to the malignity of the disease. The first expence being great, and it appearing, upon inquiry, that many of our people had never had the

fmall-pox, so that the increase was likely to be considerable, besides the danger, I requested the Governor's permission to erect a tent upon a spacious plain, at about two miles distance from the town, called Green Point, and to send my people on shore thither during the day, under the care of an officer, to prevent their straggling. This permission the Governor immediately granted, and gave orders that

they should suffer no molestation.

In this place, therefore, I ordered tents to be erected, and the furgeon and his mate, with proper officers to attend; at the same time strictly charging that no man should be suffered to go into the town, and that no liquor should be brought to the tents. All the sick, except two, left the ship early in the morning, with their provisions and firing: and for those that were reduced to great weakness, I ordered the furgeon to procure such extraordinary provisions as he should think proper, particularly milk, though it was fold at an excessive price. About six in the evening they returned on board. And seemed to be greatly refreshed. At the same time, being extremely ill myself, I was obliged to be put on shore, and carried about eight miles up the country, where I continued all the time the ship lay here; and when the was ready to fail, returned on board without having received the least benefit.

No time, however, was lost in refitting the vessel: the sails were all unbent, the yards and top-masts struck, the forge was set up, the carpenters were employed in caulking, the sail-makers in mending the sails, the cooper in repairing the casks, the people in overhauling the rigging,

and the boats in filling water.

By Wednesday 10. the heavy work being nearly dispatched, twenty of the men who had had the small pox, were permitted to go ashore at the town, and others, who were still liable to the distemper, were landed at some distance, with orders to go into the country, and return in the evening, which they punctually obeyed: this liberty, therefore, was continued to them all the while the vessel lay at this port, which produced so good an effect, that the ship's company, except the sick, who recovered very fast, had a more healthy and vigorous appearance than when they left England. We purchased here the necessaries that we endeavoured to procure at Batavia, at a reasonable price, besides

Vol. I

besides canvas and other stores; we also procured fresh water by distilation, principally to shew the captains of the Indiamen, and their officers, that, upon an emergency, wholesome water might be procured at sea. At five o'clock in the morning, we put fifty fix gallons of falt water into the still, at seven it began to run, and in about five hours and a quarter afforded us two and forty gallons of fresh water, at an expence of nine pounds of wood, and fixty nine pounds of coals. Thirteen gallons and two quarts remained in the still, and that which came off had no ill taste, nor, as we had often experienced, any hurtful quality. thought the shewing this experiment of the more consequence, as the being able to allow plenty of water not only for drink, but for boiling any kind of provision, and even for making tea and coffee, especially during long voyages, and in hot climates, conduces greatly to health, and is the means of faving many lives. I never once put my people to an allowance of water during this whole voyage, always using the still when we were reduced to five and forty tons, and preserving the rain water with the utmost diligence. I did not, however, allow water to be fetched away at pleasure, but the officer of the watch had orders to give such as brought provisions of any kind, water sufficient to dress it, and a proper quantity also to such as brought tea and coffee.

On Thursday 25. the wood and water being nearly completed, and the ship almost ready for the sea, I ordered every body to go on board, and the fick tents to be brought off; the people being so well recovered, that in the whole ship's company there were but three men unable to do duty, and happily, fince our leaving Batavia, we had lost but three. The next day, Friday 26. and the day following, Saturday 27. the carpenters finished caulking all the outworks, the fore-castle, and the main-deck; we got all our bread on board from the shore, with a considerable quantity of straw, and thirty-four sheep for seastores. In the mean time I came on board, and having unmoored, lay waising for a wind till the evening of Thursday, March 3. when a breeze springing up, we got under fail. While we were on shore at Green Point, we had an opportunity of making many celestial observations, by which, we determined Table Bay to lie in latitude 34°

2' S., longitude, from Greenwich, 18° 8' E. The variation of the needle, at this place, was 19° 30' W.

On Monday 7. being in latitude 29° 33' S., longitude, by account, 347° 38', the ship was eight miles to the Northward of her dead reckoning.

On Sunday 13. having sailed westward 360° from the meridian of London, we had lost a day; I therefore called the latter part of this day, Monday, March, 14.

At fix o'clock in the evening, Wednesday 16. we saw the Island of St Helena, at the distance of about fourteen leagues; and at one the next morning, Thursday 17. brought to. At break of day, we made fail for the island, and at nine, anchored in the bay. The fort faluted us with thirteen guns, and we returned the same number. We found riding here the Northumberland Indiaman, Captain Milford, who saluted us with eleven guns, and we returned nine. We got out all the boats as soon as possible, and fent the empty casks to be filled with water; at the same time several of the people were employed to gather purflain, which grows here in great plenty. About two o'clock, I went on shore myself, and was saluted by the fort with thirteen guns, which I returned. The governor and the principal gentlemen of the island did me the honour to meet me at the water-side, and having conducted me to the fort, told me, that it was expected I should make it my home during my stay.

By noon the next day, Friday 18. our water was completed, and the ship was made ready for sea; soon after, she was unmoored, to take advantage of the first breeze, and at five in the afternoon, I returned on board. Upon my leaving the shore, I was saluted with thirteen guns, and soon after, upon getting under way, I was saluted with thirteen more, both which I returned; the Northumberland Indiaman then saluted me with thirteen guns, so did the Osterley, which arrived here the evening before I made sail, and I returned the compliment with the same

number.

On Monday 21. in the evening, we saw several men of war birds; and at midnight, heard many birds about the ship. At five o'clock in the morning, Wednesday 23. we saw the island of Ascension; and at eight, discovered a ship to the eastward, who brought to, and hoisted a jack

lours, and she then stood in for the land again. We ran down close along the north east-side of the island, and looked into the bay, but seeing no ship there, and it blowing a stiff gale, I made the best of my way.

On Monday 28. we crossed the equator, and got again

into north latitude.

On Wednesday, April 13. we passed a great quantity of gulph weed; and on Sunday 17. we passed a great deal more. On Tuesday 19. we saw two slocks of birds, and observing the water to be discoloured, we thought the ground might be reached, but, upon sounding, could find no bottom.

At five o'clock in the morning of Sunday 24. we saw the peak of the island of Pico bearing N. N. E at the distance of about eighteen leagues. We found, by observation, that Fayal lies in latitude 38° 20' N. longitude 20° 30' W. from London.

No incident worth recording happened till about noon on Wednesday, May 21. when, being in latitude 48° 44' N., longitude 7° 16' W. we saw a ship in chace of a sloop, at which she fired several guns. We bore away, and at three, fired a gun at the chace, and brought her to; the ship to windward, being near the chace, immediately sent a boat on board her, and soon after, Captain Hammond, of his Majesty's sloop the Savage, came on board of me, and told me, that the vessel he had chaced, when he sirst faw her, was in company with an Irish wherry, and that as foon as they discovered him to be a man of war, they took different ways; the wherry hauled the wind, and the other vessel bore away. That he at first hauled the wind, and stood away after the wherry, but finding that he gained no ground, he bore away after the other vessel, which probably would also have escaped, if I had not stopped her, for that he gained very little ground in the chace. She appeared to be laden with tea, brandy, and other goods, from Roscoe in France; and though she was steering a south west course, pretended to be bound to Bergen in Norway. She belonged to Liverpool, was called the Jenny, and commanded by one Robert Christian. Her brandy and tea were in small kegs and bags; and

all appearances being strongly against her, I detained her,

in order to be fent to England.

At half an hour after five, on Friday 13. we saw the islands of Scilly; on Thursday 19. I landed at Hastings in Sussex; and at four the next morning, Friday 20. the ship anchored safely in the Downs, it being just 637 days since her weighing anchor in Plymouth Sound. To this narrative, I have only to add, that the object of the vovage being discovery, it was my constant practice, during the whole time of my navigating those parts of the sea which are not perfectly known, to lie to every night, and make sail only in the day, that nothing might escape me.
